AMERICAN MATHEMATICAL SOCIETY

Providence, Rhode Island USA

Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology.

Submission information. See **Information for Authors** at the end of this issue.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published bimonthly and is also accessible electronically from `www.ams.org/journals/`. Subscription prices for Volume 89 (2020) are as follows: for paper delivery, US$846.00 list, US$676.80 institutional member, US$761.40 corporate member, US$507.60 individual member; for electronic delivery, US$744.00 list, US$595.20 institutional member, US$669.60 corporate member, US$446.40 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US$6 for delivery within the United States; US$33 for delivery outside the United States. Subscription renewals are subject to late fees. See `www.ams.org/help-faq` for more journal subscription information.

Back number information. For back issues see the `www.ams.org/backvols`.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2213 USA.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Requests for permission to reuse portions of AMS publication content are handled by the Copyright Clearance Center. For more information, please visit `www.ams.org/publications/pubpermissions`.

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

Mathematics of Computation (ISSN 0025-5718 (print); ISSN 1088-6842 (online)) is published bimonthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.

© 2020 by the American Mathematical Society. All rights reserved.

This journal is indexed in *Mathematical Reviews*, *Zentralblatt MATH*, *Science Citation Index®*, *Science Citation Index™–Expanded*, *ISI Alerting Services℠*, *CompuMath Citation Index®*, and *Current Contents®/Physical, Chemical & Earth Sciences*. This journal is archived in *Portico* and in *CLOCKSS*.

♾ The paper used in this book is acid-free and falls within the guidelines established to ensure permanence and durability.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 89, No. 321 **January 2020**

Matthieu Bonnivard, Elie Bretin, and Antoine Lemenant, Numerical approximation of the Steiner problem in dimension 2 and 3 1
J. M. Melenk and C. Rojik, On commuting p-version projection-based interpolation on tetrahedra 45
Carsten Carstensen, Collective marking for adaptive least-squares finite element methods with optimal rates 89
I. G. Graham and S. A. Sauter, Stability and finite element error analysis for the Helmholtz equation with variable coefficients 105
Laurent Gosse, Aliasing and two-dimensional well-balanced for drift-diffusion equations on square grids 139
Adrien Laurent and Gilles Vilmart, Exotic aromatic B-series for the study of long time integrators for a class of ergodic SDEs 169
Jay Gopalakrishnan, Luka Grubišić, and Jeffrey Ovall, Spectral discretization errors in filtered subspace iteration 203
Rong Huang, A qd-type method for computing generalized singular values of BF matrix pairs with sign regularity to high relative accuracy 229
E. G. Birgin, N. Krejić, and J. M. Martínez, Iteration and evaluation complexity for the minimization of functions whose computation is intrinsically inexact 253
Michael Griebel and Peter Oswald, Stochastic subspace correction methods and fault tolerance 279
Pekka H. J. Lampio, Patric R. J. Östergård, and Ferenc Szöllősi, Orderly generation of Butson Hadamard matrices 313
Harald Andrés Helfgott, An improved sieve of Eratosthenes 333
Asaki Saito, Jun-ichi Tamura, and Shin-ichi Yasutomi, Multidimensional p-adic continued fraction algorithms 351
Leann Kopp, Natalie Randall, J. Maurice Rojas, and Yuyu Zhu, Randomized polynomial-time root counting in prime power rings 373
Frank Calegari, Shiva Chidambaram, and Alexandru Ghitza, Some modular abelian surfaces 387
Raymond van Bommel, David Holmes, and J. Steffen Müller, Explicit arithmetic intersection theory and computation of Néron-Tate heights 395
Harris B. Daniels and Enrique González-Jiménez, On the torsion of rational elliptic curves over sextic fields 411
Thomas Kahle and Christian Stump, Counting inversions and descents of random elements in finite Coxeter groups 437
Corey Harris and Martin Helmer, Segre class computation and practical applications 465
Andrew Fiori and Andrew Shallue, Average liar count for degree-2 Frobenius pseudoprimes 493

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from `http://www.ams.org/mcom`.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer-reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at `www.ams.org/submission/mcom`, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2213 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2010 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from `www.ams.org/msc/`. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from `www.ams.org/msnhtml/serials.pdf`. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at `www.ams.org/mrlookup/`.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX. To this end, the Society has prepared $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{A}\mathcal{M}\mathcal{S}$-LaTeX style file and the \label and \ref commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for *Mathematics of Computation* from `www.ams.org/mcom/mcomauthorpac.html`. The *AMS Author Handbook* is available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to `tech-support@ams.org` or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at `www.ams.org/submit-book-journal/`, sent via email to `pub-submit@ams.org`, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from `www.ams.org/authors/journals.html`. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a "hairline" for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

AMS policy on making changes to articles after publication. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from `www.ams.org/mstrack/`. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to `mcom-query@ams.org`.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to `mcom-query@ams.org` or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.
