## Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

**Submission information.** See **Information for Authors** at the end of this issue.

**Publisher Item Identifier.** The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

**Postings to the AMS website.** Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

**Subscription information.** *Mathematics of Computation* (ISSN 0025-5718) is published quarterly. Beginning in January 1996 *Mathematics of Computation* is accessible from [www.ams.org/journals/](http://www.ams.org/journals/). Subscription prices for Volume 77 (2008) are as follows: for paper delivery, \$505 list, \$404 institutional member, \$455 corporate member, \$328 member of CBMS organizations; \$303 individual member; for electronic delivery, \$455 list, \$364 institutional member, \$410 corporate member, \$296 member of CBMS organizations, \$273 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add \$18 for surface delivery outside the United States and India; \$19 to India. Expedited delivery to destinations in North America is \$27; elsewhere \$56. For paper delivery a late charge of 10% of the subscription price will be imposed upon orders received from nonmembers after January 1 of the subscription year.

**Back number information.** For back issues see the [www.ams.org/bookstore](http://www.ams.org/bookstore).

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

**Copying and reprinting.** Material in this journal may be reproduced by any means for educational and scientific purposes without fee or permission with the exception of reproduction by services that collect fees for delivery of documents and provided that the customary acknowledgment of the source is given. This consent does not extend to other kinds of copying for general distribution, for advertising or promotional purposes, or for resale. Requests for permission for commercial use of material should be addressed to the Acquisitions Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. Requests can also be made by e-mail to [reprint-permission@ams.org](mailto:reprint-permission@ams.org).

Excluded from these provisions is material in articles for which the author holds copyright. In such cases, requests for permission to use or reprint should be addressed directly to the author(s). (Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.)

---

*Mathematics of Computation* is published quarterly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2294 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to *Mathematics of Computation*, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

© 2008 by the American Mathematical Society. All rights reserved.

This journal is indexed in *Mathematical Reviews*, *Zentralblatt MATH*, *Science Citation Index*<sup>®</sup>, *Science Citation Index*<sup>TM</sup>-*Expanded*, *ISI Alerting Services*<sup>SM</sup>, *CompuMath Citation Index*<sup>®</sup>, and *Current Contents*<sup>®</sup>/*Physical, Chemical & Earth Sciences*. This journal is archived in *Portico*.

⊗ The paper used in this book is acid-free and falls within the guidelines established to ensure permanence and durability.

# MATHEMATICS OF COMPUTATION

## CONTENTS

Vol. 77, No. 263

July 2008

Douglas N. Arnold, Gerard Awanou, and Ragnar Winther, <a href="#">Finite elements for symmetric tensors in three dimensions</a> .....	1229
Yunqing Huang and Jinchao Xu, <a href="#">Superconvergence of quadratic finite elements on mildly structured grids</a> .....	1253
Yanping Chen, <a href="#">Superconvergence of mixed finite element methods for optimal control problems</a> .....	1269
J. Guzmán, <a href="#">Local and pointwise error estimates of the local discontinuous Galerkin method applied to the Stokes problem</a> .....	1293
Jaemun Ku, <a href="#">Weak coupling of solutions of first-order least-squares method</a> ..	1323
Qiya Hu, Shi Shu, and Jun Zou, <a href="#">A mortar edge element method with nearly optimal convergence for three-dimensional Maxwell's equations</a> ..	1333
Ferenc Izsák, Davit Harutyunyan, and Jaap J.W. van der Vegt, <a href="#">Implicit a posteriori error estimates for the Maxwell equations</a> .....	1355
J. L. Guermond, Jie Shen, and Xiaofeng Yang, <a href="#">Error analysis of fully discrete velocity-correction methods for incompressible flows</a> .....	1387
Edward J. Fuselier, <a href="#">Sobolev-type approximation rates for divergence-free and curl-free RBF interpolants</a> .....	1407
Jan S. Hesthaven and Robert M. Kirby, <a href="#">Filtering in Legendre spectral methods</a> .....	1425
Zhen-Huan Teng, <a href="#">Modified equation for adaptive monotone difference schemes and its convergent analysis</a> .....	1453
Xiliang Lu, Ping Lin, and Jian-Guo Liu, <a href="#">Analysis of a sequential regularization method for the unsteady Navier-Stokes equations</a> .....	1467
Francisco Guillén-González and Juan Vicente Gutiérrez-Santacreu, <a href="#">Unconditional stability and convergence of fully discrete schemes for 2D viscous fluids models with mass diffusion</a> .....	1495
J. Fontbona and S. Méléard, <a href="#">A random space-time birth particle method for 2d vortex equations with external field</a> .....	1525
Peter Bürgisser, Felipe Cucker, and Martin Lotz, <a href="#">The probability that a slightly perturbed numerical analysis problem is difficult</a> .....	1559
C. Brezinski and M. Redivo-Zaglia, <a href="#">Rational extrapolation for the PageRank vector</a> .....	1585
J. S. Brauchart, <a href="#">Optimal logarithmic energy points on the unit sphere</a> ..	1599
B. C. Carlson, <a href="#">Power series for inverse Jacobian elliptic functions</a> .....	1615
Xuan-Yong Zhu and Wen-Feng Qi, <a href="#">On the distinctness of modular reductions of maximal length sequences modulo odd prime powers</a> ...	1623
J. E. Cremona, <a href="#">Unimodular integer circulants</a> .....	1639
Peter Huggins, Bernd Sturmfels, Josephine Yu, and Debbie S. Yuster, <a href="#">The hyperdeterminant and triangulations of the 4-cube</a> .....	1653
Peter Borwein, Ron Ferguson, and Michael J. Mossinghoff, <a href="#">Sign changes in sums of the Liouville function</a> .....	1681
Shahar Golan, <a href="#">Equal moments division of a set</a> .....	1695
Tadej Kotnik, <a href="#">Computational estimation of the constant <math>\beta(1)</math> characterizing the order of <math>\zeta(1 + it)</math></a> .....	1713

<b>Scott Ahlgren</b> , On the irreducibility of Hecke polynomials .....	1725
<b>H. Kadiri</b> , Short effective intervals containing primes in arithmetic progressions and the seven cubes problem .....	1733
<b>Patrick Costello and Michael Osborne</b> , Periodicity of the parity of a partition function related to making change .....	1749
<b>A. Bostan, F. Morain, B. Salvy, and É. Schost</b> , Fast algorithms for computing isogenies between elliptic curves .....	1755
<b>Helen Avelin</b> , Computations of Eisenstein series on Fuchsian groups .....	1779
<b>Harald Meyer</b> , Primitive central idempotents of finite group rings of symmetric groups .....	1801
<b>Akinari Hoshi and Yūichi Rikuna</b> , Rationality problem of three-dimensional purely monomial group actions: the last case .....	1823
<b>Maxime Augier and Shalom Eliahou</b> , Parity-regular Steinhaus graphs .....	1831
<b>Weiling Yang and Fuji Zhang</b> , Links and cubic 3-polytopes .....	1841
<b>Takeshi Goto and Yasuo Ohno</b> , Odd perfect numbers have a prime factor exceeding $10^8$ .....	1859
<b>K. G. Hare and C. J. Smyth</b> , Corrigendum to “The monic integer transfinite diameter” .....	1869

## Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish and Copyright Agreement is required before a paper will be published in this journal. After a paper is accepted for publication, the Providence office will send out a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

## Information for Authors

**Initial submission.** The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at [www.ams.org/cgi-bin/peertrack/submission.pl](http://www.ams.org/cgi-bin/peertrack/submission.pl), or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2000 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from [www.ams.org/msc/](http://www.ams.org/msc/). The list of classifications is also available in print starting with the 1999 annual index of *Mathematical Reviews*. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from [www.ams.org/publications/](http://www.ams.org/publications/). To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at [www.ams.org/mrlookup/](http://www.ams.org/mrlookup/).

**Electronically prepared manuscripts.** For the final submission of accepted papers, the AMS encourages use of electronically prepared manuscripts, with a strong preference for  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ . To this end, the Society has prepared  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web. Because linking must often be added manually to electronically prepared manuscripts in other forms of  $\mathcal{T}\mathcal{E}\mathcal{X}$ , using  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  also reduces the amount of technical intervention once the files are received by the AMS. This results in fewer errors in processing and saves the author proofreading time.  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  papers also move more efficiently through the production stream, helping to minimize publishing costs.

$\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  is the highly preferred format of  $\mathcal{T}\mathcal{E}\mathcal{X}$ , but author packages are also available in  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{T}\mathcal{E}\mathcal{X}$ . Those authors who make use of these style files from the beginning of the writing process will further reduce their own efforts. Manuscripts prepared electronically in  $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  or plain  $\mathcal{T}\mathcal{E}\mathcal{X}$  are normally not acceptable due to the high amount of technical time required to insure that the file will run properly through the AMS in-house production

system. L<sup>A</sup>T<sub>E</sub>X users will find that  $\mathcal{A}\mathcal{M}\mathcal{S}$ -L<sup>A</sup>T<sub>E</sub>X is the same as L<sup>A</sup>T<sub>E</sub>X with additional commands to simplify the typesetting of mathematics, and users of plain T<sub>E</sub>X should have the foundation for learning  $\mathcal{A}\mathcal{M}\mathcal{S}$ -L<sup>A</sup>T<sub>E</sub>X.

Authors may retrieve an author package from the AMS website starting from [www.ams.org/tex/](http://www.ams.org/tex/) or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as `anonymous`, enter username as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format following the author packages link from [www.ams.org/tex/](http://www.ams.org/tex/). The author package can also be obtained free of charge by sending email to [tech-support@ams.org](mailto:tech-support@ams.org) (Internet) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify  $\mathcal{A}\mathcal{M}\mathcal{S}$ -L<sup>A</sup>T<sub>E</sub>X or  $\mathcal{A}\mathcal{M}\mathcal{S}$ -T<sub>E</sub>X and the publication in which your paper will appear. Please be sure to include your complete email address.

**After acceptance.** The final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also send the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at [www.ams.org/submit-book-journal/](http://www.ams.org/submit-book-journal/), sent via email to [pub-submit@ams.org](mailto:pub-submit@ams.org) (Internet), or sent on diskette to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or diskette, please be sure to include a message indicating in which publication the paper has been accepted. No corrections will be accepted electronically. Authors must mark their changes on their proof copies and return them to the Providence office. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available starting from [www.ams.org/jourhtml/authors.html](http://www.ams.org/jourhtml/authors.html). A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator. No matter what method was used to produce the graphic, it is necessary to provide a paper copy to the AMS.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

**AMS policy on making changes to articles after posting.** Articles are posted to the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually posted to the AMS website but not yet in an issue, changes cannot be made in place in the paper. However, an “Added after posting” section may be added to the paper right before the References when there is a critical error in the content of the paper. The “Added after posting” section gives the author an opportunity to correct this type of critical error before the article is put into an issue for printing and before it is then reposted with the issue. The “Added after posting” section remains a permanent part of the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is initially posted.

Once the article is assigned to an issue, even if the issue has not yet been posted to the AMS website, corrections may be made to the paper by submitting a traditional errata

article. The errata article will appear in a future print issue and will link back and forth on the web to the original article online.

**Secure manuscript tracking on the Web.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from [www.ams.org/mstrack/](http://www.ams.org/mstrack/). An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to [mcom-query@ams.org](mailto:mcom-query@ams.org).

**T<sub>E</sub>X files available upon request.** T<sub>E</sub>X files are available upon request for authors by sending email to [file-request@ams.org](mailto:file-request@ams.org) or by contacting the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. The request should include the title of the paper, the name(s) of the author(s), the name of the publication in which the paper has or will appear, and the volume and issue numbers if known. The T<sub>E</sub>X file will be sent to the author making the request after the article goes to the printer. If the requestor can receive Internet email, please include the email address to which the file should be sent. Otherwise please indicate a diskette format and postal address to which a disk should be mailed. **Note:** Because T<sub>E</sub>X production at the AMS sometimes requires extra fonts and macros that are not yet publicly available, T<sub>E</sub>X files cannot be guaranteed to run through the author's version of T<sub>E</sub>X without errors. The AMS regrets that it cannot provide support to eliminate such errors in the author's T<sub>E</sub>X environment.

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to [mcom-query@ams.org](mailto:mcom-query@ams.org) or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

Vol. 77, No. 263

July 2008

<b>Douglas N. Arnold, Gerard Awanou, and Ragnar Winther</b> , Finite elements for symmetric tensors in three dimensions .....	1229
<b>Yunqing Huang and Jinchao Xu</b> , Superconvergence of quadratic finite elements on mildly structured grids .....	1253
<b>Yanping Chen</b> , Superconvergence of mixed finite element methods for optimal control problems .....	1269
<b>J. Guzmán</b> , Local and pointwise error estimates of the local discontinuous Galerkin method applied to the Stokes problem .....	1293
<b>Jaeun Ku</b> , Weak coupling of solutions of first-order least-squares method .	1323
<b>Qiya Hu, Shi Shu, and Jun Zou</b> , A mortar edge element method with nearly optimal convergence for three-dimensional Maxwell's equations	1333
<b>Ferenc Izsák, Davit Harutyunyan, and Jaap J.W. van der Vegt</b> , Implicit a posteriori error estimates for the Maxwell equations .....	1355
<b>J. L. Guermond, Jie Shen, and Xiaofeng Yang</b> , Error analysis of fully discrete velocity-correction methods for incompressible flows .....	1387
<b>Edward J. Fuselier</b> , Sobolev-type approximation rates for divergence-free and curl-free RBF interpolants .....	1407
<b>Jan S. Hesthaven and Robert M. Kirby</b> , Filtering in Legendre spectral methods .....	1425
<b>Zhen-Huan Teng</b> , Modified equation for adaptive monotone difference schemes and its convergent analysis .....	1453
<b>Xiliang Lu, Ping Lin, and Jian-Guo Liu</b> , Analysis of a sequential regularization method for the unsteady Navier-Stokes equations .....	1467
<b>Francisco Guillén-González and Juan Vicente Gutiérrez-Santacreu</b> , Unconditional stability and convergence of fully discrete schemes for $2D$ viscous fluids models with mass diffusion .....	1495
<b>J. Fontbona and S. Méléard</b> , A random space-time birth particle method for 2d vortex equations with external field .....	1525
<b>Peter Bürgisser, Felipe Cucker, and Martin Lotz</b> , The probability that a slightly perturbed numerical analysis problem is difficult .....	1559
<b>C. Brezinski and M. Redivo-Zaglia</b> , Rational extrapolation for the PageRank vector .....	1585
<b>J. S. Brauchart</b> , Optimal logarithmic energy points on the unit sphere ..	1599
<b>B. C. Carlson</b> , Power series for inverse Jacobian elliptic functions .....	1615
<b>Xuan-Yong Zhu and Wen-Feng Qi</b> , On the distinctness of modular reductions of maximal length sequences modulo odd prime powers ...	1623
<b>J. E. Cremona</b> , Unimodular integer circulants .....	1639
