Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from www.ams.org/journals/. Subscription prices for Volume 76 (2007) are as follows: for paper delivery, \$486 list, \$389 institutional member, \$437 corporate member, \$316 member of CBMS organizations; \$292 individual member; for electronic delivery, \$437 list, \$350 institutional member, \$393 corporate member, \$284 member of CBMS organizations, \$262 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$18 for surface delivery outside the United States and India; \$19 to India. Expedited delivery to destinations in North America is \$27; elsewhere \$56.

Back number information. For back issues see the www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

CONTENTS

Vol. 76, No. 260

October 2007

Douglas N. Arnold, Richard S. Falk, and Ragnar Winther, Mixed finite element methods for linear elasticity with weakly imposed symmetry	1699
Alan Demlow, Sharply localized pointwise and W_∞^{-1} estimates for finite element methods for quasilinear problems	1725
Annalisa Buffa and Snorre H. Christiansen, A dual finite element complex on the barycentric refinement	1743
Jun Hu and Zhong-Ci Shi, Two lower order nonconforming rectangular elements for the Reissner-Mindlin plate	1771
Aaron Solo, Sharp estimates for finite element approximations to elliptic problems with Neumann boundary data of low regularity	1787
S. Pernet and X. Ferrieres, HP a-priori error estimates for a non-dissipative spectral discontinuous Galerkin method to solve the Maxwell equations in the time domain	1801
Tomáš Vejchodský and Pavel Šolín, Discrete maximum principle for higher-order finite elements in 1D	1833
Sören Bartels and Andreas Prohl, Constraint preserving implicit finite element discretization of harmonic map flow into spheres	1847
Guy Barles and Espen R. Jakobsen, Error bounds for monotone approximation schemes for parabolic Hamilton-Jacobi-Bellman equations ...	1861
Ivan P. Gavriluk and Volodymyr L. Makarov, An exponentially convergent algorithm for nonlinear differential equations in Banach spaces	1895
Björn Sjögreen, Katarina Gustavsson, and Reynir Levi Gudmundsson, A model for peak formation in the two-phase equations	1925
Philippe Chartier, Ernst Hairer, and Gilles Vilmart, Numerical integrators based on modified differential equations	1941
Daan Huybrechs and Stefan Vandewalle, The construction of cubature rules for multivariate highly oscillatory integrals	1955
Gašper Jaklič, Jernej Kozak, Marjeta Krajnc, and Emil Žagar, On geometric interpolation by planar parametric polynomial curves	1981
Yves Tourigny and Nigel P. Smart, A multidimensional continued fraction based on a high-order recurrence relation	1995
Dante Manna and Victor H. Moll, Rational Landen transformations on \mathbb{R}	2023
Eugenio P. Balanzario and Jorge Sánchez-Ortiz, Zeros of the Davenport-Heilbronn counterexample	2045
Jeffrey Stopple, Computing L -functions with large conductor	2051
Ariel Pacetti, On the embedding problem for 2^+S_4 representations	2063
Josef Dick, The construction of extensible polynomial lattice rules with small weighted star discrepancy	2077
Richard J. McIntosh and Eric L. Roettger, A search for Fibonacci-Wieferich and Wolstenholme primes	2087
Zhenxiang Zhang, Two kinds of strong pseudoprimes up to 10^{36}	2095

Pace P. Nielsen , Odd perfect numbers have at least nine distinct prime factors	2109
David Brink , Prime decomposition in the anti-cyclotomic extension	2127
R. de Haan, M. J. Jacobson, Jr., and H. C. Williams , A fast, rigorous technique for computing the regulator of a real quadratic field	2139
Reinier Bröker and Peter Stevenhagen , Efficient CM-constructions of elliptic curves over finite fields	2161
M’Hammed El Kahoui and Said Rakrak , Structure of Gröbner bases with respect to block orders	2181
Komei Fukuda, Anders N. Jensen, and Rekha R. Thomas , Computing Gröbner fans	2189
Kamal Khuri-Makdisi , Asymptotically fast group operations on Jacobians of general curves	2213
Kevin G. Hare , New techniques for bounds on the total number of prime factors of an odd perfect number	2241
Kevin A. Broughan and A. Ross Barnett , Corrigendum to “The holomorphic flow of the Riemann zeta function”	2249
Huo-Yuan Duan, Shao-Qin Gao, Roger C. E. Tan, and Shangyou Zhang , Errata to “A generalized BPX multigrid framework covering nonnested V-cycle methods”	2251
Reviews and Descriptions of Tables and Books	2253
Z. Chen, G. Huan, and Y. Ma 6 , Per Christian Hansen, James G. Nagy, and Dianne P. O’Leary 7	

INDEX TO VOLUME 76 (2007)

- Adimurthi, Siddhartha Mishra, and G. D. Veerappa Gowda. *Convergence of Godunov type methods for a conservation law with a spatially varying discontinuous flux function*, 1219
- Allouche, Jean-Paul, Christiane Frougny, and Kevin G. Hare. *On univoque Pisot numbers*, 1639
- Amara, M., D. Capatina-Papaghiuc, and D. Trujillo. *Stabilized finite element method for Navier–Stokes equations with physical boundary conditions*, 1195
- Ammari, Habib, Roland Griesmaier, and Martin Hanke. *Identification of small inhomogeneities: Asymptotic factorization*, 1425
- Arnold, Douglas N., Richard S. Falk, and Ragnar Winther. *Mixed finite element methods for linear elasticity with weakly imposed symmetry*, 1699
- Arroyo, Daniel, Alexei Bespalov, and Norbert Heuer. *On the finite element method for elliptic problems with degenerate and singular coefficients*, 509
- Assmann, Björn, and Bettina Eick. *Testing polycyclicity of finitely generated rational matrix groups*, 1669
- Avelin, Helen. *Deformation of $\Gamma_0(5)$ -cusp forms*, 361
- Bai, Zhong-Zhi, Gene H. Golub, and Chi-Kwong Li. *Convergence properties of preconditioned Hermitian and skew-Hermitian splitting methods for non-Hermitian positive semidefinite matrices*, 287
- Balanzario, Eugenio P., and Jorge Sánchez-Ortiz. *Zeros of the Davenport-Heilbronn counterexample*, 2045
- Baragar, Arthur, and Ronald van Luijk. *$K3$ surfaces with Picard number three and canonical vector heights*, 1493
- Barles, Guy, and Espen R. Jakobsen. *Error bounds for monotone approximation schemes for parabolic Hamilton-Jacobi-Bellman equations*, 1861
- Barnett, A. Ross. *See Broughan, Kevin A.*
- Bartels, Sören, and Andreas Prohl. *Constraint preserving implicit finite element discretization of harmonic map flow into spheres*, 1847
- Beck, Michael, Eric Pine, Wayne Tarrant, and Kim Yarbrough Jensen. *New integer representations as the sum of three cubes*, 1683
- Beltrán, C., and L. M. Pardo. *On the probability distribution of condition numbers of complete intersection varieties and the average radius of convergence of Newton's method in the underdetermined case*, 1393
- Bernstein, Daniel J. *Proving primality in essentially quartic random time*, 389
- Bernstein, Daniel J., Hendrik W. Lenstra, Jr., and Jonathan Pila. *Detecting perfect powers by factoring into coprimes*, 385
- Bernstein, Daniel J., and Jonathan P. Sorenson. *Modular exponentiation via the explicit Chinese remainder theorem*, 443
- Berthon, Christophe, and Frédéric Coquel. *Nonlinear projection methods for multi-entropies Navier–Stokes systems*, 1163
- Bespalov, Alexei. *See Arroyo, Daniel*
- Bittner, Kai, and Karsten Urban. *On interpolatory divergence-free wavelets*, 903
- Bramble, James H., and Joseph E. Pasciak. *Analysis of a finite PML approximation for the three dimensional time-harmonic Maxwell and acoustic scattering problems*, 597
- Brenner, Susanne C., Fengyan Li, and Li-yeng Sung. *A locally divergence-free nonconforming finite element method for the time-harmonic Maxwell equations*, 573
- Brent, Richard, Colin Percival, and Paul Zimmermann. *Error bounds on complex floating-point multiplication*, 1469
- Brink, David. *Prime decomposition in the anti-cyclotomic extension*, 2127
- Bröker, Reinier, and Peter Stevenhagen. *Efficient CM-constructions of elliptic curves over finite fields*, 2161
- Broughan, Kevin A., and A. Ross Barnett. *Corrigendum to “The holomorphic flow of the Riemann zeta function”*, 2249
- Brown, Nathaniel P. *Quasi-diagonality and the finite section method*, 339
- Buffa, Annalisa, and Snorre H. Christiansen. *A dual finite element complex on the barycentric refinement*, 1743
- Burman, Erik, and Alexandre Ern. *Continuous interior penalty hp-finite element methods for advection and advection-diffusion equations*, 1119
- Caira, R., and F. Dell’Accio. *Shepard–Bernoulli operators*, 299

- Calkin, Neil, Jimena Davis, Kevin James, Elizabeth Perez, and Charles Swannack. *Computing the integer partition function*, 1619
- Capatina-Papaghiuc, D. *See Amara, M.*
- Celiker, Fatih, and Bernardo Cockburn. *Superconvergence of the numerical traces of discontinuous Galerkin and Hybridized methods for convection-diffusion problems in one space dimension*, 67
- Cerri, Jean-Paul. *Euclidean minima of totally real number fields: Algorithmic determination*, 1547
- Chartier, Philippe, Ernst Hairer, and Gilles Vilmart. *Numerical integrators based on modified differential equations*, 1941
- Chen, Long, Pengtao Sun, and Jinchao Xu. *Optimal anisotropic meshes for minimizing interpolation errors in L^p -norm*, 179
- Chishiki, Yusuke, Takeshi Goto, and Yasuo Ohno. *On the largest prime divisor of an odd harmonic number*, 1577
- Christiansen, Snorre H. *See Buffa, Annalisa*
- Cockburn, Bernardo. *See Celiker, Fatih*
- Coquel, Frédéric. *See Berthon, Christophe*
- Cucker, Felipe, Huaian Diao, and Yimin Wei. *On mixed and componentwise condition numbers for Moore–Penrose inverse and linear least squares problems*, 947
- Dabbaghian-Abdoly, Vahid. *Constructing representations of higher degrees of finite simple groups and covers*, 1661
- Dahmen, Wolfgang, Helmut Harbrecht, and Reinhold Schneider. *Adaptive methods for boundary integral equations: Complexity and convergence estimates*, 1243
- Davis, Jimena. *See Calkin, Neil*
- Deaño, Alfredo, and Javier Segura. *Transitory minimal solutions of hypergeometric recursions and pseudoconvergence of associated continued fractions*, 879
- Dell’Accio, F. *See Caira, R.*
- Dembélé, Lassina. *Quaternionic Manin symbols, Brandt matrices, and Hilbert modular forms*, 1039
- Demlow, Alan. *Local a posteriori estimates for pointwise gradient errors in finite element methods for elliptic problems*, 19
- . *Sharply localized pointwise and W_∞^{-1} estimates for finite element methods for quasilinear problems*, 1725
- Diao, Huaian. *See Cucker, Felipe*
- Dick, Josef. *The construction of extensible polynomial lattice rules with small weighted star discrepancy*, 2077
- Didenko, V., and E. Venturino. *Approximation methods for the Muskhelishvili equation on smooth curves*, 1317
- Diem, C. *See Gaudry, P.*
- Don, W. S. *See Min, M. S.*
- Duan, Huo-Yuan, Shao-Qin Gao, Roger C. E. Tan, and Shangyou Zhang. *A generalized BPX multigrid framework covering nonnested V-cycle methods*, 137
- . *Errata to “A generalized BPX multigrid framework covering nonnested V-cycle methods”*, 2251
- Dupont, Todd F., and Yingjie Liu. *Back and forth error compensation and correction methods for semi-Lagrangian schemes with application to level set interface computations*, 647
- Eick, Bettina. *See Assmann, Björn*
- El Kahoui, M’Hammed, and Said Rakrak. *Structure of Gröbner bases with respect to block orders*, 2181
- Elling, Volker. *A Lax–Wendroff type theorem for unstructured quasi-uniform grids*, 251
- Ern, Alexandre. *See Burman, Erik*
- Falk, Richard S. *See Arnold, Douglas N.*
- Feng, Xiaobing, Yinnian He, and Chun Liu. *Analysis of finite element approximations of a phase field model for two-phase fluids*, 539
- Feng, Xiaobing, and Ohannes A. Karakashian. *Fully discrete dynamic mesh discontinuous Galerkin methods for the Cahn–Hilliard equation of phase transition*, 1093
- Ferrieres, X. *See Pernet, S.*

- Floater, Michael S., and Tom Lyche. *Two chain rules for divided differences and Faà di Bruno's formula*, 867
- Frougny, Christiane. *See Allouche, Jean-Paul*
- Fukuda, Komei, Anders N. Jensen, and Rekha R. Thomas. *Computing Gröbner fans*, 2189
- Gantumur, Tsogtgerel, Helmut Harbrecht, and Rob Stevenson. *An optimal adaptive wavelet method without coarsening of the iterands*, 615
- Gao, Shao-Qin. *See Duan, Huo-Yuan*
- Garunkštis, Ramūnas, and Jörn Steuding. *On the distribution of zeros of the Hurwitz zeta-function*, 323
- Gaudry, P., E. Thomé, N. Thériault, and C. Diem. *A double large prime variation for small genus hyperelliptic index calculus*, 475
- Gavrilyuk, Ivan P., and Volodymyr L. Makarov. *An exponentially convergent algorithm for nonlinear differential equations in Banach spaces*, 1895
- Gil, Amparo, Javier Segura, and Nico M. Temme. *Numerically satisfactory solutions of hypergeometric recursions*, 1449
- Golub, Gene H. *See Bai, Zhong-Zhi*
- González, C., and M. Thalhammer. *A second-order Magnus-type integrator for quasi-linear parabolic problems*, 205
- Goto, Takeshi. *See Chishiki, Yusuke*
- Gowda, G. D. Veerappa. *See Adimurthi*
- Griebel, Michael, Karl Scherer, and Marc Alexander Schweitzer. *Robust norm equivalencies for diffusion problems*, 1141
- Griesmaier, Roland. *See Ammari, Habib*
- Gudmundsson, Reynir Levi. *See Sjögreen, Björn*
- Gustavsson, Katarina. *See Sjögreen, Björn*
- de Haan, R., M. J. Jacobson, Jr., and H. C. Williams. *A fast, rigorous technique for computing the regulator of a real quadratic field*, 2139
- Hairer, Ernst. *See Chartier, Philippe*
- Hanke, Martin. *See Ammari, Habib*
- Harbrecht, Helmut. *See Dahmen, Wolfgang*
- . *See Gantumur, Tsogtgerel*
- Hare, Kevin G. *New techniques for bounds on the total number of prime factors of an odd perfect number*, 2241
- . *See Allouche, Jean-Paul*
- He, Yinnian. *See Feng, Xiaobing*
- He, Yinnian, and Weiwei Sun. *Stabilized finite element method based on the Crank–Nicolson extrapolation scheme for the time-dependent Navier–Stokes equations*, 115
- Heuer, Norbert. *See Arroyo, Daniel*
- Hinrichs, Aicke, and Erich Novak. *Cubature formulas for symmetric measures in higher dimensions with few points*, 1357
- Holden, H., K. H. Karlsen, and N. H. Risebro. *Convergent difference schemes for the Hunter–Saxton equation*, 699
- Hoste, Jim, and Patrick D. Shanahan. *Computing boundary slopes of 2-bridge links*, 1521
- Hu, Jun, and Zhong-Ci Shi. *Two lower order nonconforming rectangular elements for the Reissner–Mindlin plate*, 1771
- Huybrechs, Daan, and Stefan Vandewalle. *The construction of cubature rules for multivariate highly oscillatory integrals*, 1955
- Jacobson, M. J., Jr. *See de Haan, R.*
- Jaklič, Gašper, Jernej Kozak, Marjeta Krajnc, and Emil Žagar. *On geometric interpolation by planar parametric polynomial curves*, 1981
- Jakobsen, Espen R. *See Barles, Guy*
- James, Kevin. *See Calkin, Neil*
- Jensen, Anders N. *See Fukuda, Komei*
- Jensen, Kim Yarbrough. *See Beck, Michael*
- Joe, Stephen. *See Sinescu, Vasile*

Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

Submission information. See **Information for Authors** at the end of this issue.

Publisher Item Identifier. The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

Postings to the AMS website. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from www.ams.org/journals/. Subscription prices for Volume 76 (2007) are as follows: for paper delivery, \$486 list, \$389 institutional member, \$437 corporate member, \$316 member of CBMS organizations; \$292 individual member; for electronic delivery, \$437 list, \$350 institutional member, \$393 corporate member, \$284 member of CBMS organizations, \$262 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$18 for surface delivery outside the United States and India; \$19 to India. Expedited delivery to destinations in North America is \$27; elsewhere \$56.

Back number information. For back issues see the www.ams.org/bookstore.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

Copying and reprinting. Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to reprint-permission@ams.org.

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

Mathematics of Computation is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 76, No. 257

January 2007

Wang Ming and Jinchao Xu, Nonconforming tetrahedral finite elements for fourth order elliptic equations	1
Alan Demlow, Local a posteriori estimates for pointwise gradient errors in finite element methods for elliptic problems	19
Kwang Y. Kim, A posteriori error analysis for locally conservative mixed methods	43
Fatih Celiker and Bernardo Cockburn, Superconvergence of the numerical traces of discontinuous Galerkin and Hybridized methods for convection-diffusion problems in one space dimension	67
JaEun Ku, A least-squares method for second order noncoercive elliptic partial differential equations	97
Yinnian He and Weiwei Sun, Stabilized finite element method based on the Crank–Nicolson extrapolation scheme for the time-dependent Navier–Stokes equations	115
Huo-Yuan Duan, Shao-Qin Gao, Roger C. E. Tan, and Shangyou Zhang, A generalized BPX multigrid framework covering nonnested V-cycle methods	137
Pingbing Ming and Pingwen Zhang, Analysis of the heterogeneous multiscale method for parabolic homogenization problems	153
Long Chen, Pengtao Sun, and Jinchao Xu, Optimal anisotropic meshes for minimizing interpolation errors in L^p -norm	179
C. González and M. Thalhammer, A second-order Magnus-type integrator for quasi-linear parabolic problems	205
Bishnu P. Lamichhane and Barbara I. Wohlmuth, Biorthogonal bases with local support and approximation properties	233
Volker Elling, A Lax–Wendroff type theorem for unstructured quasi-uniform grids	251
Mihály Kovács, On the convergence of rational approximations of semigroups on intermediate spaces	273
Zhong-Zhi Bai, Gene H. Golub, and Chi-Kwong Li, Convergence properties of preconditioned Hermitian and skew-Hermitian splitting methods for non-Hermitian positive semidefinite matrices	287
R. Caira and F. Dell’Accio, Shepard–Bernoulli operators	299
Ramūnas Garunkštis and Jörn Steuding, On the distribution of zeros of the Hurwitz zeta-function	323
Nathaniel P. Brown, Quasi-diagonality and the finite section method ...	339
Helen Avelin, Deformation of $\Gamma_0(5)$ -cusp forms	361
Daniel J. Bernstein, Hendrik W. Lenstra, Jr., and Jonathan Pila, Detecting perfect powers by factoring into coprimes	385
Daniel J. Bernstein, Proving primality in essentially quartic random time	389
Bernd C. Kellner, On irregular prime power divisors of the Bernoulli numbers	405
Daniel J. Bernstein and Jonathan P. Sorenson, Modular exponentiation via the explicit Chinese remainder theorem	443

Stéphane R. Louboutin , Efficient computation of root numbers and class numbers of parametrized families of real abelian number fields	455
P. Gaudry, E. Thomé, N. Thériault, and C. Diem , A double large prime variation for small genus hyperelliptic index calculus	475
F. Morain , Implementing the asymptotically fast version of the elliptic curve primality proving algorithm	493
Andrew D. Loveless , A compositeness test that never fails for Carmichael numbers	507

Vol. 76, No. 258

April 2007

Daniel Arroyo, Alexei Bespalov, and Norbert Heuer , On the finite element method for elliptic problems with degenerate and singular coefficients	509
Xiaobing Feng, Yinnian He, and Chun Liu , Analysis of finite element approximations of a phase field model for two-phase fluids	539
Susanne C. Brenner, Fengyan Li, and Li-yeng Sung , A locally divergence-free nonconforming finite element method for the time-harmonic Maxwell equations	573
James H. Bramble and Joseph E. Pasciak , Analysis of a finite PML approximation for the three dimensional time-harmonic Maxwell and acoustic scattering problems	597
Tsogtgerel Gantumur, Helmut Harbrecht, and Rob Stevenson , An optimal adaptive wavelet method without coarsening of the iterands ..	615
Natalia Kopteva , Maximum norm error analysis of a 2d singularly perturbed semilinear reaction-diffusion problem	631
Todd F. Dupont and Yingjie Liu , Back and forth error compensation and correction methods for semi-Lagrangian schemes with application to level set interface computations	647
N. V. Krylov , A priori estimates of smoothness of solutions to difference Bellman equations with linear and quasi-linear operators	669
H. Holden, K. H. Karlsen, and N. H. Risebro , Convergent difference schemes for the Hunter–Saxton equation	699
A. G. Werschulz and H. Woźniakowski , Tractability of quasilinear problems II: Second-order elliptic problems	745
T. Sengadir , Discretisation of an infinite delay equation	777
Sun-Mi Kim and Lothar Reichel , Anti-Szegő quadrature rules	795
Robert S. Maier , The 192 solutions of the Heun equation	811
Knut Mørken and Martin Reimers , An unconditionally convergent method for computing zeros of splines and polynomials	845
Michael S. Floater and Tom Lyche , Two chain rules for divided differences and Faà di Bruno’s formula	867
Alfredo Deaño and Javier Segura , Transitory minimal solutions of hypergeometric recursions and pseudoconvergence of associated continued fractions	879

Kai Bittner and Karsten Urban , On interpolatory divergence-free wavelets	903
Kirill A. Kopotun , Univariate splines: Equivalence of moduli of smoothness and applications	931
Felipe Cucker, Huaian Diao, and Yimin Wei , On mixed and componentwise condition numbers for Moore–Penrose inverse and linear least squares problems	947
G. W. Wasilkowski and H. Woźniakowski , The power of standard information for multivariate approximation in the randomized setting	965
Vasile Sinescu and Stephen Joe , Good lattice rules based on the general weighted star discrepancy	989
James S. Kraft and Lawrence C. Washington , Heuristics for class numbers and lambda invariants	1005
Georges Rhin and Qiang Wu , On the smallest value of the maximal modulus of an algebraic integer	1025
Lassina Dembélé , Quaternionic Manin symbols, Brandt matrices, and Hilbert modular forms	1039
Hiroki Sumida-Takahashi , Computation of the p-part of the ideal class group of certain real abelian fields	1059
Gabriela Olteanu , Computing the Wedderburn decomposition of group algebras by the Brauer–Witt theorem	1073
Reviews and Descriptions of Tables and Books	1089
Roman Wienands and Wolfgang Joppich 1	

Vol. 76, No. 259

July 2007

Xiaobing Feng and Ohannes A. Karakashian , Fully discrete dynamic mesh discontinuous Galerkin methods for the Cahn–Hilliard equation of phase transition	1093
Erik Burman and Alexandre Ern , Continuous interior penalty hp-finite element methods for advection and advection-diffusion equations	1119
Michael Griebel, Karl Scherer, and Marc Alexander Schweitzer , Robust norm equivalencies for diffusion problems	1141
Christophe Berthon and Frédéric Coquel , Nonlinear projection methods for multi-entropies Navier–Stokes systems	1163
M. Amara, D. Capatina-Papaghiuc, and D. Trujillo , Stabilized finite element method for Navier–Stokes equations with physical boundary conditions	1195
Adimurthi, Siddhartha Mishra, and G. D. Veerappa Gowda , Convergence of Godunov type methods for a conservation law with a spatially varying discontinuous flux function	1219
Wolfgang Dahmen, Helmut Harbrecht, and Reinhold Schneider , Adaptive methods for boundary integral equations: Complexity and convergence estimates	1243

M. S. Min, S. M. Kaber, and W. S. Don, Fourier–Padé approximations and filtering for spectral simulations of an incompressible Boussinesq convection problem	1275

Reviews and Descriptions of Tables and Books	2253
Z. Chen, G. Huan, and Y. Ma 6 , Per Christian Hansen, James G. Nagy, and Dianne P. O’Leary 7	

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/cgi-bin/peertrack/submission.pl, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The list of classifications is also available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from www.ams.org/publications/. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$. To this end, the Society has prepared $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of $\mathcal{T}\mathcal{E}\mathcal{X}$, using $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time. $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ is the highly preferred format of $\mathcal{T}\mathcal{E}\mathcal{X}$, but author packages are also available in $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$. Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ or plain $\mathcal{T}\mathcal{E}\mathcal{X}$ are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production

system. \LaTeX users will find that $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ is the same as $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ with additional commands to simplify the typesetting of mathematics, and users of plain $\mathcal{T}\mathcal{E}\mathcal{X}$ should have the foundation for learning $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$.

Authors may retrieve an author package from the AMS website starting from www.ams.org/tex/ or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as `anonymous`, enter username as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format following the author packages link from www.ams.org/tex/. The author package can also be obtained free of charge by sending email to tech-support@ams.org (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ or $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$ and the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or diskette, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/jourhtml/authors.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

AMS policy on making changes to articles after posting. Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata

article. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

T_EX files available upon request. T_EX files are available upon request for authors by sending email to file-request@ams.org or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The T_EX file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because T_EX production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, T_EX files cannot be guaranteed to run through the author's version of T_EX without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's T_EX environment.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.
