## ERRATA, VOLUME 17

Harold Widom and Herbert Wilf, *Small eigenvalues of large Hankel matrices*, pp. 338–344.

In the formula for $\log|A(\rho e^{i\phi})|$ on p. 339 the factor $1/2\pi$ should be $1/4\pi$.

The last formula on p. 344 should read

$$\lambda_N \sim \pi^{3/2}(8 + 6\cdot 2^{1/2})^{5/2}N^{1/2}(1 + 2^{1/2})^{-4N-9}.$$

## ERRATA, VOLUME 17

Sam B. Nadler, Jr., *A characterization of the differentiable submanifolds of $R^n$*, pp. 1350–1352.

The last paragraph of the proof of Theorem 1 should be replaced by:

If $H = h^{-1}\big|_{\overline{W}\cap\overline{W}'}$, then $(W\cap W', H)$ is a coordinate system of $R^n$ such that $H(W\cap W'\cap f(U)) = H(W')\cap H(W\cap f(U)) = H(W') \cap H(W \cap f(W)) = H(W') \cap H(W) \cap H(f(W)) = H(W') \cap H(W) \cap H(h(f_0(g(W)))) = H(W') \cap H(W) \cap H(h(I^r)) = H(W') \cap H(W) \cap h^{-1}(W\cap W')\cap I^r$, where $I^r = \{(x_1, x_2, \cdots, x_n)\in I^n : x_i = 0$ for $r < i \leqq n\}$ (note that, since $W\subset V$ and $V$ was actually assumed to be a subset of $U$, $W\subset U$ and thus $f(W) = h(f_0(g(W)))$). Hence, there is a covering of $f(U)$ by coordinate systems of $R^n$ of type $(W\cap W', H)$ such that $H(W\cap W'\cap f(U))$ is an open subset of $R^r$. This proves that $f(U)$ is a class $C^1$ differentiable submanifold of $R^n$ of dimension $r$, as defined in [**3**, p. 15].

## ERRATA, VOLUME 19

Clifford C. Brown, *On the finite measures on the closed subspaces of a Hilbert space*, pp. 470–472.

The mapping $\phi$: $\bar{f} \to A\bar{f}$ is not one-to-one. The main result of the paper is invalid.

## ERRATA, VOLUME 19

David Henderson and G. R. Livesay, *Another generalization of Brouwer's fixed point theorem*, pp. 176–177.

Richard B. Thompson pointed out to the authors that the reference on p. 176, line 5 −, to "[2, p. 322]" should be replaced by "[7]." See [7] and [8] for a discussion of the problem.
