Seville, Spain

June 18–21, 2003

Meeting #988
First Joint International Meeting between the AMS and the Real Sociedad Matematica Española (RSME).
Associate secretary: Susan J. Friedlander
Announcement issue of Notices: February 2003
Program first available on AMS website: To be announced
Program issue of electronic Notices: To be announced
Issue of Abstracts: To be announced

Deadlines
For organizers: Expired
For consideration of contributed papers in Special Sessions: Expired
For abstracts: Expired

Invited Addresses
Xavier Cabre, Universitat Politècnica de Cataluña, Barcelona, Phase transition layers, minimal surfaces, and ground states.
Charles Fefferman, Princeton University, Beyond the Whitney extension theorem.
Michael Hopkins, Massachusetts Institute of Technology, Title to be announced.
Ignacio Sols, Universidad Complutense, Madrid, Stability of principal bundles.

Luis Vega, Universidad del Pais Vasco, Bilbao, Integrating factors and generalized Schrödinger flows.
Efim Zelmanov, Yale University, Infinite dimensional algebras and superalgebras.

Special Sessions
Affine Algebraic Geometry, Jaime Gutierrez, University of Cantabria, Vladimir Shpilrain, City College of New York, and Jie-Tai Yu, University of Hong Kong.
Algebraic Geometry, Felix Delgado, Universidad de Valladolid, and Andrey N. Todorov, University of California Santa Cruz.
Algebraic Topology, Alejandro Adem, University of Wisconsin, J. Aguade, Universitat Autònoma de Barcelona, and Eric M. Friedlander, Northwestern University.
Banach Spaces of Analytic Functions, Daniel Girela, University of Malaga, and Michael Stessin, SUNY at Albany.
Biomolecular Mathematics, Thomas J. Head and Fernando Guzman, SUNY at Binghamton, Mario Perez, Universidad de Sevilla, and Carlos Martin-Vide, Rovira i Virgili University.
Classical and Harmonic Analysis, Nets Katz, University of Wisconsin, Carlos Perez, Universidad de Sevilla, and Ana Vargas, Universidad Autónoma de Madrid.
Combinatorics, Joseph E. Bonin, George Washington University, and Marc Noy, Universitat Politècnica de Cataluña.
Commutative Algebra: Geometric, Homological, Combinatorial and Computational Aspects, Alberto Corso, University
of Kentucky, Philippe GImenez, Universidad de Valladolid, and Santiago Zarzuela, Universitat de Barcelona.

Computational Methods in Algebra and Analysis, Eduardo Cattani, University of Massachusetts, Amherst, and Francisco Jesus Castro-Jimenez, Universidad de Sevilla.

Constructive Approximation Theory, Antonio Duran, Universidad de Sevilla, and Edward B. Saff, Vanderbilt University.

Control and Geometric Mechanics, Manuel de Leon, Instituto de Matematicas y Fisica Fundamental, Alberto Ibort, Universidad Carlos III, and Francesco Bullo, University of Illinois, Urbana-Champaign.

Differential Galois Theory, Teresa Crespo and Zbigniew Hajto, Universitat de Barcelona, and Andy R. Magid, University of Oklahoma.

Differential Structures and Homological Methods in Commutative Algebra and Algebraic Geometry, Gennady Lyubeznik, University of Minnesota, and Luis Narvaez-Macarro, Universidad de Sevilla.

Discrete and Computational Geometry, Ferran Hertado, Universitat Politècnica de Cataluña, and William Steiger, Rutgers University.

Dynamical Systems, George Haller, Massachusetts Institute of Technology, Zbigniew H. Nitecki, Tufts University, Enrique Ponce, Universidad de Sevilla, Tere M. Seara, Universitat Politècnica de Cataluña, and Xavier Jarque, Universitat Autònoma de Barcelona.

Effective Analytic Geometry over Complete Fields, Luis-Miguel Pardos, Universidad de Cantabria, and J. Maurice Rojas, Texas A&M University.

Geometric Methods in Group Theory, Jose Burillo, Universitat Politècnica de Cataluña, Jennifer Tayback, University of Albany, and Enric Ventura, Universitat Politècnica de Cataluña.

History of Modern Mathematics—Gauss to Wiles, Jose Ferreiros, Universidad de Sevilla, and David Rowe, Universitat Mainz.

Homological Methods in Banach Space Theory, Jesus M. F. Castillo, Universidad de Extremadura, and N. J. Kalton, University of Missouri.

Homotopy Algebras, Pedro Real, Universidad de Sevilla, Thomas J. Lada, North Carolina State University, and James Stasheff, University of North Carolina.

Interpolation Theory, Function Spaces and Applications, Fernando Cobos, Universidad Complutense de Madrid, and Pencho Petrushev, University of South Carolina.

Lorentzian Geometry and Mathematical Relativity, Luis J. Alias, Universidad de Murcia, and Gregory James Galloway, University of Miami.

Mathematical Aspects of Semiconductor Modeling and Nano-technology, Irene Martinez Gamba, University of Texas at Austin, and Jose Antonio Carrillo, Universidad de Granada.

Mathematical Fluid Dynamics, Diego Cordoba, CSIC, Madrid, and Princeton University, Susan Friedlander, University of Illinois, Chicago, and Marcos Antonio Fontelos, Universidad Rey Juan Carlos.

Mathematical Methods in Finance and Risk Management, Santiago Carrillo Menendez, Universidad Autonoma de Madrid, Antonio Falcó Montesinos, Universidad Cardenal Herrera CEU, Antonio Sanchez-Calle, Universidad Autonoma de Madrid, and Luis A. Seco, University of Toronto at Mississauga.

Mathematics of Electronmicroscopic Imaging, Jose-Maria Carazo, Centro Nacional de Biotecnologia-CSIC, and Gabor T. Herman, City University of New York.

Moduli Spaces in Geometry and Physics, Steven B. Bradlow, University of Illinois, Urbana-Champaign, and Oscar Garcia-Prada, Universidad Autonoma de Madrid.

Nonassociative Algebras and Their Applications, Efim I. Zelmanov, Yale University, Santos Gonzalez, Universidad de Oviedo, and Alberto Elduque, Universidad de Zaragoza.

Nonlinear Dispersive Equations, Gustavo Ponce, University of California Santa Barbara, and Luis Vega, Universidad del Pais Vasco.

Numerical Linear Algebra, Lothar Reichel, Kent State University, and Francisco Marcellan, University Carlos III de Madrid.

PDE Methods in Continuum Mechanics, Juan L. Vazquez, Universidad Autonoma de Madrid, and J. W. Neuberger, University of North Texas.

Polynomials and Multilinear Analysis in Infinite Dimensions, Richard M. Aron, Kent State University, J. A. Jaramillo and Jose G. Llavona, Universidad Complutense de Madrid, and Andrew M. Tonge, Kent State University.

Quantitative Results in Real Algebra and Geometry, Carlos Andradas and Antonio Diaz-Cano, Universidad Complutense, Victoria Powers, Emory University, and Frank Sottile, University of Massachusetts, Amherst.

Recent Developments in the Mathematical Theory of Inverse Problems, Russell Brown, University of Kentucky, Alberto Ruiz, Universidad Autonoma de Madrid, and Gunther Uhlmann, University of Washington.

Riemannian Foliations, Jesus Antonio Alvarez Lopez, Universidad de Santiago de Compostela, and Efton L. Park, Texas Christian University.

Ring Theory and Related Topics, Jose Gomez-Torrecillas, University of Granada, Pedro Antonio Guil Asensio, University of Murcia, Sergio R. Lopez-Permouth, Ohio University, and Blas Torrecillas, University of Almeria.

Variational Problems for Submanifolds, Frank Morgan, Williams College, and Antonio Ros, Universidad de Granada.
Boulder, Colorado

University of Colorado

October 2–4, 2003

Meeting #989
Joint Central/Western Section
Associate secretaries: Susan J. Friedlander and Michel L. Lapidus
Announcement issue of Notices: August 2003
Program issue of electronic Notices: October 2003
Issue of Abstracts: Volume 24, Issue 4

Deadlines
For organizers: Expired
For consideration of contributed papers in Special Sessions: Expired
For abstracts: August 12, 2003

Invited Addresses
Giovanni Forni, Northwestern University, Title to be announced.
Juha M. Heinonen, University of Michigan, Title to be announced.
Joseph D. Lakey, New Mexico State University, Recent progress in time-frequency analysis.
Albert Schwarz, University of California Davis, Maximally supersymmetric gauge theories.
Brooke E. Shipley, Purdue University, Title to be announced.
Avi Wigderson, Institute for Advanced Study, Title to be announced (Erdős Memorial Lecture).

Special Sessions
Algebraic Geometry (Code: AMS SS M1), Holger Kley, Rick Miranda, and Chris Peterson, Colorado State University.
Algebras, Lattices and Varieties (Code: AMS SS A1), Keith A. Kearnes, University of Colorado, Boulder, Agnes Szendrei, Bolyai Institute, and Walter Taylor, University of Colorado, Boulder.
Analysis on Singular Spaces (Code: AMS SS L1), Mario Bonk, University of Michigan, and Juha Heinonen, Mathematical Sciences Research Institute.
Applications of Number Theory and Algebraic Geometry to Coding (Code: AMS SS B1), David R. Grant, University of Colorado, Boulder, Jose Felipe Voloch, University of Texas at Austin, and Judy Leavitt Walker, University of Nebraska, Lincoln.
Associative Rings and Their Modules (Code: AMS SS J1), Gene Abrams, University of Colorado at Colorado Springs, and Kent Fuller, University of Iowa.

Computational and Mathematical Biology (Code: AMS SS S1), Harvey J. Greenberg, University of Colorado at Denver.
Computational Number Theory (Code: AMS SS R1), Brian Conrey and Michael Rubinstein, American Institute of Mathematics.
Dynamics of Rational Polygonal Billiards and Related Systems (Code: AMS SS K1), Giovanni Forni, Northwestern University.
Finite Geometries (Code: AMS SS N1), Stanley E. Payne, University of Colorado, Denver, and Robert Allen Liebler, Colorado State University.
Graphs and Diagraphs (Code: AMS SS H1), Michael Jacobson, University of Colorado, Denver, and Richard J. Lundgren, University of Colorado, Denver.
Groupoids in Analysis and Geometry (Code: AMS SS D1), Lawrence Baggett, University of Colorado, Boulder, Jerry Kaminker, Indiana University-Purdue University Indianapolis, and Judith Packer, University of Colorado, Boulder.
Homotopy Theory (Code: AMS SS F1), Daniel Dugger, University of Oregon, and Brooke E. Shipley, Purdue University.
Noncommutative Geometry and Geometric Analysis (Code: AMS SS E1), Carla Farsi, Alexander Gorokhovsky, and Siye Wu, University of Colorado.
Nonlinear Waves (Code: AMS SS P1), Bernard Deconinck, Colorado State University, and Harvey Segur, University of Colorado, Boulder.
Ubiquitous Heat Kernal (Code: AMS SS Q1), Jay Jorgenson, City College of New York, and Lynne Walling, University of Colorado, Boulder.

Binghamton, New York

Binghamton University

October 11–12, 2003

Meeting #990
Eastern Section
Associate secretary: Lesley M. Sibner
Announcement issue of Notices: August 2003
Program issue of electronic Notices: August 28, 2003
Program issue of electronic Notices: October 2003
Issue of Abstracts: Volume 24, Issue 4
Meetings & Conferences

Deadlines
For organizers: Expired
For consideration of contributed papers in Special Sessions:
June 24, 2003
For abstracts: August 19, 2003

Invited Addresses
Peter Kuchment, Texas A&M University, Title to be announced.
Zil Sela, Einstein Institute of Mathematics, Title to be announced.
Zoltan Szabo, Princeton University, Title to be announced.
Jeb F. Willenbring, Yale University, Title to be announced.

Special Sessions
Biomolecular Mathematics (Code: AMS SS A1), Thomas J. Head and Dennis G. Pixton, Binghamton University, Mitsunori Ogihara, University of Rochester, and Carlos Martin-Vide, Universitat Rovira i Virgili.

Boundary Value Problems on Singular Domains (Code: AMS SS C1), Juan B. Gil, Temple University, and Paul A. Loya, Binghamton University.

Character Theory of Finite Groups and Algebraic Combinatorics (Code: AMS SS P1), Kenneth W. Johnson, Pennsylvania State University, and Eirini Poimenidou, New College of Florida.

Dowling Lattices: The 30th Anniversary (Code: AMS SS N1), Thomas Zaslavsky, Binghamton University.

Finite Solvable Groups and Their Representations (Code: AMS SS K1), Ben Brewster, Binghamton University, and Arnold Feldman, Franklin & Marshall College.

Homotopy Theory: Honoring Peter Hilton on His Eightieth Birthday (Code: AMS SS J1), Martin Bendersky and Joseph Roitberg, Hunter College (CUNY).

Infinite Groups and Group Rings (Code: AMS SS D1), Luise-Charlotte Kappe, Binghamton University, and Derek J. S. Robinson, University of Illinois, Urbana-Champaign.

Inverse Problems and Tomography (Code: AMS SS H1), Peter Kuchment, Texas A&M University, Leonid A. Kunyaevsky, University of Arizona, and Eric Todd Quinto, Tufts University.

Lie Algebras, Conformal Field Theory, and Related Topics (Code: AMS SS E1), Chongyang Dong, University of California Santa Cruz, and Alex J. Feingold and Gaywalee Yamskulna, Binghamton University.

Manifold Theory (Code: AMS SS L1), Erik K. Pedersen, Binghamton University, and Ian Hambleton, McMaster University.

Noncommutative Ring Theory (Code: AMS SS M1), Howard E. Bell and Yuanlin Li, Brock University.

Probability Theory (Code: AMS SS F1), Miguel A. Arcones, Binghamton University, and Evarist Gine, University of Connecticut.

Quasigroups and Loops (Code: AMS SS R1), Tuval S. Foguel, North Dakota State University, and J. D. Phillips, Wabash College.

Statistics (Code: AMS SS G1), Miguel A. Arcones, Anton Schick, and Qiqing Yu, Binghamton University.

Topological Combinatorics (Code: AMS SS Q1), Laura M. Anderson, Binghamton University, and Edward B. Swartz, Cornell University.

Chapel Hill, North Carolina
University of North Carolina at Chapel Hill
October 24–25, 2003
Meeting #991
Southeastern Section
Associate secretary: John L. Bryant
Announcement issue of Notices: August 2003
Program first available on AMS website: September 11, 2003
Program issue of electronic Notices: October 2003
Issue of Abstracts: Volume 24, Issue 4

Deadlines
For organizers: Expired
For consideration of contributed papers in Special Sessions:
July 19, 2003
For abstracts: September 3, 2003

Invited Addresses
James N. Damon, University of North Carolina, Title to be announced.
Erica L. Flapan, Pomona College, Title to be announced.
Mary Ann Horn, Vanderbilt University, Title to be announced.
Helmut Voelklein, University of Florida, Title to be announced.

Special Sessions
Algebras and Their Representations (Code: AMS SS M1), Edward L. Green, Virginia Polytech Institute & State University, and Ellen E. Kirkman, Wake Forest University.
Banach Algebras and Several Complex Variables (Code: AMS SS J1), John T. Anderson, College of the Holy Cross, and Alexander J. Izzo, Bowling Green State University.

Commutative Rings and Monoids (Code: AMS SS K1), Scott Chapman, Trinity University.
Current Topics in Optical Communications Systems (Code: AMS SS Q1), Rudy Horne and Tobias Schaefer, University of North Carolina.

Group Actions on Curves (Code: AMS SS A1), Kay Magaard, Wayne State University and University of Florida, and Helmut Voelklein, University of Florida.

Group Cohomology in Algebra and Geometry (Code: AMS SS E1), Richard M. Hain, Duke University, and Kevin P. Knudson, Mississippi State University.

Homological Physics (Code: AMS SS I1), Thomas J. Lada, North Carolina State University, and James Stasheff, University of North Carolina at Chapel Hill.

Knots, Links, and Embedded Graphs (Code: AMS SS C1), Joel S. Foisy, SUNY at Potsdam, and Erica L. Flapan, Pomona College.

Linear Operators on Function Spaces (Code: AMS SS G1), Nathan S. Feldman, Washington and Lee University, and William T. Ross, University of Richmond.

Mathematical Modeling in Physiology and Medicine (Code: AMS SS N1), Mary Ann Horn, Vanderbilt University.

Mathematical Molecular Biology (Code: AMS SS P1), Dorothy Buck, Brown University.

Measurable, Complex, and Symbolic Dynamics (Code: AMS SS D1), Jane M. Hawkins and Karl E. Petersen, University of North Carolina at Chapel Hill.

Nonlinear Wave Phenomena: Stability and Interactions (Code: AMS SS H1), Christopher Jones, University of North Carolina at Chapel Hill, and Bjorn Sandstede, The Ohio State University.

Invited Addresses

R. Balasubramanian, Institute for Mathematical Sciences, Title to be announced.

George C. Papanicolaou, Stanford University, Title to be announced.

M. S. Raghunathan, Tata Institute of Fundamental Research, Title to be announced.

Peter Sarnak, Princeton University and NYU, Courant Institute, Title to be announced.

K. B. Sinha, Indian Statistical Institute, Title to be announced.

Vladimir Voevodsky, Institute for Advanced Study, Title to be announced.

Special Sessions

Algebraic and Geometric Topology, Parameswaran Sankaran, Institute of Mathematical Sciences, and P. B. Shalen, University of Illinois.

Automorphic Forms and Functoriality, James Cogdell, Oklahoma State University, and T. N. Venkataramana, Tata Institute of Fundamental Research.

Cycles, K-Theory, and Motives, Eric M. Friedlander, Northwestern University, Steven Lichtenbaum, Brown University, Kapil Paranjape, Institute of Mathematical Sciences, and Vasudevan Srinivas, Tata Institute of Fundamental Research.

Differential Equations and Applications to Population Dynamics, Epidemiology, Genetics and Microbiology, Bindhyachal Rai, University of Allahabad, Sanjay Rai, Jacksonville University, Terrance Quinn, Ohio University Southern, and Sunil Tiwari, Sonoma State University.

L-Functions, Automorphic Forms and Cryptography, R. Balasubramanian, Institute of Mathematical Sciences, and K. Soundararajan, University of Michigan.

PDE and Applications, Susan B. Friedlander, University of Illinois, and P. N. Srikanth, Tata Institute of Fundamental Research.

Bangalore, India

Indian Institute of Science

December 17–20, 2003

Meeting #992

First Joint AMS-India Mathematics Meeting

Associate secretary: Susan J. Friedlander

Announcement issue of Notices: To be announced

Program first available on AMS website: Not applicable

Program issue of electronic Notices: Not applicable

Issue of Abstracts: Not applicable

Deadlines

For organizers: Expired

For consideration of contributed papers in Special Sessions: Not applicable

For abstracts: September 1, 2003
Meetings & Conferences

Probability Theory, Rajeeva Karandikar, Indian Statistical Institute, and Srinivasa R. S. Varadhan, NYU-Courant Institute.
Reductive Groups: Arithmetic, Geometry and Representation Theory, Vikram Mehta and R. Parimala, Tata Institute of Fundamental Research, and Gopal Prasad, University of Michigan, Ann Arbor.
Spectral and Inverse Spectral Theories of Schrödinger Operators, Peter David Hislop, University of Kentucky, and Krishna Maddaly, Institute of Mathematical Sciences.

Phoenix, Arizona
Phoenix Civic Plaza

January 7–10, 2004
Wednesday – Saturday

Meeting #993
Joint Mathematics Meetings, including the 110th Annual Meeting of the AMS, 87th Annual Meeting of the Mathematical Association of America (MAA), annual meetings of the Association for Women in Mathematics (AWM) and the National Association of Mathematicians (NAM), the winter meeting of the Association for Symbolic Logic (ASL), with sessions contributed by the Society for Industrial and Applied Mathematics (SIAM).
Associate secretary: Michel L. Lapidus
Announcement issue of Notices: October 2003
Program first available on AMS website: November 1, 2003
Program issue of electronic Notices: January 2004
Issue of Abstracts: Volume 25, Issue 1

Deadlines
For organizers: Expired
For consideration of contributed papers in Special Sessions:
August 6, 2003
For abstracts: October 1, 2003
For summaries of papers to MAA organizers: To be announced

Joint Invited Addresses
Bonnie Berger, Massachusetts Institute of Technology, Title to be announced (AMS-MAA Invited Address).
Stephen Wolfram, Wolfram Research Inc., Title to be announced (AMS-MAA Invited Address).

AMS Invited Addresses
Michael Aschbacher, California Institute of Technology, Title to be announced.
Hyman Bass, University of Michigan, Title to be announced (AMS Retiring Presidential Address).
Sun-Yang Alice Chang, Princeton University, Title to be announced (AMS Colloquium Lectures).

Gregory F. Lawler, Cornell University, Title to be announced.
James A. Yorke, University of Maryland, Title to be announced.

MAA Contributed Paper Sessions
The organizers listed below solicit papers pertinent to their sessions. Presentations are generally limited to ten minutes, but selected participants may extend their contributions up to twenty minutes. Please note that the dates and times scheduled for these sessions remain tentative. See the end of this announcement for specific submission procedures and other details.

Teaching a History of Mathematics Course (MAA CP A1), Wednesday morning, Joel K. Haack*, joel.haack@uni.edu, University of Northern Iowa; and Amy E. Shell-Gellasch, United States Military Academy. This session solicits papers on the teaching of history of mathematics courses. Papers can address courses at all levels and types, from general history courses for educators to topic-specific courses for majors. Special consideration will be given to papers that present ideas on how to organize and develop history of mathematics courses. Other topics such as ideas for units or Web usage will be considered.

Teaching Operations Research in the Undergraduate Classroom (MAA CP B1), Wednesday morning, Dipa Choudhury*, dipa.choudhury@loyola.edu, Loyola College, MD, and Steven M. Hetzler, Salisbury State University. This session seeks to highlight innovative teaching strategies in operations research in the undergraduate classroom. These strategies could include the construction of new teaching materials or creative use of existing materials. Submissions should provide specific learning objectives addressed by the use of these materials. In addition, potential speakers should provide some of the following information: (1) the syllabus of the course you teach, (2) a personal philosophy (with examples) of technology integration in the classroom, (3) interesting case studies, or (4) suggestions on textbooks and/or software.

Uses of the WWW That Enrich and Promote Learning (MAA CP C1), Wednesday and Saturday afternoons, Marcelle Bessman*, marcellle.bessman@jhu.edu; Marcia P. Birken, Rochester Institute of Technology; Mary L. Platt, Salem State College; and Brian E. Smith, McGill University. This session seeks to highlight uses of the Web and its tools that engage students in the learning process. Tools such as course management systems, digital resources, tutorial systems, and hybrids that combine these functions on the Web can make a difference in student engagement, understanding, and performance. Talks should demonstrate how these technologies are being integrated into the learning process. The session is sponsored by the MAA Committee on Computers in Mathematics Education (CCIME).

Mathematical Experiences for Students outside the Classroom (MAA CP D1), Wednesday morning, Laura L. Kelleher*, lkelleher@mma.mass.edu; and Mary S. Hawkins, Prairie View A&M University. Mathematics “happens” outside the classroom, and in fact many mathematics majors are drawn to the subject...
through an event sponsored by a student chapter or math club. This session seeks presentations by academic, industrial, business, or student mathematicians so that the audience will be encouraged to organize and run events for their students. Descriptions of nonclassroom activities could include, but are not limited to, special lectures, workshops for students, math days, math fairs, research projects for students, career days, recreational mathematics, problem-solving activities, and student consultants. This session is organized by the MAA Committee on Undergraduate Student Activities and Chapters.

Courses below Calculus: A New Focus (MAA CP E1), Wednesday afternoon and Thursday morning, Mary Robinson*, University of New Mexico, Valencia Campus, maryrobn@unm.edu; Florence S. Gordon, New York Institute of Technology; Arlene H. Kleinstei, SUNY at Farmingdale; Norma M. Agras, Miami Dade Community College; Laurette B. Foster, Prairie View A&M University; and Linda Martin, Albuquerque T-VI. An unprecedented collaborative effort is currently being developed among members of the MAA, AMATYC, and NCTM to launch a national initiative to refocus the courses below calculus to better serve the majority of students taking these courses. The goal of the initiative is to encourage courses that place much greater emphasis on conceptual understanding and realistic applications via mathematical modeling than traditional courses that too often are designed to develop algebraic skills needed for calculus. For this session we specifically seek to address all of the college-level courses below calculus, with particular emphasis on offerings in college algebra and precalculus. We seek presentations that present new visions for such courses, discuss implementation issues (such as faculty training, placement tests, introduction of alternative tracks for different groups of students, transferability problems, etc.) related to offering such courses, present results of studies on student performance and tracking data in both traditional and new versions of these courses and in follow-up courses, discuss the needs of other disciplines and the workplace from courses at this level, discuss connections to the changing school curricula and implications for teacher education. This session is cosponsored by the MAA CUPM Subcommittee on Curriculum Renewal Across the First Two Years (CRAFTY), the MAA Committee on Two Year Colleges, and the MAA Committee on Articulation and Placement.

Getting Students to Discuss and Write about Mathematics (MAA CP F1), Wednesday afternoon, Sarah L. Mabrouk*, Framingham State College, smabrouk@frc.mass.edu. This session invites papers about assignments and projects that require students to communicate mathematics through in-class oral presentations that they make or in-class discussions that they must lead and motivate and through written assignments and/or papers. These assignments can include analysis and applications of mathematics, presentations of and analysis of proofs, presentations about famous mathematicians and the mathematics that they studied, and assignments/projects that utilize creative writing. Each presenter is encouraged to discuss how the use of the assignment/project helped students to improve their understanding of mathematics and their ability to communicate mathematics. Of particular interest is the effect of such projects/assignments/presentations throughout the course on the students’ understanding of mathematics, their communication of mathematics, and their attitude toward mathematics.

The Effective Use of Computer Algebra Systems in the Teaching of Mathematics (MAA CP G1), Wednesday afternoon, L. Carl Leinbach*, Gettysburg College, leinbach@gettysburg.edu; and Edward A. Connors, University of Massachusetts. Computer Algebra Systems (CAS) create an environment for the learning and teaching of mathematics. They can be used to encourage mathematical explorations and to affect the way in which we teach and what material we emphasize. Papers for this session are to discuss one of the following topics: classroom uses of CAS, student projects that use the CAS in a significant way, testing practices that allow the students to use a CAS, or evaluations of the overall use of CAS at a particular institution. It is expected that each presentation, in addition to explaining the use of the CAS, will address the effectiveness of this use in the teaching and learning of mathematics. While proposals for papers dealing with the use of a CAS in any mathematics course are welcome, preference will be given to papers dealing with the use of a CAS in courses other than the calculus sequence. In particular, papers on the use of the CAS in courses such as applied statistics, college algebra, quantitative methods, and the mathematics preparation of teachers are particularly welcome. Note that this session is focused on the use of a CAS, not technology in general. However, the choice of a platform (computer or handheld device) or CAS (Derive, Maple, Mathematica, or other CAS) is that of the presenter.

Placement Strategies (MAA CP H1), Thursday morning, Janet P. Ray*, Seattle Central Community College, janray@sccd.ctc.edu; Susan L. Forman, Bronx Community College, CUNY; and Patricia R. Wilkinson, Borough of Manhattan Community College, CUNY. Proper placement of students into their first college mathematics class is important to students and faculty alike. This session invites papers that describe placement strategies and instruments that you are using or have used at your institution. Papers might deal with uses of homegrown or standardized instruments, non-test-based strategies, or innovative, multilayered approaches. Also invited are papers describing how the success of your placement strategy is measured. How do you know if it is working? Systems in place at any type of institution or at any mathematics level are welcome. This session is cosponsored by the MAA Committee on Two-Year Colleges and the MAA Committee on Articulation and Placement.

Chaotic Dynamics and Fractal Geometry (MAA CP I1), Thursday morning, Denny Gulick*, University of Maryland, dng@math.md.edu; and Jon Scott, Montgomery College. During the past decade and a half, the areas of chaotic dynamics and fractal geometry have emerged as lively subjects not only for research but also in the undergraduate curriculum. One of the wonderful features of these subjects is that they are able to combine many of the fundamental undergraduate topics, among them calculus and analysis,
differential equations, linear algebra, geometry, statistics, and computer science. This session invites papers that investigate the impact of these two fields on undergraduate mathematics. The papers, which should have an expository flavor, might include new developments in either chaos or fractals (or both), interesting or novel applications, undergraduate research experiences, or innovative approaches for exploring these topics in undergraduate mathematics.

Truth in Using the History of Mathematics in Teaching Mathematics (MAA CP J1), Thursday morning, Victor J. Katz*, University of the District of Columbia, vkatz@udc.edu; and Eissso J. Atzema, University of Maine. The history of mathematics has long been accepted as a scholarly activity for its own sake. Increasingly, historical research is called upon by a wide variety of professionals within the mathematical community to serve a broad range of agendas. We seek contributions from mathematicians, mathematics historians, and mathematics educators at all levels that address the issue of “truth” in the use of the history of mathematics. In particular, contributions are welcome that consider three particular issues: (1) whether and/or how myths and legends can be effectively used as such in the mathematics classroom, (2) what role the examination of myths and legends might play in a history of mathematics course, and (3) how the mathematics history community can contribute toward the effective use of history by “consumers” of history. This session is sponsored by the MAA History of Mathematics Special Interest Group (HOM SIGMAA).

Innovations in Teaching Discrete Mathematics (MAA CP K1), Thursday afternoon, William E. Fenton*, Bellarmine University, wfen@bellarmine.edu; and Nancy L. Hagelgans, Ursinus College. Discrete mathematics is offered in many mathematics departments, at different levels, for different audiences, and with different expectations. This session seeks presentations on novel approaches to the teaching of discrete mathematics. These could be exploratory activities, application projects, interdisciplinary courses, etc. We particularly encourage presentations on the use of technology as a teaching tool or as a source of interesting problems and applications. Evaluation of the pedagogy is welcome though not mandatory.

Initiating and Sustaining Undergraduate Research Projects and Programs (MAA CP L1), Thursday afternoon, James A. Davis*, University of Richmond, jdavis@richmond.edu; and Joel S. Foisy, State University of New York. Papers are requested describing undergraduate research programs. Of particular interest will be descriptions of innovative ways to get administrative support or other support that creates a sustainable program. Also of interest will be papers indicating where to find appropriate problems and how to gauge the right level. This session is sponsored by the MAA CUPM Subcommittee on Research by Undergraduates.

Mathlets for Teaching and Learning Mathematics (MAA CP M1), Thursday afternoon, David M. Strong*, Pepperdine University; David.Strong@pepperdine.edu; Thomas E. Leathrum, Jacksonville State University; and Joe Yanik, Emporia State University. This session seeks to provide a forum in which presenters may demonstrate mathlets and related materials that they have created or further developed. Mathlets are small computer-based (but ideally platform-independent) interactive tools for teaching math, frequently developed as World Wide Web materials such as scripts or Java applets, but there may be many other innovative variations. Mathlets allow students to experiment with and visualize a variety of mathematical concepts, and they can be easily shared by mathematics instructors around the world. The session is sponsored by the MAA Committee on Computers in Mathematics Education (CCIME).

Statistics Education Discourse on Inference (MAA CP N1), Friday morning, John D. McKenzie Jr.*, Babson College, mckenzie@babson.edu; and Carolyn K. Cuff, Westminster College. Since the introductory statistics courses have infused data-driven activities into the course, many learning difficulties related to data have been minimized. However, the area of inference, a major topic in the course, remains a stumbling block for students. Papers are solicited which demonstrate effective teaching on inference topics, including confidence intervals, hypothesis testing, power and the interpretation of results. Sponsored by the MAA Statistics Special Interest Group (STAT SIGMAA).

Math and the Arts (MAA CP O1), Friday morning, Ann Robertson*, Connecticut College, arob@conncoll.edu; John M. Sullivan, University of Illinois, Urbana; Reza Sarhangi, Towson University; and Nathaniel A. Friedman, State University of New York, Albany. This session seeks interdisciplinary abstracts related to mathematics and one or more of the following disciplines: archeology and related fields, architecture, dance, music, literature, theater, film, and the visual arts. Session objectives include: (1) to present topics or new findings relating mathematics to its artistic and aesthetic presentations and (2) to introduce innovative techniques and to demonstrate the use of technology in promoting connections and interdisciplinary work in math and the arts.

Applications of Mathematics in Computer Science (MAA CP P1), Friday morning, William A. Marion*, Valparaiso University, Bill.Marion@valpo.edu. This session invites papers which illustrate examples of the application of mathematics or mathematical thinking to topics introduced in an undergraduate computer science curriculum. These examples should be presented in such a way that they can be used as a lecture example, an in-class assignment, a homework assignment, or a project by instructors who teach courses in computer science. Examples for use in the following categories of courses will be considered—discrete mathematics courses, CS I- and II-type courses, and all other computer science courses—and should be of a type which supplements the material in a standard text (or which presents a topic in a novel way). As a follow-up to this session, particularly interesting examples will be given consideration for entry into an online repository.

Mathematics Experiences in Business, Industry and Government (MAA CP Q1), Friday morning, Philip E. Gustafson*, Mesa State College, pgustafs@mesastate.edu; and Michael G. Monticino, University of North Texas. This paper session will provide a forum for mathematicians with experience in business, industry, and government (BIG) to
present papers or discuss projects involving the application of mathematics to BIG problems. BIG mathematicians as well as faculty and students in academia who are interested in learning more about BIG practitioners, projects, and issues will find this session of interest. This session is sponsored by the MAA Special Interest Group in Business, Industry and Government (BIG SIGMAA).

Teaching and Learning of Undergraduate Mathematics (MAA CP R1), Friday afternoon and Saturday morning, Anne E. Brown*, Indiana University South Bend, abrown@iusb.edu; Marilyn P. Carlson, Arizona State University; and Draga D. Vidakovic, Georgia State University. Research papers that address issues concerning the teaching and learning of undergraduate mathematics are invited. Appropriate for this session are theoretical or empirical investigations conducted within clearly defined theoretical frameworks using either qualitative or quantitative methodologies. Of highest priority are proposals that report on completed studies which further existing work in the field. Sponsored by the MAA Research in Undergraduate Mathematics Education Special Interest Group (RUME SIGMAA).

My Favorite Demo: Innovative Strategies for Mathematics Instructors (MAA CP S1), Friday afternoon and Saturday morning, David R. Hill*, Temple University, hill@math.temple.edu; and Lila F. Roberts, Georgia Southern University. Mathematics instructors use a myriad of innovative techniques for teaching mathematical concepts. Technology readily available in colleges and universities has provided a means to boost creativity and flexibility in lesson design. Tools an instructor utilizes may include specialized computer applications, animations and other multimedia tools, java applets, physical devices, games, etc. This contributed paper session will focus on novel demos that mathematics instructors have successfully used in their classrooms. Rather than focus on projects or student group activities, this contributed paper session will focus on the instructor’s activities to facilitate learning. Mathematical content areas will include precalculus, calculus, elementary probability, and selected postcalculus topics. This session invites 1) demos that introduce a topic, 2) demos that illustrate how concepts are applicable, 3) demos that tell a story or describe the development of a procedure, and 4) demos that lead to an activity that involves the class. Presenters of demos are encouraged to give the demonstration, if time and equipment allow, and to discuss how to use it in a classroom setting. Proposals should describe how the demo fits into a course; the use of technology or technology requirements, if any; and the effect of the demo on student attitudes toward mathematics.

Mathematical Models of the Environment (MAA CP T1), Friday afternoon, Karen D. Bolinger*, Clarion University, kbolinge@clarion.edu; William D. Stone, New Mexico Institute of Mining and Technology; and Ahlam E. Tannouri, Morgan State University. We invite presentations that deal with all aspects of using mathematics to model problems of the environment. Presentations are welcome that deal with exposition, pedagogy, or elementary modeling and that are suitable for college-level mathematics classes. Also welcome are presentations that deal with student research efforts, senior capstone experiences, group projects, and applications of higher mathematics, whether they fit within any course, weave through many mathematics courses, or stretch across departmental boundaries. Talks especially valued are those that make practical suggestions concerning how to establish fruitful communication between mathematicians and applied scientists and how to stimulate mathematics students into thinking about real world problems in terms of the mathematics they study. This session is sponsored by the MAA Environmental Mathematics Special Interest Group (ENVIRON SIGMAA) and the MAA Committee on Mathematics and the Environment.

Philosophy of Mathematics (MAA CP U1), Friday afternoon, Roger A. Simons*, Rhode Island College, rsimons@ric.edu; and Satish C. Bhatnagar, University of Nevada, Las Vegas. This session invites papers on any topic in the philosophy of mathematics except logic and set theory. Possible topics include the nature of mathematics, the nature of mathematical objects, the nature of mathematical knowledge, the relation between mathematics and the physical world, and the role of esthetics in the development of mathematics.

Focus on Integrating Graphic Handhelds into Collegiate Mathematics (MAA CP V1), Saturday morning, Charles E. Hofmann*; LaSalle University, hofmann@lasalle.edu; and Joseph R. Fiedler, California State University Bakersfield. The appropriate use of technology, graphic calculators, algebra-capable calculators, and data collection devices in the mathematics classroom has been the center of much debate. Few are neutral regarding the use of these devices. The pervasive use by students complicates testing and opens the field to novel and focused assessment activities. This session invites papers about the full range of handheld devices and their classroom uses. Presenters are encouraged not only to share their classroom activities but also to discuss how these activities fit into the overall structure of their courses and curricula. Papers for this session are to discuss one or more of the following topics: classroom uses of handheld technologies, evaluations of their overall use at a particular institution, strategies for their effective incorporation into large lectures or into service courses, use of handheld technologies in significant ways in student projects and laboratories, and cross-disciplinary collaborations exploiting these technologies.

Mathematics and Sports (MAA CP W1), Saturday morning, Sean L. Forman*, Saint Joseph’s University, sforman@sju.edu; and Douglas Drinen, University of the South. When applied to the sporting arena, mathematics can provide both compelling classroom examples and interesting research problems. Baseball has long been mined for interesting statistics examples, ranging from regression and probability to the game-theoretic aspects of in-game strategy. Recent books on jai alai, football, and a few other sports have studied those sports through a mathematical lens. The economics of sports is now covered by its own journal, and the statistics publication Chance routinely discusses statistical examples from sporting events. This session invites papers describing interesting classroom
examples utilizing examples from sports and papers discussing the application of mathematics to sporting events.

\textit{Technology in Mathematics Teacher Preparation Courses} (MAA CP X1), Saturday afternoon, Mary Ann Connors*, Westfield State College, mconnors@foma.wsc.ma.edu; and Christine Browning, Western Michigan University, Kalamazoo. Preparing teachers to use technology appropriately is a challenging task for teacher-educators. Handheld computer algebra systems, graphing calculators, spreadsheets, and other computer software are popular tools for facilitating numerical investigations, connecting mathematics topics, and incorporating multiple representations of various meaningful problems. Such explorations lead to students’ better understanding of mathematical concepts while empowering them to analyze practical problems. This session invites papers presenting ways in which we can prepare preservice teachers to use and develop meaningful activities that will engage their future students in mathematical thinking facilitated by technological tools. Papers that present curriculum revisions concentrating on meaningful technology use within courses that focus on mathematical content for preservice teachers are also encouraged. It is the hope that these curriculum revisions and/or activities will serve as a catalyst for class discussions of issues connected with K–12 curriculum and instruction, national and state standards, sequencing of topics, the role of technology, and assessment.

\textit{Strategies That Work to Positively Change Student Attitudes toward Mathematics} (MAA CP Y1), Saturday afternoon, Caren L. Diefenderfer*, Hollins University, cdfiefenderfer@hollins.edu; Janet L. Andersen, Hope College; and Elizabeth G. Yanik, Emporia State University. We solicit papers that describe strategies, both in and out of the classroom, which demonstrate a positive impact on student attitudes toward, and perceptions of, mathematics. These may be strategies incorporated in math courses that general education students are “forced” to take or strategies used in courses designed for majors. In addition, talks may emphasize departmental activities that have helped to create a positive esprit de corps and talks that address encouraging members of underrepresented groups are particularly welcome. Our concern is that many students (including mathematics majors) leave our programs with negative attitudes toward mathematics. We are also concerned that there are potential majors that we are not reaching, because we are not adequately conveying the benefits and satisfaction of doing mathematics. This may be particularly true of underrepresented groups. We would like the mathematics community to be aware of successful strategies that can be modified for use in our individual programs which will help students to learn, experience, and believe in the joy and magic of mathematics. We are also interested in the question of how to cultivate a mathematically appreciative society. In particular, how can such strategies be used to attract and retain more minority students in mathematics courses?

\textit{General Contributed Paper Session} (MAA CP Z1), Wednesday, Thursday, and Saturday afternoons, Laura J. Wallace*, California State University San Bernardino, wallace@csusb.edu. Papers may be presented on any mathematical topic. Papers that fit into one of the other sessions should be sent to that organizer, not to this session. Any paper that cannot be accommodated in one of the named contributed paper sessions will be diverted automatically to this session; therefore, papers should not be sent to more than one session organizer.

\textbf{Submission Procedures for MAA Contributed Papers}

Send a detailed one-page summary of your paper by email directly to the organizer indicated with an asterisk (*) no later than September 9, 2003; concurrently, submit your abstract directly to the AMS (see below for instructions). In order to enable the organizer(s) to evaluate the appropriateness of your paper, include as much detailed information as possible within the one-page summary limitation. The AMS will publish abstracts for MAA talks. These will be available online about two months before the meeting, and paper copy will be available onsite to registered participants. Abstracts must be submitted on the appropriate AMS form within stated limits and NO LATER THAN OCTOBER 1. Electronic submission is available via the Internet or email. No technical knowledge of \LaTeX{} is necessary for submission; however, \LaTeX{} and \texttt{AAMS-\LaTeX{}} are the only typesetting systems that can be used if display mathematics is used or special formatting is desired. To see descriptions and to view the electronic templates available, visit the abstracts submission page at http://www.ams.org/abstracts/instructions.html, or send email to: abs-submit@ams.org, typing HELP as the subject line. Abstracts submitted electronically are quickly either acknowledged, with a unique abstract number assigned to the presentation; or rejected, with a short message on what information is missing or inappropriate. All questions concerning the submission of abstracts should be addressed to abs-coord@ams.org. The EVENT CODE is the seven characters appearing in the title description shown above, e.g., MAA CP A1. The SUBJECT CODE (required in the electronic template) is the last two-character letter/number combination from the event code list, i.e., A1.

Audiovisual equipment available for MAA talks: Each session room contains an overhead projector and screen; blackboards will not be available. Persons needing additional equipment should contact, as soon as possible and DEFINITELY PRIOR TO SEPTEMBER 9, 2003, the session organizer whose name is followed by an asterisk (*).

\textbf{Tallahassee, Florida}

\textit{Florida State University}

\textbf{March 12–13, 2004}

\textbf{Meeting #994}

Southeastern Section

Associate secretary: John L. Bryant

Announcement issue of Notices: To be announced

Program first available on AMS website: To be announced

Program issue of electronic Notices: To be announced
Issue of Abstracts: To be announced

Deadlines
For organizers: August 13, 2003
For consideration of contributed papers in Special Sessions: November 25, 2003
For abstracts: January 20, 2004

Athens, Ohio
Ohio University
March 26–27, 2004

Meeting #995
Central Section
Associate secretary: Susan J. Friedlander
Announcement issue of Notices: To be announced
Program first available on AMS website: To be announced
Program issue of electronic Notices: To be announced
Issue of Abstracts: To be announced

Deadlines
For organizers: August 26, 2003
For consideration of contributed papers in Special Sessions: December 9, 2003
For abstracts: February 3, 2004

Invited Addresses
Mario Bonk, University of Michigan, Title to be announced.
Irene Gamba, University of Texas, Title to be announced.
R. I. Grigorchuk, Texas A&M University, Title to be announced.
Eric Zaslow, Northwestern University, Title to be announced.

Special Sessions
Algebraic Coding Theory (Code: AMS SS H1), Marcus Greferath, San Diego State University, and Sergio R. López-Permou, Ohio University.
Differential Equations and Control Theory (Code: AMS SS A1), Sergiu Aizicovici and Nicolai Pavel, Ohio University.
Dynamical Systems (Code: AMS SS C1), Patrick D. McSwiggen, University of Cincinnati, and Todd Young, Ohio University.
Groups, Representations, and Characters (Code: AMS SS B1), Mark Lewis, Kent State University, and Thomas R. Wolf, Ohio University.
Linear Algebra and its Applications (Code: AMS SS F1), S. K. Jain, Ohio University, and Michael Neumann, University of Connecticut.
Statistics and Probability (Code: AMS SS G1), Maria Rizzo and Vladimir Vinogradov, Ohio University.

Los Angeles, California
University of Southern California
April 3–4, 2004

Meeting #996
Western Section
Associate secretary: Michel L. Lapidus
Announcement issue of Notices: To be announced
Program first available on AMS website: To be announced
Program issue of electronic Notices: To be announced
Issue of Abstracts: To be announced

Deadlines
For organizers: September 3, 2003
For consideration of contributed papers in Special Sessions: December 16, 2003
For abstracts: February 10, 2004

Invited Addresses
Dan Boneh, Stanford University, Title to be announced.
Maria E. Schonbek, University of California Santa Cruz, Title to be announced.
Paul Smith, University of Washington, Noncommutative Algebraic Geometry.
Christopher Martin Thiele, University of California Los Angeles, Title to be announced.

Special Sessions
Contact and Symplectic Geometry (Code: AMS SS A1), Dragomir Dragnev, Ko Honda, and Sang Seon Kim, University of Southern California.

Lawrenceville, New Jersey
Rider University
April 17–18, 2004

Meeting #997
Eastern Section
Associate secretary: Lesley M. Sibner
Announcement issue of Notices: To be announced
Program first available on AMS website: To be announced
Program issue of electronic Notices: To be announced
Issue of Abstracts: To be announced

Deadlines
For organizers: September 17, 2003
For consideration of contributed papers in Special Sessions: December 30, 2003
For abstracts: February 24, 2004
Invited Addresses

Dennis Sullivan, City College (CUNY), *Title to be announced.*

Special Sessions

*Algebraic Geometry and Mirror Symmetry* (Code: AMS SS D1), **Ciprian Borcea**, Rider University.

*Geometry of Protein Modelling* (Code: AMS SS E1), **Ileana Streinu**, Smith College, and **Jack Snoeyink**, University of North Carolina at Chapel Hill.

*Homotopy Theory, a Special Session in Honor of Bill Browder’s 70th Birthday* (Code: AMS SS C1), **Martin Bendersky**, Hunter College, and **Donald Davis**, Lehigh University.

*Strings and Branes* (Code: AMS SS F1), **Thomas P. Branson**, University of Iowa, and **S. James Gates**, University of Maryland.

*Surgery, a Special Session in Honor of Bill Browder’s 70th Birthday* (Code: AMS SS H1), **Frank S. Quinn**, Virginia Polytech Institute & State University.

*Tomography and Integral Geometry* (Code: AMS SS B1), **Andrew Markoe**, Rider University, and **Eric Todd Quinto**, Tufts University.
