## Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

**Submission information.** See **Information for Authors** at the end of this issue.

**Publisher Item Identifier.** The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

**Publication on the AMS website.** Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

**Subscription information.** *Mathematics of Computation* is published bimonthly and is also accessible electronically from [www.ams.org/journals/](http://www.ams.org/journals/). Subscription prices for Volume 84 (2015) are as follows: for paper delivery, US\$696.00 list, US\$556.80 institutional member, US\$626.40 corporate member; US\$417.60 individual member; for electronic delivery, US\$612.00 list, US\$489.60 institutional member, US\$550.80 corporate member, US\$367.20 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US\$5 for delivery within the United States; US\$35 for delivery outside the United States. Subscription renewals are subject to late fees. See [www.ams.org/help-faq](http://www.ams.org/help-faq) for more journal subscription information.

**Back number information.** For back issues see the [www.ams.org/bookstore](http://www.ams.org/bookstore).

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

**Copying and reprinting.** Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Permissions to reuse portions of AMS publication content are handled by Copyright Clearance Center's RightsLink® service. For more information, visit: [www.ams.org/rightslink](http://www.ams.org/rightslink).

Translation rights and licensed reprint requests should be sent to: [reprint-permission@ams.org](mailto:reprint-permission@ams.org).

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

## INDEX TO VOLUME 84 (2015)

- Adcock, Ben, and Anders C. Hansen. *Generalized sampling and the stable and accurate reconstruction of piecewise analytic functions from their Fourier coefficients*, 237
- Adler, James H., and Victor Nistor. *Graded mesh approximation in weighted Sobolev spaces and elliptic equations in 2D*, 2191
- de A. e Silva, A. See Jespers, E.
- Akbary, Amir, and Kyle Hambrook. *A variant of the Bombieri-Vinogradov theorem with explicit constants and applications*, 1901
- Akbary, Amir, and Keilan Scholten. *Artin prime producing polynomials*, 1861
- Antonopoulou, D. C., G. D. Karali, M. Plexousakis, and G. E. Zouraris. *Crank-Nicolson finite element discretizations for a two-dimensional linear Schrödinger-type equation posed in a noncylindrical domain*, 1571
- Apel, Thomas, Johannes Pfefferer, and Arnd Rösch. *Finite element error estimates on the boundary with application to optimal control*, 33
- Argyros, I. K., M. A. Hernández, S. Hilout, and N. Romero. *Directional Chebyshev-type methods for solving equations*, 815
- Bach, Eric, and Andrew Shallue. *Counting composites with two strong liars*, 3069
- Bai, Shi, Richard P. Brent, and Emmanuel Thomé. *Root optimization of polynomials in the number field sieve*, 2447
- Balakrishnan, Jennifer S., Mirela Çiperiani, and William Stein.  *$p$ -adic heights of Heegner points and  $\Lambda$ -adic regulators*, 923
- Barbulescu, Razvan. *Selecting polynomials for the Function Field Sieve*, 2987
- Barekat, Farzin, and Stanley Osher. *A time continuation based fast approximate algorithm for compressed sensing related optimization*, 2791
- Bartels, Sören. *Error control and adaptivity for a variational model problem defined on functions of bounded variation*, 1217
- Bartels, Sören, Ricardo H. Nochetto, and Abner J. Salgado. *A total variation diminishing interpolation operator and applications*, 2569
- Batenkov, Dmitry. *Complete algebraic reconstruction of piecewise-smooth functions from Fourier data*, 2329
- Becher, Verónica, Pablo Ariel Heiber, and Theodore A. Slaman. *A computable absolutely normal Liouville number*, 2939
- Belabas, Karim, and Eduardo Friedman. *Computing the residue of the Dedekind zeta function*, 357
- Berthelin, Florent, Thierry Goudon, and Sebastian Minjeaud. *Kinetic schemes on staggered grids for barotropic Euler models: entropy-stability analysis*, 2221
- Best, D. G., and T. S. Trudgian. *Linear relations of zeroes of the zeta-function*, 2047
- Bisson, Gaetan. *Computing endomorphism rings of abelian varieties of dimension two*, 1977
- Böhm, Janko, Wolfram Decker, Claus Fieker, and Gerhard Pfister. *The use of bad primes in rational reconstruction*, 3013
- Bonito, Andrea, and Denis Devaud. *Adaptive finite element methods for the Stokes problem with discontinuous viscosity*, 2137
- Bonito, Andrea, and Joseph E. Pasciak. *Numerical approximation of fractional powers of elliptic operators*, 2083
- Bonnaillie-Noël, Virginie, Marc Dambrine, Frédéric Héreau, and Grégory Vial. *Artificial conditions for the linear elasticity equations*, 1599
- Bourgain, Jean, Sergei V. Konyagin, and Igor E. Shparlinski. *Character sums and deterministic polynomial root finding in finite fields*, 2969
- Boutin, Benjamin, Frédéric Coquel, and Philippe G. LeFloch. *Coupling techniques for nonlinear hyperbolic equations. IV. Well-balanced schemes for scalar multi-dimensional and multi-component laws*, 1663
- Boyer, Franck, Stella Krell, and Flore Nabet. *Inf-Sup stability of the discrete duality finite volume method for the 2D Stokes problem*, 2705
- Braun, Oliver, and Renaud Coulangeon. *Perfect lattices over imaginary quadratic number fields*, 1451
- Brenner, Susanne C., and Li-Yeng Sung. *Piecewise  $\mathbf{H}^1$  functions and vector fields associated with meshes generated by independent refinements*, 1017
- Brent, Richard P. See Bai, Shi

- Brent, Richard P., and Fredrik Johansson. *A bound for the error term in the Brent-McMillan algorithm*, 2351
- Büthe, Jan. *A method for proving the completeness of a list of zeros of certain L-functions*, 2413
- Cação, I. *See* Morais, J.
- Calvetti, Daniela, Erkki Somersalo, and Ruben Spies. *Variable order smoothness priors for ill-posed inverse problems*, 1753
- Cao, Weiming. *Superconvergence analysis of the linear finite element method and a gradient recovery postprocessing on anisotropic meshes*, 89
- Carstensen, Carsten, and Georg Dolzmann. *Convergence of adaptive finite element methods for a nonconvex double-well minimization problem*, 2111
- Carstensen, Carsten, Dietmar Gallistl, and Mira Schedensack. *Adaptive nonconforming Crouzeix-Raviart FEM for eigenvalue problems*, 1061
- Chan, Wai Kiu, María Inés Icaza, and Emilio A. Lauret. *A generalized Hermite constant for imaginary quadratic fields*, 1883
- Chen, Yannan, and Wenyu Sun. *A dwindling filter line search method for unconstrained optimization*, 187
- Chen, Zhongying, Yueheng Xu, and Yuanyuan Zhang. *A construction of higher-order finite volume methods*, 599
- Cheng, Xiaoliang. *See* Hu, Xiaozhe
- Cheon, Jung Hee. *See* Kim, Minkyu
- Chouly, Franz, Patrick Hild, and Yves Renard. *Symmetric and non-symmetric variants of Nitsche's method for contact problems in elasticity: theory and numerical experiments*, 1089
- Chung, Y.-M., and M. S. Jolly. *A unified approach to compute foliations, inertial manifolds, and tracking solutions*, 1729
- Cinkir, Zubeyir. *Computation of polarized metrized graph invariants by using discrete Laplacian matrix*, 2953
- Çiperiani, Mirela. *See* Balakrishnan, Jennifer S.
- Cohen, Henri. *Exact counting of  $D_\ell$  number fields with given quadratic resolvent*, 1933
- Cohen, Stephen D., Tomás Oliveira e Silva, and Tim Trudgian. *A proof of the conjecture of Cohen and Mullen on sums of primitive roots*, 2979
- Coquel, Frédéric. *See* Boutin, Benjamin
- Cosset, Romain, and Damien Robert. *Computing  $(\ell, \ell)$ -isogenies in polynomial time on Jacobians of genus 2 curves*, 1953
- Costello, Fintan, and Paul Watts. *An upper bound on Jacobsthal's function*, 1389
- Coulangeon, Renaud. *See* Braun, Oliver
- Cremona, J. E., T. A. Fisher, C. O'Neil, D. Simon, and M. Stoll. *Explicit  $n$ -descent on elliptic curves III. Algorithms*, 895
- Cuntz, Michael, and Christian Stump. *On root posets for noncrystallographic root systems*, 485
- Dambrine, Marc. *See* Bonnaillie-Noël, Virginie
- Darmon, Henri, Michael Daub, Sam Lichtenstein, and Victor Rotger. *Algorithms for Chow-Heegner points via iterated integrals*, 2505
- Daub, Michael. *See* Darmon, Henri
- Deckelnick, Klaus, Jakob Katz, and Friedhelm Schieweck. *A  $C^1$ -finite element method for the Willmore flow of two-dimensional graphs*, 2617
- Decker, Wolfram. *See* Böhm, Janko
- Demaret, Laurent, and Armin Iske. *Optimal  $N$ -term approximation by linear splines over anisotropic Delaunay triangulations*, 1241
- Demichel, Patrick. *See* Saouter, Yannick
- Deng, Weihua. *See* Tian, Wen Yi
- Devaud, Denis. *See* Bonito, Andrea
- Di Pietro, Daniele A., and Simon Lemaire. *An extension of the Crouzeix-Raviart space to general meshes with application to quasi-incompressible linear elasticity and Stokes flow*, 1
- Di Pietro, Daniele A., Martin Vohralík, and Soleiman Yousef. *Adaptive regularization, linearization, and discretization and a posteriori error control for the two-phase Stefan problem*, 153
- Dieci, Luca, and Alessandro Pugliese. *Hermitian matrices of three parameters: Perturbing coalescing eigenvalues and a numerical method*, 2763
- Dolzmann, Georg. *See* Carstensen, Carsten

- Doornik, Jurgen A. *Numerical evaluation of the Gauss hypergeometric function by power summations*, 1813
- Doyle, John R., and David Krumm. *Computing algebraic numbers of bounded height*, 2867
- Faber, Laura, and Habiba Kadiri. *New bounds for  $\psi(x)$* , 1339
- Fieker, Claus. *See* Böhm, Janko
- Filho, A. C. Souza. *See* Jespers, E.
- Fisher, T. A. *See* Cremona, J. E.
- Flagg, Garret M. *See* Yarman, Can Evren
- Flammang, V., and G. Rhin. *On the absolute Mahler measure of polynomials having all zeros in a sector. III*, 2927
- Fort, Gersende, Benjamin Jourdain, Estelle Kuhn, Tony Lelièvre, and Gabriel Stoltz. *Convergence of the Wang-Landau algorithm*, 2297
- Franek, Peter, and Stefan Ratschan. *Effective topological degree computation based on interval arithmetic*, 1265
- Friedman, Eduardo. *See* Belabas, Karim
- Gallistl, Dietmar. *See* Carstensen, Carsten
- Geck, Meinolf, and Abbie Halls. *On the Kazhdan–Lusztig cells in type  $E_8$* , 3029
- Georgoulis, Emmanuil H., and Juha M. Virtanen. *Adaptive discontinuous Galerkin approximations to fourth order parabolic problems*, 2163
- Gonzalez, Oscar, and Jun Li. *A convergence theorem for a class of Nyström methods for weakly singular integral equations on surfaces in  $\mathbb{R}^3$* , 675
- Gopalakrishnan, J., F. Li, N.-C. Nguyen, and J. Peraire. *Spectral approximations by the HDG method*, 1037
- Gottlieb, Sigal, Zachary Grant, and Daniel Higgs. *Optimal explicit strong stability preserving Runge–Kutta methods with high linear order and optimal nonlinear order*, 2743
- Goudon, Thierry. *See* Berthelin, Florent
- Grant, Zachary. *See* Gottlieb, Sigal
- Grau, José María, Antonio M. Oller-Marcén, and Daniel Sadornil. *A primality test for  $Kp^n + 1$  numbers*, 505
- Greaves, Gary. *Small-span Hermitian matrices over quadratic integer rings*, 409
- Greither, Cornelius, Xavier-François Roblot, and Brett A. Tangedal. *Corrigendum to “The Brumer–Stark conjecture in some families of extensions of specified degree”*, 955
- Gu, Xianfeng. *See* Lui, Lok Ming
- Guitart, Xavier, and Marc Masdeu. *Elementary matrix decomposition and the computation of Darmon points with higher conductor*, 875
- Halls, Abbie. *See* Geck, Meinolf
- Hambrook, Kyle. *See* Akbary, Amir
- Han, Bin. *Algorithm for constructing symmetric dual framelet filter banks*, 767
- Hansen, Anders C. *See* Adcock, Ben
- He, Simai, Zhening Li, and Shuzhong Zhang. *Inhomogeneous polynomial optimization over a convex set: An approximation approach*, 715
- Heiber, Pablo Ariel. *See* Becher, Verónica
- Héreau, Frédéric. *See* Bonnaillie-Noël, Virginie
- Hernández, M. A. *See* Argyros, I. K.
- Heuer, Norbert, and Francisco-Javier Sayas. *Analysis of a non-symmetric coupling of Interior Penalty DG and BEM*, 581
- Higgs, Daniel. *See* Gottlieb, Sigal
- Hild, Patrick. *See* Chouly, Franz
- Hilout, S. *See* Argyros, I. K.
- Hiptmair, Ralf, Carlos Jerez-Hanckes, and Shipeng Mao. *Extension by zero in discrete trace spaces: Inverse estimates*, 2589
- Hu, Jingwei, and Lexing Ying. *A fast algorithm for the energy space boson Boltzmann collision operator*, 271
- Hu, Jun, and Shangyou Zhang. *The minimal conforming  $H^k$  finite element spaces on  $R^n$  rectangular grids*, 563
- Hu, Xiaozhe, and Xiaoliang Cheng. *Corrigendum to: “Acceleration of a two-grid method for eigenvalue problems”*, 2701
- Huang, Yunqing. *See* Li, Jichun

- Hutz, Benjamin. *Determination of all rational preperiodic points for morphisms of  $PN$* , 289
- Icaza, María Inés. *See* Chan, Wai Kiu
- Ignat, Liviu I., Alejandro Pozo, and Enrique Zuazua. *Large-time asymptotics, vanishing viscosity and numerics for 1-D scalar conservation laws*, 1633
- Iske, Armin. *See* Demaret, Laurent
- Jerez-Hanckes, Carlos. *See* Hiptmair, Ralf
- Jespers, E., S. O. Juriaans, A. Kiefer, A. de A. e Silva, and A. C. Souza Filho. *From the Poincaré Theorem to generators of the unit group of integral group rings of finite groups*, 1489
- Jin, Bangti, Raytcho Lazarov, Joseph Pasciak, and William Rundell. *Variational formulation of problems involving fractional order differential operators*, 2665
- Johansson, Fredrik. *A fast algorithm for reversion of power series*, 475
- . *See* Brent, Richard P.
- Jolly, M. S. *See* Chung, Y.-M.
- Jourdain, Benjamin. *See* Fort, Gersende
- Juriaans, S. O. *See* Jespers, E.
- Kadiri, Habiba. *See* Faber, Laura
- Karakashian, Ohannes, and Charalambos Makridakis. *A posteriori error estimates for discontinuous Galerkin methods for the generalized Korteweg-de Vries equation*, 1145
- Karali, G. D. *See* Antonopoulou, D. C.
- Kaski, Petteri, Patric R. J. Östergård, and Alexandru Popa. *Enumeration of Steiner triple systems with subsystems*, 3051
- Katz, Jakob. *See* Deckelnick, Klaus
- Kiefer, A. *See* Jespers, E.
- Kim, Minkyu, and Jung Hee Cheon. *Computing prime divisors in an interval*, 339
- Konyagin, Sergei V. *See* Bourgain, Jean
- Koornwinder, Tom H., and Stefan A. Sauter. *The intersection of bivariate orthogonal polynomials on triangle patches*, 1795
- Krell, Stella. *See* Boyer, Franck
- Krumm, David. *See* Doyle, John R.
- Kuhn, Estelle. *See* Fort, Gersende
- Kuznetsov, A. *Computing the truncated theta function via Mordell integral*, 2911
- La Scala, Roberto. *Gröbner bases and gradings for partial difference ideals*, 959
- Lai, Ming-Jun, and Yang Liu. *The probabilistic estimates on the largest and smallest  $q$ -singular values of random matrices*, 1775
- Lakkis, Omar, Charalambos Makridakis, and Tristan Pryer. *A comparison of duality and energy a posteriori estimates for  $L_\infty(0, T; L_2(\Omega))$  in parabolic problems*, 1537
- Lamzouri, Youness, Xiannan Li, and Kannan Soundararajan. *Conditional bounds for the least quadratic non-residue and related problems*, 2391

## Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology. Reviews of books in areas related to computational mathematics are also included.

**Submission information.** See **Information for Authors** at the end of this issue.

**Publisher Item Identifier.** The Publisher Item Identifier (PII) appears at the top of the first page of each article published in this journal. This alphanumeric string of characters uniquely identifies each article and can be used for future cataloging, searching, and electronic retrieval.

**Publication on the AMS website.** Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

**Subscription information.** *Mathematics of Computation* is published bimonthly and is also accessible electronically from [www.ams.org/journals/](http://www.ams.org/journals/). Subscription prices for Volume 84 (2015) are as follows: for paper delivery, US\$696.00 list, US\$556.80 institutional member, US\$626.40 corporate member; US\$417.60 individual member; for electronic delivery, US\$612.00 list, US\$489.60 institutional member, US\$550.80 corporate member, US\$367.20 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US\$5 for delivery within the United States; US\$35 for delivery outside the United States. Subscription renewals are subject to late fees. See [www.ams.org/help-faq](http://www.ams.org/help-faq) for more journal subscription information.

**Back number information.** For back issues see the [www.ams.org/bookstore](http://www.ams.org/bookstore).

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2294 USA.

**Copying and reprinting.** Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Permissions to reuse portions of AMS publication content are handled by Copyright Clearance Center's RightsLink® service. For more information, visit: [www.ams.org/rightslink](http://www.ams.org/rightslink).

Translation rights and licensed reprint requests should be sent to: [reprint-permission@ams.org](mailto:reprint-permission@ams.org).

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 84, No. 291

January 2015

<b>Daniele A. Di Pietro and Simon Lemaire</b> , <a href="#">An extension of the Crouzeix–Raviart space to general meshes with application to quasi-incompressible linear elasticity and Stokes flow</a> .....	1
<b>Thomas Apel, Johannes Pfefferer, and Arnd Rösch</b> , <a href="#">Finite element error estimates on the boundary with application to optimal control</a> ..	33
<b>Qun Lin and Hehu Xie</b> , <a href="#">A multi-level correction scheme for eigenvalue problems</a> .....	71
<b>Weiming Cao</b> , <a href="#">Superconvergence analysis of the linear finite element method and a gradient recovery postprocessing on anisotropic meshes</a> .....	89
<b>Vincent Lescarret and Enrique Zuazua</b> , <a href="#">Numerical approximation schemes for multi-dimensional wave equations in asymmetric spaces</a> ..	119
<b>Daniele A. Di Pietro, Martin Vohralík, and Soleiman Yousef</b> , <a href="#">Adaptive regularization, linearization, and discretization and a posteriori error control for the two-phase Stefan problem</a> .....	153
<b>Yannan Chen and Wenyu Sun</b> , <a href="#">A dwindling filter line search method for unconstrained optimization</a> .....	187
<b>Yi Zhang, Liwei Zhang, Jia Wu, and Jianzhong Zhang</b> , <a href="#">A perturbation approach for an inverse quadratic programming problem over second-order cones</a> .....	209
<b>Ben Adcock and Anders C. Hansen</b> , <a href="#">Generalized sampling and the stable and accurate reconstruction of piecewise analytic functions from their Fourier coefficients</a> .....	237
<b>Jingwei Hu and Lexing Ying</b> , <a href="#">A fast algorithm for the energy space boson Boltzmann collision operator</a> .....	271
<b>Benjamin Hutz</b> , <a href="#">Determination of all rational preperiodic points for morphisms of <math>\mathbb{P}^1</math></a> .....	289
<b>Zhenxiang Zhang</b> , <a href="#">Estimating the counts of Carmichael and Williams numbers with small multiple seeds</a> .....	309
<b>Minkyu Kim and Jung Hee Cheon</b> , <a href="#">Computing prime divisors in an interval</a> .....	339
<b>David Loeffler and Jared Weinstein</b> , <a href="#">Erratum: “On the computation of local components of a newform”</a> .....	355
<b>Karim Belabas and Eduardo Friedman</b> , <a href="#">Computing the residue of the Dedekind zeta function</a> .....	357
<b>Frédéric Pitoun and Firmin Varescon</b> , <a href="#">Computing the torsion of the <math>p</math>-ramified module of a number field</a> .....	371
<b>Francesco Pappalardi</b> , <a href="#">Divisibility of reduction in groups of rational numbers</a> .....	385
<b>Gary Greaves</b> , <a href="#">Small-span Hermitian matrices over quadratic integer rings</a>	409
<b>Michael O. Rubinstein and Shuntaro Yamagishi</b> , <a href="#">Computing the moment polynomials of the zeta function</a> .....	425
<b>Thorsten Theobald and Timo de Wolff</b> , <a href="#">Approximating amoebas and coamoebas by sums of squares</a> .....	455

Fredrik Johansson, A fast algorithm for reversion of power series .....	475
Michael Cuntz and Christian Stump, On root posets for noncrystallographic root systems .....	485
José María Grau, Antonio M. Oller-Marcén, and Daniel Sadornil, A primality test for $Kp^n + 1$ numbers .....	505

Vol. 84, No. 292

March 2015

Christian Lubich and Dhia Mansour, Variational discretization of wave equations on evolving surfaces .....	513
Jichun Li, Yunqing Huang, and Wei Yang, Well-posedness study and finite element simulation of time-domain cylindrical and elliptical cloaks .....	543
Jun Hu and Shangyou Zhang, The minimal conforming $H^k$ finite element spaces on $R^n$ rectangular grids .....	563
Norbert Heuer and Francisco-Javier Sayas, Analysis of a non-symmetric coupling of Interior Penalty DG and BEM .....	581
Zhongying Chen, Yuesheng Xu, and Yuanyuan Zhang, A construction of higher-order finite volume methods .....	599
Kohei Soga, Stochastic and variational approach to the Lax-Friedrichs scheme .....	629
Zhonghua Qiao, Zhi-zhong Sun, and Zhengru Zhang, Stability and convergence of second-order schemes for the nonlinear epitaxial growth model without slope selection .....	653
Oscar Gonzalez and Jun Li, A convergence theorem for a class of Nyström methods for weakly singular integral equations on surfaces in $\mathbb{R}^3$ .....	675
Simai He, Zhening Li, and Shuzhong Zhang, Inhomogeneous polynomial optimization over a convex set: An approximation approach .....	715
Martin Sauer and Wilhelm Stannat, Lattice approximation for stochastic reaction diffusion equations with one-sided Lipschitz condition .....	743
Bin Han, Algorithm for constructing symmetric dual framelet filter banks .....	767
Luis M. Navas, Francisco J. Ruiz, and Juan L. Varona, Some functional relations derived from the Lindelöf-Wirtinger expansion of the Lerch transcendent function .....	803
I. K. Argyros, M. A. Hernández, S. Hilout, and N. Romero, Directional Chebyshev-type methods for solving equations .....	815
Xavier-François Roblot, Computing $p$ -adic $L$ -functions of totally real number fields .....	831
Xavier Guitart and Marc Masdeu, Elementary matrix decomposition and the computation of Darmon points with higher conductor .....	875
J. E. Cremona, T. A. Fisher, C. O’Neil, D. Simon, and M. Stoll, Explicit $n$ -descent on elliptic curves III. Algorithms .....	895
Jennifer S. Balakrishnan, Mirela Çiperiani, and William Stein, $p$ -adic heights of Heegner points and $\Lambda$ -adic regulators .....	923
Cornelius Greither, Xavier-François Roblot, and Brett A. Tangedal, Corrigendum to “The Brumer-Stark conjecture in some families of extensions of specified degree” .....	955

Roberto La Scala, Gröbner bases and gradings for partial difference ideals	959
Alexei Myasnikov, Andrey Nikolaev, and Alexander Ushakov, Knapsack problems in groups	987

Vol. 84, No. 293

## Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

## Information for Authors

**Initial submission.** All articles submitted to this journal are peer-reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at [www.ams.org/submission/mcom](http://www.ams.org/submission/mcom), or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2294 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2010 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from [www.ams.org/msc/](http://www.ams.org/msc/). The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from [www.ams.org/msnhtml/serials.pdf](http://www.ams.org/msnhtml/serials.pdf). To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at [www.ams.org/mrlookup/](http://www.ams.org/mrlookup/).

**Electronically prepared manuscripts.** Manuscripts should be electronically prepared in  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ . To this end, the Society has prepared  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for *Mathematics of Computation* from [www.ams.org/mcom/mcomauthorpac.html](http://www.ams.org/mcom/mcomauthorpac.html) or via FTP to [ftp.ams.org](ftp://ftp.ams.org) (login as `anonymous`, enter your complete email address as password, and type `cd pub/author-info`). The *AMS Author Handbook* and the *Instruction Manual* are available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to [tech-support@ams.org](mailto:tech-support@ams.org) or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

**After acceptance.** The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at [www.ams.org/submit-book-journal/](http://www.ams.org/submit-book-journal/), sent via email to [pub-submit@ams.org](mailto:pub-submit@ams.org), or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

**Electronic graphics.** Comprehensive instructions on preparing graphics are available starting from [www.ams.org/authors/journals.html](http://www.ams.org/authors/journals.html). A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

**AMS policy on making changes to articles after publication.** Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

**Secure manuscript tracking on the Web.** Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from [www.ams.org/mstrack/](http://www.ams.org/mstrack/). An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to [mcom-query@ams.org](mailto:mcom-query@ams.org).

**Inquiries.** Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to [mcom-query@ams.org](mailto:mcom-query@ams.org) or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2294 USA.

## Editorial Committee

SUSANNE C. BRENNER, Chair, Center for Computation & Technology and Department of Mathematics, Louisiana State University, Baton Rouge, LA 70803 USA; *E-mail*: [mathcomp@math.lsu.edu](mailto:mathcomp@math.lsu.edu)

RONALD F. A. COOLS, Department of Computer Science, Katholieke Universiteit Leuven, Celestijnenlaan 200A, B-3001 Heverlee, Belgium; *E-mail*: [ronald.cools@cs.kuleuven.ac.be](mailto:ronald.cools@cs.kuleuven.ac.be)
