Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology.

Submission information. See **Information for Authors** at the end of this issue.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published bimonthly and is also accessible electronically from www.ams.org/journals/. Subscription prices for Volume 90 (2021) are as follows: for paper delivery, US\$846.00 list, US\$676.80 institutional member, US\$761.40 corporate member, US\$507.60 individual member; for electronic delivery, US\$744.00 list, US\$595.20 institutional member, US\$669.60 corporate member, US\$446.40 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US\$6 for delivery within the United States; US\$33 for delivery outside the United States. Subscription renewals are subject to late fees. See www.ams.org/help-faq for more journal subscription information.

Back number information. For back issues see the www.ams.org/backvols.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2213 USA.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Requests for permission to reuse portions of AMS publication content are handled by the Copyright Clearance Center. For more information, please visit www.ams.org/publications/pubpermissions.

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

Mathematics of Computation (ISSN 0025-5718 (print); ISSN 1088-6842 (online)) is published bimonthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 90, No. 332

November 2021

Yifan Chen, Houman Owhadi, and Andrew M. Stuart , Consistency of empirical Bayes and kernel flow for hierarchical parameter estimation	2527
Sören Bartels , Error estimates for a class of discontinuous Galerkin methods for nonsmooth problems via convex duality relations	2579
Marcus J. Grote, Simon Michel, and Stefan A. Sauter , Stabilized leapfrog based local time-stepping method for the wave equation	2603
Qiwei Sheng and Cory D. Hauck , Uniform convergence of an upwind discontinuous Galerkin method for solving scaled discrete-ordinate radiative transfer equations with isotropic scattering	2645
J. Frédéric Bonnans, Guillaume Bonnet, and Jean-Marie Mirebeau , Second order monotone finite differences discretization of linear anisotropic differential operators	2671
Guillaume Bertoli, Christophe Besse, and Gilles Vilmart , Superconvergence of the Strang splitting when using the Crank-Nicolson scheme for parabolic PDEs with Dirichlet and oblique boundary conditions	2705
Gang Pang, Yibo Yang, Xavier Antoine, and Shaoqiang Tang , Stability and convergence analysis of artificial boundary conditions for the Schrödinger equation on a rectangular domain	2731
Bernard Bialecki, Maksymilian Dryja, and Ryan I. Fernandes , Convergence analysis of the finite difference ADI scheme for the heat equation on a convex set	2757
Heping Dong, Jun Lai, and Peijun Li , A highly accurate boundary integral method for the elastic obstacle scattering problem	2785
Stefan Steinerberger , A weighted randomized Kaczmarz method for solving linear systems	2815
Xiaoyue Li, Xuerong Mao, and Hongfu Yang , Strong convergence and asymptotic stability of explicit numerical schemes for nonlinear stochastic differential equations	2827
Michael Gnewuch, Hendrik Pasing, and Christian Weiß , A generalized Faulhaber inequality, improved bracketing covers, and applications to discrepancy	2873
Alessandro Languasco and Luca Righi , A fast algorithm to compute the Ramanujan-Deninger gamma function and some number-theoretic applications	2899
Richard P. Brent, David J. Platt, and Timothy S. Trudgian , Accurate estimation of sums over zeros of the Riemann zeta-function	2923
David Harvey , An exponent one-fifth algorithm for deterministic integer factorisation	2937
Andrew Obus and Tanush Shaska , Superelliptic curves with many automorphisms and CM Jacobians	2951
Andrej Brodnik, Aleksander Malnič, and Rok Požar , The simultaneous conjugacy problem in the symmetric group	2977
Robert Granger, Thorsten Kleinjung, Arjen K. Lenstra, Benjamin Wesolowski, and Jens Zumbrägel , Computation of a 30750-bit binary field discrete logarithm	2997

INDEX TO VOLUME 90 (2021)

- Akinshin, Andrey, Gil Goldman, and Yosef Yomdin. *Geometry of error amplification in solving the Prony system with near-colliding nodes*, 267
- Akrivis, Georgios, Michael Feischl, Balázs Kovács, and Christian Lubich. *Higher-order linearly implicit full discretization of the Landau–Lifshitz–Gilbert equation*, 995
- Alfonsi, Aurélien, Rafaël Coyaud, Virginie Ehrlicher, and Damiano Lombardi. *Approximation of optimal transport problems with marginal moments constraints*, 689
- Altmann, R., R. Maier, and B. Unger. *Semi-explicit discretization schemes for weakly coupled elliptic-parabolic problems*, 1089
- Antoine, Xavier. *See* Pang, Gang
- Argáez, Carlos. *See* Giesl, Peter
- Atallah, Nabil M., Claudio Canuto, and Guglielmo Scovazzi. *Analysis of the shifted boundary method for the Poisson problem in domains with corners*, 2041
- Avdispahić, Muharem. *Effective bounds for Huber’s constant and Faltings’s delta function*, 2381
- Baccou, Jean. *See* Kui, Zhiqing
- Bachmayr, Markus, Henrik Eisenmann, Emil Kieri, and André Uschmajew. *Existence of dynamical low-rank approximations to parabolic problems*, 1799
- Baillie, Robert, Andrew Fiori, and Samuel S. Wagstaff, Jr. *Strengthening the Baillie-PSW primality test*, 1931
- Barbero, Stefano, Umberto Cerruti, and Nadir Murru. *Periodic representations for quadratic irrationals in the field of p -adic numbers*, 2267
- Bartels, Sören. *Error estimates for a class of discontinuous Galerkin methods for nonsmooth problems via convex duality relations*, 2579
- Bartels, Sören, and Philipp Reiter. *Stability of a simple scheme for the approximation of elastic knots and self-avoiding inextensible curves*, 1499
- Ben-Artzi, Matania, and Jiequan Li. *Consistency of finite volume approximations to nonlinear hyperbolic balance laws*, 141
- Bennett, Michael A., Greg Martin, Kevin O’Bryant, and Andrew Rechnitzer. *Counting zeros of Dirichlet L -functions*, 1455
- Berthé, Valérie, Wolfgang Steiner, and Jörg M. Thuswaldner. *On the second Lyapunov exponent of some multidimensional continued fraction algorithms*, 883
- Bertoli, Guillaume, Christophe Besse, and Gilles Vilmart. *Superconvergence of the Strang splitting when using the Crank–Nicolson scheme for parabolic PDEs with Dirichlet and oblique boundary conditions*, 2705
- Bespalov, Alex. *See* Khan, Arbaz
- Besse, Christophe. *See* Bertoli, Guillaume
- Bialecki, Bernard, Maksymilian Dryja, and Ryan I. Fernandes. *Convergence analysis of the finite difference ADI scheme for the heat equation on a convex set*, 2757
- Bonnans, J. Frédéric, Guillaume Bonnet, and Jean-Marie Mirebeau. *Second order monotone finite differences discretization of linear anisotropic differential operators*, 2671
- Bonnet, Guillaume. *See* Bonnans, J. Frédéric
- Bouchut, François, and Xavier Lhébrard. *Convergence of the kinetic hydrostatic reconstruction scheme for the Saint Venant system with topography*, 1119
- Box, Joshua. *Quadratic points on modular curves with infinite Mordell–Weil group*, 321
- Boyvalenkov, P. G., P. D. Dragnev, D. P. Hardin, E. B. Saff, and M. M. Stoyanova. *Bounds for spherical codes: The Levenshtein framework lifted*, 1323
- Brent, Richard P., David J. Platt, and Timothy S. Trudgian. *Accurate estimation of sums over zeros of the Riemann zeta-function*, 2923
- Broadbent, Samuel, Habiba Kadiri, Allysa Lumley, Nathan Ng, and Kirsten Wilk. *Sharper bounds for the Chebyshev function $\theta(x)$* , 2281
- Brodnik, Andrej, Aleksander Malnič, and Rok Požar. *The simultaneous conjugacy problem in the symmetric group*, 2977
- Brogan, Patrick. *See* Chen, Jingmin
- Buhler, Joe, Shahar Golan, Rob Pratt, and Stan Wagon. *Littlewood polynomials, spectral-null codes, and equipowerful partitions*, 1435
- Cai, Xingju. *See* Jiang, Fan
- del Campo, Abraham Martín. *See* Leykin, Anton
- Cancès, Clément, Flore Nabet, and Martin Vohralík. *Convergence and a posteriori error analysis for energy-stable finite element approximations of degenerate parabolic equations*, 517

- Canuto, Claudio. *See* Atallah, Nabil M.
- Carrillo, José A., Ulrik S. Fjordholm, and Susanne Solem. *A second-order numerical method for the aggregation equations*, 103
- Cerruti, Umberto. *See* Barbero, Stefano
- Chen, Chiyu. *See* Zhang, Liping
- Chen, Jingmin, Thomas Yu, Patrick Brogan, Robert Kusner, Yilin Yang, and Andrew Zigerelli. *Numerical methods for biomembranes: Conforming subdivision methods versus non-conforming PL methods*, 471
- Chen, Yifan, Houman Owhadi, and Andrew M. Stuart. *Consistency of empirical Bayes and kernel flow for hierarchical parameter estimation*, 2527
- Chirre, Andrés, Valdir José Pereira Júnior, and David de Laat. *Primes in arithmetic progressions and semidefinite programming*, 2235
- Cools, Ronald, Frances Y. Kuo, Dirk Nuyens, and Ian H. Sloan. *Fast component-by-component construction of lattice algorithms for multivariate approximation with POD and SPOD weights*, 787
- Coyaud, Rafaël. *See* Alfonsi, Aurélien
- Dong, Heping, Jun Lai, and Peijun Li. *A highly accurate boundary integral method for the elastic obstacle scattering problem*, 2785
- Dostert, Maria, and Alexander Kolpakov. *Kissing number in non-Euclidean spaces of constant sectional curvature*, 2507
- Dragnev, P. D. *See* Boyvalenkov, P. G.
- Dryja, Maksymilian. *See* Bialecki, Bernard
- Du, Shukai, and Francisco-Javier Sayas. *A note on devising HDG+ projections on polyhedral elements*, 65
- Duan, Lian. *Faltings-Serre method on three dimensional selfdual representations*, 931
- Ehrlacher, Virginie. *See* Alfonsi, Aurélien
- Eisenmann, Henrik. *See* Bachmayr, Markus
- Ergür, Alperen A., Grigoris Paouris, and J. Maurice Rojas. *Smoothed analysis for the condition number of structured real polynomial systems*, 2161
- Ettahri, S., O. Ramaré, and L. Surel. *Fast multi-precision computation of some Euler products*, 2247
- Faustmann, Markus, Jens Markus Melenk, and Dirk Praetorius. *Quasi-optimal convergence rate for an adaptive method for the integral fractional Laplacian*, 1557
- Feischl, Michael. *See* Akrivis, Georgios
- Fernandes, Ryan I. *See* Bialecki, Bernard
- Filaseta, Michael, and Jeremiah Southwick. *Primes that become composite after changing an arbitrary digit*, 979
- Fiori, Andrew. *See* Baillie, Robert
- Fjordholm, Ulrik S. *See* Carrillo, José A.
- Flammang, V. *Upper bounds for the usual measures of totally positive algebraic integers with house less than 5.8*, 379
- Friedman, Eduardo, Fredrik Johansson, and Gabriel Ramirez-Raposo. *The minimal Fried average entropy for higher-rank Cartan actions*, 973
- Frühbis-Krüger, Anne, Lukas Ristau, and Bernd Schober. *Embedded desingularization for arithmetic surfaces – toward a parallel implementation*, 1957
- Gantner, Gregor, Alexander Haberl, Dirk Praetorius, and Stefan Schimanko. *Rate optimality of adaptive finite element methods with respect to overall computational costs*, 2011
- Georgoulis, Emmanuil H. *See* Kreuzer, Christian
- Giesl, Peter, Carlos Argáez, Sigurdur Hafstein, and Holger Wendland. *Minimization with differential inequality constraints applied to complete Lyapunov functions*, 2137
- Girolami, Mark. *See* Karvonen, Toni
- Gkanis, Ioannis, and Charalambos G. Makridakis. *A new class of entropy stable schemes for hyperbolic systems: Finite element methods*, 1663
- Gnewuch, Michael, Hendrik Pasing, and Christian Weiß. *A generalized Faulhaber inequality, improved bracketing covers, and applications to discrepancy*, 2873
- Golan, Shahar. *See* Buhler, Joe
- Goldman, Gil. *See* Akinshin, Andrey

- Granger, Robert, Thorsten Kleinjung, Arjen K. Lenstra, Benjamin Wesolowski, and Jens Zumbrägel. *Computation of a 30750-bit binary field discrete logarithm*, 2997
- Grote, Marcus J., Simon Michel, and Stefan A. Sauter. *Stabilized leapfrog based local time-stepping method for the wave equation*, 2603
- Haberl, Alexander. *See* Gantner, Gregor
- Hafstein, Sigurdur. *See* Giesl, Peter
- Han, Deren. *See* Jiang, Fan
- Hanselman, Jeroen, Sam Schiavone, and Jeroen Sijsling. *Gluing curves of genus 1 and 2 along their 2-torsion*, 2333
- Hao, Zhaopeng, Huiyuan Li, Zhimin Zhang, and Zhongqiang Zhang. *Sharp error estimates of a spectral Galerkin method for a diffusion-reaction equation with integral fractional Laplacian on a disk*, 2107
- Hardin, D. P. *See* Boyvalenkov, P. G.
- Hare, Kevin G., and Jonas Jankauskas. *On Newman and Littlewood polynomials with a prescribed number of zeros inside the unit disk*, 831
- Harvey, David. *An exponent one-fifth algorithm for deterministic integer factorisation*, 2937
- Hauck, Cory D. *See* Sheng, Qiwei
- Hauenstein, Jonathan D., Anton Leykin, Jose Israel Rodriguez, and Frank Sottile. *A numerical toolkit for multiprojective varieties*, 413
- He, Zhijian, and Xiaoqun Wang. *Convergence analysis of quasi-Monte Carlo sampling for quantile and expected shortfall*, 303
- Herbin, R., J.-C. Latché, S. Minjeaud, and N. Therme. *Conservativity and weak consistency of a class of staggered finite volume methods for the Euler equations*, 1155
- Herbin, R., J.-C. Latché, and K. Saleh. *Low Mach number limit of some staggered schemes for compressible barotropic flows*, 1039
- Herrmann, Lukas, Magdalena Keller, and Christoph Schwab. *Quasi-Monte Carlo Bayesian estimation under Besov priors in elliptic inverse problems*, 1831
- Hesthaven, Jan S., and Cecilia Pagliantini. *Structure-preserving reduced basis methods for Poisson systems*, 1701
- Hittmeir, Markus. *A time-space tradeoff for Lehman's deterministic integer factorization method*, 1999
- Hough, Robert, and Hyojeong Son. *The spectrum of the abelian sandpile model*, 441
- Hu, Jingwei, and Ruiwen Shu. *On the uniform accuracy of implicit-explicit backward differentiation formulas (IMEX-BDF) for stiff hyperbolic relaxation systems and kinetic equations*, 641
- Hu, Jun, and Yizhou Liang. *Conforming discrete Gradgrad-complexes in three dimensions*, 1637
- Imperiale, Sébastien. *See* Martínez, Jorge Albella
- Jankauskas, Jonas. *See* Hare, Kevin G.
- Jiang, Fan, Xingju Cai, Zhongming Wu, and Deren Han. *Approximate first-order primal-dual algorithms for saddle point problems*, 1227
- Johansson, Fredrik. *See* Friedman, Eduardo
- John, Volker, Petr Knobloch, and Paul Korschmeier. *On the solvability of the nonlinear problems in an algebraically stabilized finite element method for evolutionary transport-dominated equations*, 595
- Joly, Patrick. *See* Martínez, Jorge Albella
- Júnior, Valdir José Pereira. *See* Chirre, Andrés
- Kadiri, Habiba. *See* Broadbent, Samuel
- Karvonen, Toni, Chris J. Oates, and Mark Girolami. *Integration in reproducing kernel Hilbert spaces of Gaussian kernels*, 2209
- Katthän, Lukas, Helen Naumann, and Thorsten Theobald. *A unified framework of SAGE and SONC polynomials and its duality theory*, 1297
- Keller, Magdalena. *See* Herrmann, Lukas
- Khan, Arbaz, Alex Bespalov, Catherine E. Powell, and David J. Silvester. *Robust a posteriori error estimation for parameter-dependent linear elasticity equations*, 613
- Kieri, Emil. *See* Bachmayr, Markus
- Kirches, Christian. *See* Manns, Paul
- Kleinjung, Thorsten. *See* Granger, Robert

- Klüners, Jürgen, and Toru Komatsu. *Imaginary multiquadratic number fields with class group of exponent 3 and 5*, 1483
- Knobloch, Petr. *See* John, Volker
- Kolpakov, Alexander. *See* Dostert, Maria
- Komatsu, Toru. *See* Klüners, Jürgen
- Kopteva, Natalia. *Error analysis of an L_2 -type method on graded meshes for a fractional-order parabolic problem*, 19
- Korsmeier, Paul. *See* John, Volker
- Kovács, Balázs. *See* Akrivis, Georgios
- Kreuzer, Christian, and Emmanuil H. Georgoulis. *Corrigendum to “Convergence of adaptive, discontinuous Galerkin methods”*, 637
- Kritzer, P., F. Pillichshammer, and G. W. Wasilkowski. *On quasi-Monte Carlo methods in weighted ANOVA spaces*, 1381
- Kui, Zhiqing, Jean Baccou, and Jacques Liandrat. *On the construction of multiresolution analyses associated to general subdivision schemes*, 2185
- Kuo, Frances Y. *See* Cools, Ronald

Mathematics of Computation

This journal is devoted to research articles of the highest quality in computational mathematics. Areas covered include numerical analysis, computational discrete mathematics, including number theory, algebra and combinatorics, and related fields such as stochastic numerical methods. Articles must be of significant computational interest and contain original and substantial mathematical analysis or development of computational methodology.

Submission information. See **Information for Authors** at the end of this issue.

Publication on the AMS website. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue.

Subscription information. *Mathematics of Computation* is published bimonthly and is also accessible electronically from www.ams.org/journals/. Subscription prices for Volume 90 (2021) are as follows: for paper delivery, US\$846.00 list, US\$676.80 institutional member, US\$761.40 corporate member, US\$507.60 individual member; for electronic delivery, US\$744.00 list, US\$595.20 institutional member, US\$669.60 corporate member, US\$446.40 individual member. Upon request, subscribers to paper delivery of this journal are also entitled to receive electronic delivery. If ordering the paper version, add US\$6 for delivery within the United States; US\$33 for delivery outside the United States. Subscription renewals are subject to late fees. See www.ams.org/help-faq for more journal subscription information.

Back number information. For back issues see the www.ams.org/backvols.

Subscriptions and orders should be addressed to the American Mathematical Society, P.O. Box 845904, Boston, MA 02284-5904 USA. *All orders must be accompanied by payment.* Other correspondence should be addressed to 201 Charles Street, Providence, RI 02904-2213 USA.

Copying and reprinting. Individual readers of this publication, and nonprofit libraries acting for them, are permitted to make fair use of the material, such as to copy an article for use in teaching or research. Permission is granted to quote brief passages from this publication in reviews, provided the customary acknowledgment of the source is given.

Republication, systematic copying, or multiple reproduction of any material in this publication is permitted only under license from the American Mathematical Society. Requests for permission to reuse portions of AMS publication content are handled by the Copyright Clearance Center. For more information, please visit www.ams.org/publications/pubpermissions.

Excluded from these provisions is material for which the author holds copyright. In such cases, requests for permission to reuse or reprint material should be addressed directly to the author(s). Copyright ownership is indicated in the notice in the lower right-hand corner of the first page of each article.

Mathematics of Computation (ISSN 0025-5718 (print); ISSN 1088-6842 (online)) is published bimonthly by the American Mathematical Society at 201 Charles Street, Providence, RI 02904-2213 USA. Periodicals postage is paid at Providence, Rhode Island. Postmaster: Send address changes to Mathematics of Computation, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.

MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 90, No. 327

January 2021

Dmitriy Leykekhman and Buyang Li , Weak discrete maximum principle of finite element methods in convex polyhedra	1
Natalia Kopteva , Error analysis of an L2-type method on graded meshes for a fractional-order parabolic problem	19
D. Leykekhman , Pointwise error estimates for C^0 interior penalty approximation of biharmonic problems	41
Shukai Du and Francisco-Javier Sayas , A note on devising HDG+ projections on polyhedral elements	65
Weiwei Sun and Chengda Wu , New analysis of Galerkin-mixed FEMs for incompressible miscible flow in porous media	81
José A. Carrillo, Ulrik S. Fjordholm, and Susanne Solem , A second-order numerical method for the aggregation equations	103
Matania Ben-Artzi and Jiequan Li , Consistency of finite volume approximations to nonlinear hyperbolic balance laws	141
Xiao Li, Zhonghua Qiao, and Cheng Wang , Convergence analysis for a stabilized linear semi-implicit numerical scheme for the nonlocal Cahn–Hilliard equation	171
Katharina Schratz, Yan Wang, and Xiaofei Zhao , Low-regularity integrators for nonlinear Dirac equations	189
Liping Zhang and Chiyu Chen , A Newton-type algorithm for the tensor eigenvalue complementarity problem and some applications	215
Theresa Lange and Wilhelm Stannat , On the continuous time limit of the ensemble Kalman filter	233
Andrey Akinshin, Gil Goldman, and Yosef Yomdin , Geometry of error amplification in solving the Prony system with near-colliding nodes ...	267
Zhijian He and Xiaoqun Wang , Convergence analysis of quasi-Monte Carlo sampling for quantile and expected shortfall	303
Joshua Box , Quadratic points on modular curves with infinite Mordell–Weil group	321
Michael Larsen, with an appendix by Anne Larsen , Multiplicative series, modular forms, and Mandelbrot polynomials	345
V. Flammang , Upper bounds for the usual measures of totally positive algebraic integers with house less than 5.8	379
Bartosz Makuracki and Andrzej Mróz , Quadratic algorithm to compute the Dynkin type of a positive definite quasi-Cartan matrix	389
Jonathan D. Hauenstein, Anton Leykin, Jose Israel Rodriguez, and Frank Sottile , A numerical toolkit for multiprojective varieties .	413
Robert Hough and Hyojeong Son , The spectrum of the abelian sandpile model	441

Jingmin Chen, Thomas Yu, Patrick Brogan, Robert Kusner, Yilin Yang, and Andrew Zigerelli , Numerical methods for biomembranes: Conforming subdivision methods versus non-conforming PL methods .	471
Clément Cancès, Flore Nabet, and Martin Vohralík , Convergence and a posteriori error analysis for energy-stable finite element approximations of degenerate parabolic equations	517
Yuwen Li , Quasi-optimal adaptive mixed finite element methods for controlling natural norm errors	565
Volker John, Petr Knobloch, and Paul Korschmeier , On the solvability of the nonlinear problems in an algebraically stabilized finite element method for evolutionary transport-dominated equations	595
Arbaz Khan, Alex Bespalov, Catherine E. Powell, and David J. Silvester , Robust a posteriori error estimation for parameter-dependent linear elasticity equations	613
Christian Kreuzer and Emmanuil H. Georgoulis , Corrigendum to “Convergence of adaptive, discontinuous Galerkin methods”	637
Jingwei Hu and Ruiwen Shu , On the uniform accuracy of implicit-explicit backward differentiation formulas (IMEX-BDF) for stiff hyperbolic relaxation systems and kinetic equations	641
Ralf Zimmermann , A geometric approach to subspace updates and orthogonal matrix decompositions under rank-one modifications	671
Aurélien Alfonsi, Rafaël Coyaud, Virginie Ehrlacher, and Damiano Lombardi , Approximation of optimal transport problems with marginal moments constraints	689
Hugo Lavenant , Unconditional convergence for discretizations of dynamical optimal transport	739
Ronald Cools, Frances Y. Kuo, Dirk Nuyens, and Ian H. Sloan , Fast component-by-component construction of lattice algorithms for multivariate approximation with POD and SPOD weights	787
Xingping Sun, Zongmin Wu, and Xuan Zhou , On probabilistic convergence rates of stochastic Bernstein polynomials	813
Kevin G. Hare and Jonas Jankauskas , On Newman and Littlewood polynomials with a prescribed number of zeros inside the unit disk ...	831
David J. Platt and Timothy S. Trudgian , The error term in the prime number theorem	871
Valérie Berthé, Wolfgang Steiner, and Jörg M. Thuswaldner , On the second Lyapunov exponent of some multidimensional continued fraction algorithms	883
Michael J. Mossinghoff, Tomás Oliveira e Silva, and Timothy S. Trudgian , The distribution of k -free numbers	907
Lian Duan , Faltings-Serre method on three dimensional selfdual representations	931
Stefano Marseglia , Computing square-free polarized abelian varieties over finite fields	953
Eduardo Friedman, Fredrik Johansson, and Gabriel Ramirez-Raposo , The minimal Fried average entropy for higher-rank Cartan actions	973

Michael Filaseta and Jeremiah Southwick, Primes that become composite after changing an arbitrary digit	979
---	-----

Vol. 90, No. 329

May 2021

Georgios Akrivis, Michael Feischl, Balázs Kovács, and Christian Lubich, Higher-order linearly implicit full discretization of the Landau–Lifshitz–Gilbert equation	995
R. Herbin, J.-C. Latché, and K. Saleh, Low Mach number limit of some staggered schemes for compressible barotropic flows	1039
R. Altmann, R. Maier, and B. Unger, Semi-explicit discretization schemes for weakly coupled elliptic-parabolic problems	1089
François Bouchut and Xavier Lhébrard, Convergence of the kinetic hydrostatic reconstruction scheme for the Saint Venant system with topography	1119
R. Herbin, J.-C. Latché, S. Minjeaud, and N. Therme, Conservativity and weak consistency of a class of staggered finite volume methods for the Euler equations	1155
Xiang Wang, Junliang Lv, and Yonghai Li, New superconvergent structures developed from the finite volume element method in 1D ...	1179
Hong-lin Liao and Zhimin Zhang, Analysis of adaptive BDF2 scheme for diffusion equations	1207
Fan Jiang, Xingju Cai, Zhongming Wu, and Deren Han, Approximate first-order primal-dual algorithms for saddle point problems	1227
Paul Manns, Christian Kirches, and Felix Lenders, Approximation properties of sum-up rounding in the presence of vanishing constraints	1263
Lukas Katthän, Helen Naumann, and Thorsten Theobald, A unified framework of SAGE and SONC polynomials and its duality theory ...	1297
P. G. Boyvalenkov, P. D. Dragnev, D. P. Hardin, E. B. Saff, and M. M. Stoyanova, Bounds for spherical codes: The Levenshtein framework lifted	1323
José L. López, Pablo Palacios, and Pedro J. Pagola, Uniform convergent expansions of integral transforms	1357
P. Kritzer, F. Pillichshammer, and G. W. Wasilkowski, On quasi-Monte Carlo methods in weighted ANOVA spaces	1381
Anton Leykin, Abraham Martín del Campo, Frank Sottile, Ravi Vakil, and Jan Verschelde, Numerical Schubert calculus via the Littlewood–Richardson homotopy algorithm	1407
Joe Buhler, Shahar Golan, Rob Pratt, and Stan Wagon, Littlewood polynomials, spectral-null codes, and equipowerful partitions	1435
Michael A. Bennett, Greg Martin, Kevin O’Bryant, and Andrew Rechnitzer, Counting zeros of Dirichlet L -functions	1455
Jürgen Klüners and Toru Komatsu, Imaginary multiquadratic number fields with class group of exponent 3 and 5	1483

Sören Bartels and Philipp Reiter , Stability of a simple scheme for the approximation of elastic knots and self-avoiding inextensible curves ...	1499
Maxim A. Olshanskii, Arnold Reusken, and Alexander Zhiliakov , Inf-sup stability of the trace P_2-P_1 Taylor–Hood elements for surface PDEs	1527
Markus Faustmann, Jens Markus Melenk, and Dirk Praetorius , Quasi-optimal convergence rate for an adaptive method for the integral fractional Laplacian	1557
Jorge Albella Martínez, Sébastien Imperiale, Patrick Joly, and Jerónimo Rodríguez , Numerical analysis of a method for solving 2D linear isotropic elastodynamics with traction free boundary condition using potentials and finite elements	1589
Jun Hu and Yizhou Liang , Conforming discrete Gradgrad-complexes in three dimensions	1637
Ioannis Gkanis and Charalambos G. Makridakis , A new class of entropy stable schemes for hyperbolic systems: Finite element methods	1663
Jan S. Hesthaven and Cecilia Pagliantini , Structure-preserving reduced basis methods for Poisson systems	1701
Zheng Sun and Yulong Xing , Optimal error estimates of discontinuous Galerkin methods with generalized fluxes for wave equations on unstructured meshes	1741
O. B. Widlund, S. Zampini, S. Scacchi, and L. F. Pavarino , Block FETI–DP/BDDC preconditioners for mixed isogeometric discretizations of three-dimensional almost incompressible elasticity	1773
Markus Bachmayr, Henrik Eisenmann, Emil Kieri, and André Uchsmajew , Existence of dynamical low-rank approximations to parabolic problems	1799
Lukas Herrmann, Magdalena Keller, and Christoph Schwab , Quasi-Monte Carlo Bayesian estimation under Besov priors in elliptic inverse problems	1831
Frances Y. Kuo, Giovanni Migliorati, Fabio Nobile, and Dirk Nuyens , Function integration, reconstruction and approximation using rank-1 lattices	1861
Wenchang Sun , Local and global phaseless sampling in real spline spaces	1899
Robert Baillie, Andrew Fiori, and Samuel S. Wagstaff, Jr. , Strengthening the Baillie-PSW primality test	1931
Anne Frühbis-Krüger, Lukas Ristau, and Bernd Schober , Embedded desingularization for arithmetic surfaces – toward a parallel implementation	1957
Markus Hittmeir , A time-space tradeoff for Lehman’s deterministic integer factorization method	1999

Gregor Gantner, Alexander Haberl, Dirk Praetorius, and Stefan Schimanko , Rate optimality of adaptive finite element methods with respect to overall computational costs	2011
Nabil M. Atallah, Claudio Canuto, and Guglielmo Scovazzi , Analysis of the shifted boundary method for the Poisson problem in domains with corners	2041
Chun Liu, Cheng Wang, Steven M. Wise, Xingye Yue, and Shenggao Zhou , A positivity-preserving, energy stable and convergent numerical scheme for the Poisson-Nernst-Planck system	2071
Zhaopeng Hao, Huiyuan Li, Zhimin Zhang, and Zhongqiang Zhang , Sharp error estimates of a spectral Galerkin method for a diffusion-reaction equation with integral fractional Laplacian on a disk	2107
Peter Giesl, Carlos Argáez, Sigurdur Hafstein, and Holger Wendland , Minimization with differential inequality constraints applied to complete Lyapunov functions	2137
Alperen A. Ergür, Grigoris Paouris, and J. Maurice Rojas , Smoothed analysis for the condition number of structured real polynomial systems	2161
Zhiqing Kui, Jean Baccou, and Jacques Liandrat , On the construction of multiresolution analyses associated to general subdivision schemes ..	2185
Toni Karvonen, Chris J. Oates, and Mark Girolami , Integration in reproducing kernel Hilbert spaces of Gaussian kernels	2209
Andrés Chirre, Valdir José Pereira Júnior, and David de Laat , Primes in arithmetic progressions and semidefinite programming	2235
S. Ettahri, O. Ramaré, and L. Surel , Fast multi-precision computation of some Euler products	2247
Stefano Barbero, Umberto Cerruti, and Nadir Murru , Periodic representations for quadratic irrationals in the field of p-adic numbers	2267
Samuel Broadbent, Habiba Kadiri, Allysa Lumley, Nathan Ng, and Kirsten Wilk , Sharper bounds for the Chebyshev function $\theta(x)$	2281
Cong Wang, Jie Wu, and Qiang Wu , Totally positive algebraic integers with small trace	2317
Jeroen Hanselman, Sam Schiavone, and Jeroen Sijtsling , Gluing curves of genus 1 and 2 along their 2-torsion	2333
Muharem Avdispahić , Effective bounds for Huber’s constant and Faltings’s delta function	2381
Chris Parker and Jason Semeraro , Algorithms for fusion systems with applications to p-groups of small order	2415
Jiming Ma and Fangting Zheng , Orientable hyperbolic 4-manifolds over the 120-cell	2463
P. G. Walsh , Corrigendum to “On two classes of simultaneous Pell equations with no solutions”	2503
Maria Dostert and Alexander Kolpakov , Kissing number in non-Euclidean spaces of constant sectional curvature	2507

Yifan Chen, Houman Owhadi, and Andrew M. Stuart , Consistency of empirical Bayes and kernel flow for hierarchical parameter estimation .	2527
Sören Bartels , Error estimates for a class of discontinuous Galerkin methods for nonsmooth problems via convex duality relations	2579
Marcus J. Grote, Simon Michel, and Stefan A. Sauter , Stabilized leapfrog based local time-stepping method for the wave equation	2603
Qiwei Sheng and Cory D. Hauck , Uniform convergence of an upwind discontinuous Galerkin method for solving scaled discrete-ordinate radiative transfer equations with isotropic scattering	2645
J. Frédéric Bonnans, Guillaume Bonnet, and Jean-Marie Mirebeau , Second order monotone finite differences discretization of linear anisotropic differential operators	2671
Guillaume Bertoli, Christophe Besse, and Gilles Vilmart , Superconvergence of the Strang splitting when using the Crank-Nicolson scheme for parabolic PDEs with Dirichlet and oblique boundary conditions ...	2705
Gang Pang, Yibo Yang, Xavier Antoine, and Shaoqiang Tang , Stability and convergence analysis of artificial boundary conditions for the Schrödinger equation on a rectangular domain	2731
Bernard Bialecki, Maksymilian Dryja, and Ryan I. Fernandes , Convergence analysis of the finite difference ADI scheme for the heat equation on a convex set	2757
Heping Dong, Jun Lai, and Peijun Li , A highly accurate boundary integral method for the elastic obstacle scattering problem	2785
Stefan Steinerberger , A weighted randomized Kaczmarz method for solving linear systems	2815
Xiaoyue Li, Xuerong Mao, and Hongfu Yang , Strong convergence and asymptotic stability of explicit numerical schemes for nonlinear stochastic differential equations	2827
Michael Gnewuch, Hendrik Pasing, and Christian Weiß , A generalized Faulhaber inequality, improved bracketing covers, and applications to discrepancy	2873
Alessandro Languasco and Luca Righi , A fast algorithm to compute the Ramanujan-Deninger gamma function and some number-theoretic applications	2899
Richard P. Brent, David J. Platt, and Timothy S. Trudgian , Accurate estimation of sums over zeros of the Riemann zeta-function	2923
David Harvey , An exponent one-fifth algorithm for deterministic integer factorisation	2937
Andrew Obus and Tanush Shaska , Superelliptic curves with many automorphisms and CM Jacobians	2951
Andrej Brodnik, Aleksander Malnič, and Rok Požar , The simultaneous conjugacy problem in the symmetric group	2977
Robert Granger, Thorsten Kleinjung, Arjen K. Lenstra, Benjamin Wesolowski, and Jens Zumbrägel , Computation of a 30750-bit binary field discrete logarithm	2997

Editorial Information

Information on the backlog for this journal can be found on the AMS website starting from <http://www.ams.org/mcom>.

In an effort to make articles available as quickly as possible, articles are electronically published on the AMS website individually after proof is returned from authors and before appearing in an issue.

A Consent to Publish is required before we can begin processing your paper. After a paper is accepted for publication, the Providence office will send a Consent to Publish and Copyright Agreement to all authors of the paper. By submitting a paper to this journal, authors certify that the results have not been submitted to nor are they under consideration for publication by another journal, conference proceedings, or similar publication.

Information for Authors

Initial submission. All articles submitted to this journal are peer-reviewed. The AMS has a single blind peer-review process in which the reviewers know who the authors of the manuscript are, but the authors do not have access to the information on who the peer reviewers are. The AMS uses Centralized Manuscript Processing for initial submission. Authors should submit a PDF file using the Initial Manuscript Submission form found at www.ams.org/submission/mcom, or send one copy of the manuscript to the following address: Centralized Manuscript Processing, MATHEMATICS OF COMPUTATION, 201 Charles Street, Providence, RI 02904-2213 USA. If a paper copy is being forwarded to the AMS, indicate that it is for *Mathematics of Computation* and include the name of the corresponding author and contact information, such as an email address or mailing address. The author may suggest an appropriate editor for his or her paper.

The first page must consist of a *descriptive title*, followed by an *abstract* that summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as “some remarks about” or “concerning” should be avoided. The *abstract* must be brief, reasonably self-contained, and not exceed 300 words. Included with the footnotes to the paper should be the 2010 *Mathematics Subject Classification* representing the primary and secondary subjects of the article. The classifications are accessible from www.ams.org/msc/. The Mathematics Subject Classification footnote may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. Journal abbreviations used in bibliographies are listed in the latest *Mathematical Reviews* annual index. The series abbreviations are also accessible from www.ams.org/mshtml/serials.pdf. To help in preparing and verifying references, the AMS offers MR Lookup, a Reference Tool for Linking, at www.ams.org/mrlookup/.

Electronically prepared manuscripts. Manuscripts should be electronically prepared in $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$. To this end, the Society has prepared $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ author packages for each AMS publication. Author packages include instructions for preparing electronic manuscripts, samples, and a style file that generates the particular design specifications of that publication series. Articles properly prepared using the $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ style file and the `\label` and `\ref` commands automatically enable extensive intra-document linking to the bibliography and other elements of the article for searching electronically on the Web.

Authors may retrieve an author package for *Mathematics of Computation* from www.ams.org/mcom/mcomauthorpac.html. The *AMS Author Handbook* is available in PDF format from the author package link. The author package can also be obtained free of charge by sending email to tech-support@ams.org or from the Publication Division, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When requesting an author package, please specify the publication in which your paper will appear. Please be sure to include your complete email address.

After acceptance. The source files for the final version of the electronic manuscript should be sent to the Providence office immediately after the paper has been accepted for publication. The author should also submit a PDF of the final version of the paper to the Managing Editor, who will forward a copy to the Providence office. Accepted electronically prepared manuscripts can be submitted via the web at www.ams.org/submit-book-journal/, sent via email to pub-submit@ams.org, or sent on CD to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA. When sending a manuscript electronically via email or CD, please be sure to include a message indicating in which publication the paper has been accepted. Complete instructions on how to send files are included in the author package.

Electronic graphics. Comprehensive instructions on preparing graphics are available starting from www.ams.org/authors/journals.html. A few of the major requirements are given here.

Submit files for graphics as EPS (Encapsulated PostScript) files. This includes graphics originated via a graphics application as well as scanned photographs or other computer-generated images. If this is not possible, TIFF files are acceptable as long as they can be opened in Adobe Photoshop or Illustrator.

Authors using graphics packages for the creation of electronic art should also avoid the use of any lines thinner than 0.5 points in width. Many graphics packages allow the user to specify a “hairline” for a very thin line. Hairlines often look acceptable when proofed on a typical laser printer. However, when produced on a high-resolution laser imagesetter, hairlines become nearly invisible and will be lost entirely in the final printing process.

Screens should be set to values between 15% and 85%. Screens which fall outside of this range are too light or too dark to print correctly. Variations of screens within a graphic should be no less than 10%.

Any graphics created in color will be rendered in grayscale for the printed version unless color printing is authorized by the Managing Editor and the Publisher. In general, color graphics will appear in color in the online version.

AMS policy on making changes to articles after publication. Articles are published on the AMS website individually after proof is returned from authors and before appearing in an issue. To preserve the integrity of electronically published articles, once an article is individually published to the AMS website, changes cannot be made in place in the paper. The AMS does not keep author-related information, such as affiliation, current address, and email address, up to date after a paper is electronically published.

Corrections of critical errors may be made to the paper by submitting an errata article to the Editor. The errata article will be published electronically, will appear in a future print issue, and will link back and forth on the Web with the original article.

Secure manuscript tracking on the Web. Authors can track their manuscripts through the AMS journal production process using the personal AMS ID and Article ID printed in the upper right-hand corner of the Consent to Publish form sent to each author who publishes in AMS journals. Access to the tracking system is available from www.ams.org/mstrack/. An explanation of each production step is provided on the web through links from the manuscript tracking screen. Questions can be sent to mcom-query@ams.org.

Inquiries. Any inquiries concerning a paper that has been accepted for publication that cannot be answered via the manuscript tracking system mentioned above should be sent to mcom-query@ams.org or directly to the Electronic Prepress Department, American Mathematical Society, 201 Charles Street, Providence, RI 02904-2213 USA.
