J. A. WOLF

VOLUME 18, NUMBER 3

JUNE, 1967

PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY
PROVIDENCE, RHODE ISLAND

Journals Published by the American Mathematical Society

Proceedings of the American Mathematical Society

The PROCEEDINGS of the American Mathematical Society is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The maximum length of an acceptable paper is about 8 printed pages. (Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.) The *Manual for Authors*, available from the Society, should be consulted for symbols and style conventions. The authors should keep a complete copy of the manuscript, and should take the greatest possible care in preparing the original manuscript; hand drawn mathematical symbols are entirely satisfactory, if clearly done.

Very short notes (not to exceed 1 printed page) of an unusual nature are also accepted, and appear under the heading SHORTER NOTES. (Items deemed suitable include an elegant new proof of an important and well known theorem, an illuminating example or counterexample, or a striking synthesis of familiar results.)

Papers in algebra and number theory should be sent to ARTHUR MATTUCK, Room 2-275, Mathematics Department, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, or to IRVING REINER, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

Papers in modern or classical analysis should be sent to R. C. BUCK, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706, or to MAURICE HEINS, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

Papers in geometry or topology should be sent to ELDON DYER, Graduate Studies Division, City University of New York, 33 West 42nd Street, New York, New York 10036.

Papers in applied mathematics, differential equations, and related areas of analysis should be sent to WOLFGANG WASOW, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in probability, statistics, and related fields should be sent to JOSHUA CHOVER, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706.

Papers in logic, set theory, and related areas should be sent to W. W. BOONE, Mathematics Department, University of Illinois, Urbana, Illinois 61801.

All other communications should be addressed to the Managing Editor, M. H. HEINS, at the above address.

Inquiries from authors regarding reprints, or changes of addresses for mailing proofs, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02904.

One volume of six issues is planned for 1967. The subscription price is \$12.00. Back issues (Vols. 1-17, 1950-1966) are available at the price of \$14.00 each.

The American Mathematical Society also publishes the BULLETIN and the TRANSACTIONS of the Society. Both accept research papers; for details, and the list of editors, please consult a recent issue. A complete list of the publications of the American Mathematical Society is available from the Editorial Office.

The PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published bimonthly, in February, April, June, August, October, and December. Price per annual volume is \$12.00. Subscriptions, orders for back numbers, and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, P. O. Box 6248, Providence, R. I. 02904.

Second-class postage paid at Providence, Rhode Island and additional mailing offices. Authorization is granted under the authority of the act of August 24, 1912, as amended by the act of August 4, 1947 (sec. 34.21, P. L. & R.). Acceptance for mailing at the special rate of postage provided for in section 34.40, paragraph d., P. L. & R.

Contents—Continued from back cover

On the proximal relation being closed. By H. B. KEYNES.....	518
Steenrod representability of stable homology. By P. S. LANDWEBER ...	523
Which multiplicative sequences are modified Chern classes? By ARUNAS LIULEVICIUS.....	530
Kernels of free Abelian representations of a link group. By C. B. SCHAUFELLE.....	535
Clans on group-supporting spaces. By J. SELDEN and B. MADISON...	540
A simple proof of a theorem of Isbell. By A. KRUSE.....	546
A note on the Galois theory of linear homogeneous difference equa- tions. By C. H. FRANKE.....	548
A note on absolutely free algebras. By K.-H. DIENER and G. GRÄTZER.....	551
The weak radical of a ring. By Kwangil Koh and A. C. MEWBORN.....	554
Grothendieck groups and divisor groups. By ROBERT M. FOSSUM....	560
Linear transformations that preserve the permanent. By PETER BOTTA.....	566

SHORTER NOTES

A short and elementary proof that a product of spheres is parallelizable if one of them is odd. By E. B. STAPLES.....	570
On convex combinations of Blaschke products. By R. C. SINE.....	571
Representations of polycyclic groups. By R. G. SWAN.....	573

CONTENTS

Vol. 18, No. 3

JUNE, 1967

Whole No. 105

	Page
On the asymptotic behavior of solutions of an n th-order nonlinear equation. By PHIL LOCKE.	383
The asymptotic behavior of a solution of the third order differential equation. By J. D. SCHUUR.	391
An elementary proof of integration by parts for the Perron integral. By LOUIS GORDON and SIM LASHER.	394
Some nonlinear Tauberian theorems. By HARRY POLLARD.	399
Dual functions and heat expansions. By L. R. BRAGG.	402
On iterates of continuous functions on a unit ball. By HASKELL COHEN and JACK HACHIGIAN.	408
Growth estimates of convex functions. By MARK FINKELSTEIN.	412
A proof of the power series expansion without differentiation theory. By A. J. MACINTYRE and W. J. WILBUR.	419
Projective topological groups. By C. E. HALL.	425
Asymptotic expansions in a nonhomogeneous differential equation. By T. G. HALLAM.	432
On Gronwall's inequality. By S. C. CHU and F. T. METCALF.	439
Equations equivalent to nonlinear differential equations. By J. F. DESPAUTZ and R. A. LERMAN.	441
A limit-point criterion for nonoscillatory Sturm-Liouville differential operators. By HERBERT KURSS.	445
On Carleman integral operators. By GY. I. TARGONSKI.	450
The minimum miss distance problem. By T. F. BRIDGLAND, Jr. and J. S. HINKEL.	457
Orthogonal series and probability. By DAN EUSTICE.	465
Simultaneous Chebyshev approximation of functions on an interval. By C. B. DUNHAM.	472
Creative and weakly creative sequences of r.e. sets. By V. D. VUCKOVIC.	478
On a paper of Phelps. By ROBERT SINE.	484
Bounded polymasures and associated translation commutative polynomial operators. By D. R. BRILLINGER.	487
A note on Bernstein polynomial type approximations. By D. H. TUCKER.	492
Functions whose higher powers are orthogonal to a given function. By BURTON RANDOL and NEIL RICKERT.	495
An unbounded inverse property in the algebra of absolutely convergent Fourier series. By J. D. STAFNEY.	497
On the closure of the numerical range of an operator. By S. K. BERBERIAN and G. H. ORLAND.	499
An inequality for probabilities. By D. A. DAWSON and D. SANKOFF.	504
Lebesgue measure of parts for $R(X)$. By D. R. WILKEN.	508
On the existence of slices for transformation groups. By HSIN CHU.	513
