

PROCEEDINGS
OF THE
AMERICAN MATHEMATICAL SOCIETY

EDITED BY
FRED G. BRAUER
W. H. J. FUCHS
IRVING GLICKSBERG
ERNEST A. MICHAEL
JOSEPH J. ROTMAN
GEORGE B. SELIGMAN
EMERY THOMAS

WITH THE COOPERATION OF
W. W. Boone
Joshua Chover
Allen Shields

VOLUME 27, NUMBER 3
MARCH, 1971

CODEN: PAMYAR

PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY
PROVIDENCE, RHODE ISLAND

Proceedings of the American Mathematical Society

THIS JOURNAL is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. The maximum length of an acceptable paper is about 8 printed pages. Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.

SHORTER NOTES. Very short notes not to exceed 1 printed page of an unusual nature are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

PREPARATION OF THE MANUSCRIPT. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The *Manual for Authors*, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary.

FORM OF MANUSCRIPT. The first page should consist of a *descriptive title*, followed by an *abstract* which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The *abstract* should be at least one complete sentence, and at most 150 words. Included with the footnotes to your paper, but placed before the first footnote, there should be first the AMS (MOS) *subject classification numbers* representing the primary and secondary subjects of the article, followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

SUBMISSION OF MANUSCRIPTS, REPRINTS AND ADDRESS CHANGES. See the last page of this issue.

SUBSCRIPTION INFORMATION. Five volumes are planned for 1971. The subscription price is \$72. Back issues of Volumes 1-16 are available at a price of \$14 each. Volumes 17-19 at a price of \$18 each, and Volumes 20-26 at a price of \$30 each.

THE PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscriptions, orders for back numbers and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, P. O. Box 6248, Providence, R.I. 02904.

Second-class postage paid at Providence, Rhode Island, and additional mailing offices.

INDEX TO VOLUME 27

SUBJECT INDEX

*Starred items are "Shorter Notes"

A. ALGEBRA AND THEORY OF NUMBERS

05. Combinatorics

- Chvátal, V. *Hypergraphs and Ramseyian theorems*, 434.
 Clements, G. F. *Sets of lattice points which contain a maximal number of edges*, 13.
 Schwartz, Benjamin L. and Beineke, Lowell W. *Locally finite self-interchange graphs*, 8.

06. Order, Lattices, Ordered Algebraic Structures

- Davies, Roy O., Hayes, Allan and Rousseau, George. *Complete lattices and the generalized Cantor theorem*, 253.
 Morash, Ronald P. *The orthomodular identity and metric completeness of the coordinatizing division ring*, 446.

10. Number Theory

- Cusick, T. W. *Sums and products of continued fractions*, 35.
 Rice, Bart. *Quaternions and binary quadratic forms*, 1.
 Subbarao, M. V. *On a partition theorem of MacMahon-Andrews*, 449.

12. Algebraic Number Theory, Field Theory and Polynomials

- Coleman, D. B. and Enochs, E. E. *Isomorphic polynomial rings*, 247.
 Flaschka, Hermann. *An asymptotic property of the roots of polynomials*, 451.
 Greenleaf, Newcomb. *Fields in which varieties have rational points: A note on a problem of Ax*, 139.

13. Commutative Rings and Algebras

- Arnold, J. T. and Brewer, J. W. *Kronecker function rings and flat $D[X]$ -modules*, 483.
 Evans, E. Graham, Jr. *Projective modules as fiber bundles*, 623.
 Fields, David E. *Zero divisors and nilpotent elements in power series rings*, 427.
 Kohn, S. and Newman, D. J. *Multiplication from other operations*, 244.
 Ramras, Mark. *On the vanishing of Ext*, 457.
 Reid, James L. *An exact solution of the nonlinear differential equation $\ddot{y} + p(t)y = q_m(t)/y^{2m-1}$* , 61.

14. Algebraic Geometry

- Greenleaf, Newcomb. *Fields in which varieties have rational points: A note on a problem of Ax*, 139.

15. Linear and Multilinear Algebra, Matrix Theory (finite and infinite)

- Djoković, D. Ž. *A determinantal inequality for projectors in a unitary space*, 19.
 Gibson, P. M. *Conversion of the permanent into the determinant*, 471.
 Hartfiel, D. J. *On constructing nearly decomposable matrices*, 222.
 Sinkhorn, Richard. *Linear transformations under which the doubly stochastic matrices are invariant*, 213.

16. Associative Rings and Algebras

- Alin, J. S. *A primary decomposition for torsion modules*, 43.
 Bruning, L. M. and Leavitt, W. G. *Minimal generating sets for free modules*, 441.
 Coleman, D. B. and Enochs, E. E. *Isomorphic polynomial rings*, 247.

- Montgomery, Susan. *Polynomial identity algebras with involution*, 53.
 Tepley, Mark L. *Torsionfree projective modules*, 29.
 Wickless, William J. *Rings with the contraction property*, 57.
 Woods, S. M. *On perfect group rings*, 49.
18. **Category Theory, Homological Algebra**
 Davis, Robert. *Semiadjoint functors and quintuples*, 477.
 Tepley, Mark L. *Torsionfree projective modules*, 29.
20. **Group Theory and Generalizations**
 Cossey, John and Whittemore, Alice. *Addendum to "On the Frattini subgroup"*, 63.
 Faudree, R. *Groups in which each element commutes with its endomorphic images*, 236.
 Gilman, Robert. *Complements to solvable Hall subgroups*, 241.
 Hill, Paul. *A note on extensions of free groups by torsion groups*, 24.
 Kotzen, Marshall. *On the structure of a finite solvable K-group*, 16.
 Krause, Eugene F. and Weston, Kenneth W. *On the Lie algebra of a Burnside group of exponent 5*, 463.
 Macdonald, I. D. *Solution of the Hughes problem for finite p-groups of class $2p-2$* , 39.
 Weaver, J. R. *Solvable automorphism groups and an upper bound for $|A(G)|$* , 229.
 Wolf, Joseph A. *A commutativity criterion for closed subgroups of compact Lie groups*, 619.
 Woods, S. M. *On perfect group rings*, 49.

B. ANALYSIS

26. Real Functions

- Darst, R. B. *C^∞ functions need not be bimeasurable*, 128.
 ———. *A characterization of bimeasurable functions in terms of universally measurable sets*, 566.
 Frolík, Zdeněk. *Stone-Weierstrass theorems for $C(X)$ with the sequential topology*, 486.
 Hughes, Robert B. *Zero sets of functions from non-quasi-analytic classes*, 539.
 Lahiri, Maya. *On a generalisation of Hermite polynomials*, 117.

28. Measure and Integration

- Baxter, J. R. *A class of ergodic transformations having simple spectrum*, 275.
 Darst, R. B. *C^∞ functions need not be bimeasurable*, 128.
 ———. *A characterization of bimeasurable functions in terms of universally measurable sets*, 566.
 Frolík, Zdeněk. *Stone-Weierstrass theorems for $C(X)$ with the sequential topology*, 486.
 Johnson, G. W. and Skoug, D. L. *An operator valued function space integral: A sequel to Cameron and Storvick's paper*, 514.

30. Functions of a Complex Variable

- Causey, W. M. *The univalence of an integral*, 500.
 Kra, Irwin. *A generalization of a theorem of Poincaré*, 299.
 Merkes, E. P. and Wright, D. J. *On the univalence of a certain integral*, 97.
 Saff, E. B. and Twomey, J. B. *A note on the location of critical points of polynomials*, 303.

31. Potential Theory

Boehme, T. K. and Weiss, Max L. *One-sided boundary behavior for certain harmonic functions*, 280.

———. *Extensions of Fatou's theorem to tangential asymptotic values*, 289.

32. Several Complex Variables and Analytic Spaces

Myers, Donald E. *An additive decomposition theorem for analytic functions*, 525.

Stoll, Wilhelm. *The construction of a $\bar{\partial}$ -simple covering*, 101.

34. Ordinary Differential Equations

Breuer, Shlomo and Gottlieb, David. *Explicit characterization of spherical curves*, 126.

Bownds, J. M. and Metcalf, F. T. *An extension of the Nagumo uniqueness theorem*, 313.

Etgen, Garret J. *Oscillation criteria for nonlinear second order matrix differential equations*, 259.

Fink, A. M. *Almost periodicity of the inverse of a fundamental matrix*, 527.

Gunderson, R. W. *A comparison lemma for higher order trajectory derivatives*, 543.

Hájek, Otomar. *Parallelizability revisited*, 77.

Kazdan, Jerry L. *Perturbation of complete orthonormal sets and eigenfunction expansions*, 506.

Ladas, G., Lakshmikantham, V. and Leela, S. *On the perturbability of the asymptotic manifold of a perturbed system of differential equations*, 65.

Palis, J. *Ω -explosions*, 85.

*Zettl, Anton. *Factorization of differential operators*, 425.

35. Partial Differential Equations

Allegretto, W. and Swanson, C. A. *Oscillation criteria for elliptic systems*, 325.

Flaschka, Hermann. *An asymptotic property of the roots of polynomials*, 451.

Greenlee, W. M. *On two parameter singular perturbation of linear boundary value problems*, 268.

Nath, B. *A general differential equation for classical polynomials*, 522.

Nelson, Stuart. *L^2 asymptotes for the Klein-Gordon equation*, 110.

42. Fourier Analysis

Bachelis, Gregory F. *On the ideal of unconditionally convergent Fourier series in $L_p(G)$* , 309.

*Doss, Raouf. *Elementary proof of a theorem of Helson*, 418.

*Friedberg, Stephen H. *The Fourier transform is onto only when the group is finite*, 421.

Graham, Colin C. *$M_0(G)$ is not a prime L -ideal of measures*, 557.

*Jodeit, Max, Jr. *A note on Fourier multipliers*, 423.

43. Abstract Harmonic Analysis

Baker, J. W. *Convolution measure algebras with involution*, 91.

44. Integral Transforms, Operational Calculus

*Jodeit, Max, Jr. *A note on Fourier multipliers*, 423.

46. Functional Analysis

Bachelis, Gregory F. *On the ideal of unconditionally convergent Fourier series in $L_p(G)$* , 309.

Dudley, R. M. *Convergence of sequences of distributions*, 531.

Elliot, George A. *Ideal preserving automorphisms of postliminary C^* -algebras*, 107.

- Garling, D. J. H. *Some remarks on injective envelopes*, 503.
- Johnson, G. W. and Skoug, D. L. *An operator valued function space integral: A sequel to Cameron and Storvick's paper*, 514.
- Reeder, John. *On the invertibility of general Wiener-Hopf operators*, 72.
- Tzafriri, L. *Conditional expectations and an isomorphic characterization of L_1 -spaces*, 317.
- Warner, Seth. *Metrizability of locally compact vector spaces*, 511.
- Warren, H. E. *A special basis for $C([0, 1])$* , 495.
- Wong, James C. S. *Topological invariant means on locally compact groups and fixed points*, 572.
- Wong, Pak-Ken. *The Arens product and duality in B^* -algebras. II*, 535.
- 47. Operator Theory**
- Greenlee, W. M. *On two parameter singular perturbation of linear boundary value problems*, 268.
- Herod, J. V. *A product integral representation for an evolution system*, 549.
- Kazdan, Jerry L. *Perturbation of complete orthonormal sets and eigenfunction expansions*, 506.
- Lin, C.-S. *A note on the Kleinecke-Shirokov theorem and the Wintner-Wielandt-Halmos theorem*, 529.
- Prosser, Reese, T. *A comparison theorem for operators with compact resolvent*, 519.
- Tzafriri, L. *Conditional expectations and an isomorphic characterization of L_1 -spaces*, 317.

D. GEOMETRY

- 50. Geometry**
- Stavrakas, Nick M., Hare, W. R. and Kenelly, J. W. *Two cells with N points of local nonconvexity*, 331.
- 52. Convex Sets and Geometric Inequalities**
- *Chen, Bang-yen. *Submanifolds in a euclidean hypersphere*, 627.
- Sparks, Arthur G. *Characterizations of the generalized convex kernel*, 563.
- Stavrakas, Nick M., Hare, W. R. and Kenelly, J. W. *Two cells with N points of local nonconvexity*, 331.
- Zaks, Joseph. *On a conjecture of A. J. Hoffman*, 122.
- 53. Differential Geometry**
- Breuer, Shlomo and Gottlieb, David. *Explicit characterization of spherical curves*, 126.
- *Chen, Bang-yen. *Submanifolds in a euclidean hypersphere*, 627.
- Jonker, L. *A note on a paper of Palais*, 337.
- Sen, R. N. *Correction to a theorem of mine*, 341.

E. LOGIC AND FOUNDATIONS

- 02. Logic and Foundations**
- Greenleaf, Newcomb. *Fields in which varieties have rational points: A note on a problem of Ax*, 139.
- Monk, J. Donald. *Provability with finitely many variables*, 353.
- Phillips, R. G. *On the structure of nonstandard models of arithmetic*, 359.
- Zuckerman, Martin M. *Choices from finite sets and choices of finite subsets*, 133.
- 04. Set Theory**
- Darst, R. B. *C^∞ -functions need not be bimeasurable*, 128.

Darst, R. B., *A characterization of bimeasurable functions in terms of universally measurable sets*, 566.

Hansell, Roger W. *General embedding properties of absolute Borel and Souslin spaces*, 343.

F. STATISTICS AND PROBABILITY

60. Probability Theory and Stochastic Processes

Das, Minaketan. *Real zeros of a random sum of orthogonal polynomials*, 147.

Huff, Barthel W. *Comments on the continuity of distribution functions obtained by superposition*, 141.

Kuelbs, J. *Expansions of vectors in a Banach space related to Gaussian measures*, 364.

G. TOPOLOGY

22. Topological Groups, Lie Groups

Armocost, D. L. *Can an LCA group be anti-self-dual?*, 186.

Carruth, J. H. and Clark, C. E. *Compact totally \mathfrak{K} ordered semigroups*, 199.

Franklin, Lawrence M. *On the nonexistence of slices for p -adic transformation groups*, 183.

Fulp, Ronald O. *Character semigroups of locally compact inverse semigroups*, 613.

Wolf, Joseph A. *A commutativity criterion for closed subgroups of compact Lie groups*, 619.

Wong, James C. S. *Topological invariant means on locally compact groups and fixed points*, 572.

54. General Topology

Bellamy, David P. and Davis, Harvey S. *Continuum neighborhoods and filter-bases*, 371.

Collins, P. J. *Concordant mappings and the concordant-dissonant factorization of an arbitrary continuous function*, 587.

Crawford, Albert L. and Jobe, John. *A characterization of hereditarily indecomposable continua*, 205.

Franklin, Lawrence M. *On the nonexistence of slices for p -adic transformation groups*, 183.

Frolík, Zdeněk. *Stone-Weierstrass theorems for $C(X)$ with the sequential topology*, 486.

Garling, D. J. H. *Some remarks on injective envelopes*, 503.

Gauld, David B. *The canonical Schoenflies theorem*, 603.

Gray, William J. and Vaughan, Loy O. *The almost fixed point property for hereditarily unicoherent continua*, 381.

Hansell, Roger W. *General embedding properties of absolute Borel and Souslin spaces*, 343.

*Henderson, George W. *On the hyperspace of subcontinua of an arc-like continuum*, 416.

Hunt, John H. V. and García-Máynez, Adalberto. *The separation theorem for quasi-closed sets*, 399.

Jackson, Robert E. *Quasi-Jordanian continua*, 387.

Kaul, S. K. *On pointwise periodic transformation groups*, 391.

Kullman, David, E. *Developable spaces and p -spaces*, 154.

Roberson, Fred A. *A theorem on near equicontinuity of transformation groups*, 189.

- Smithson, R. E. *Fixed points for contractive multifunctions*, 192.
- Thron, W. J. and Zimmerman, Susan J. *A characterization of order topologies by means of minimal T_0 -topologies*, 161.
- Vidossich, Giovanni. *Topological characterization of pseudo- \aleph -compact spaces*, 195.
- 55. Algebraic Topology**
- Edelson, Allan L. *Real line bundles on spheres*, 579.
- Gauld, David B. *The canonical Schoenflies theorem*, 603.
- Gross, Jonathan L. *Prime 3-manifolds and the doubling operation*, 375.
- Krueger, Warren M. *Higher order homology operations and the Adams spectral sequence*, 395.
- Landweber, Peter S. *Complex bordism of classifying spaces*, 175.
- 57. Manifolds and Cell Complexes**
- Becker, J. C. and Glover, H. H. *Note on the embedding of manifolds in euclidean space*, 405.
- Bredon, Glen E. *Counterexamples on the rank of a manifold*, 592.
- Brender, Allan. *Inertial and bordism properties of spheres*, 209.
- Connelly, Robert. *A new proof of Brown's collaring theorem*, 180.
- Conrad, Bruce. *Extending free circle actions on spheres to S^3 actions*, 168.
- Evans, E. Graham, Jr. *Projective modules as fiber bundles*, 623.
- Gauld, David B. *The canonical Schoenflies theorem*, 603.
- Holsztyński, W. *Approximation by homeomorphisms and solution of P. Blass problem on pseudo-isotopy*, 598.
- Lacher, R. C. *Suspending homotopy 3-spheres and embedding mapping cylinders in S^4* , 584.
- Schultz, Reinhard. *The nonexistence of free S^1 actions on some homotopy spheres*, 595.
- Segal, D. M. *Divisibility conditions on characteristic numbers of stably symplectic manifolds*, 411.
- Stoll, Wilhelm. *The construction of a $\bar{\partial}$ -simple covering*, 101.
- 58. Global Analysis, Analysis on Manifolds**
- Bredon, Glen E. *Counterexamples on the rank of a manifold*, 592.

RESEARCH AND REVIEW JOURNALS PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY

Bulletin of the American Mathematical Society

The journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, and a department of research announcements.

The current issue of the journal lists editors to whom prospective publications should be addressed. Publication is bimonthly.

Transactions of the American Mathematical Society

This monthly journal is devoted entirely to research in pure and applied mathematics, and includes in general longer papers than the PROCEEDINGS.

The current issue of the journal lists editors to whom prospective publications should be addressed.

Mathematics of Computation

A journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices and other aids to computation. In addition it publishes reviews and notes in these and related fields.

Prospective publications should be addressed to the Editor, Professor Eugene Isaacson, Courant Institute of Mathematical Sciences, New York University, 251 Mercer Street, New York, New York 10012. The author may suggest the name of an editor for review of his paper.

Mathematical Reviews

This journal is devoted to abstracts and reviews of the current mathematical literature of the world. Currently publication is monthly; two volumes are published each year, each volume consisting of 6 regular issues plus an index issue. In each regular issue the abstracts and reviews are grouped under subject headings. Publication began in 1940.

Soviet Mathematics—Doklady

This bimonthly is a translation journal containing the entire pure mathematics section of the DOKLADY AKADEMII NAUK SSSR, the Reports of the Academy of Sciences of the USSR. The DOKLADY for a year contains about 500 articles, each about 4 pages long.

Mathematics of the USSR—Izvestija

This journal is a cover-to-cover translation of IZVESTIJA AKADEMII NAUK SSSR SERIJA MATEMATIČESKAJA, published bimonthly by the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published bimonthly starting with Volume 1, Number 1, January-February, 1967, which corresponds to the Russian original Tom 31, Number 1.

Mathematics of the USSR—Sbornik

This journal is a cover-to-cover translation of MATEMATIČESKIĖ SBORNIK (New Series), published monthly by the Moscow Mathematical Society and the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published monthly starting with Volume 1, Number 1, January 1967, which corresponds to the Russian original Tom 72 (114), No. 1.

Submission of Manuscript

Send papers directly to one of the Editors listed under the subject field of the paper.

Algebra and number theory.

GEORGE B. SELIGMAN, Department of Mathematics, Yale University, New Haven, Connecticut 06520

JOSEPH J. ROTMAN, Mathematics Department, University of Illinois, Urbana, Illinois 61801

Modern or classical analysis.

IRVING GLICKSBERG, Mathematics Department, University of Washington, Seattle, Washington 98105

W. H. J. FUCHS, Department of Mathematics, White Hall, Cornell University, Ithaca, New York 14850

ALLEN SHIELDS, Department of Mathematics, University of Michigan, Ann Arbor, Michigan 48104

Algebraic geometry.

GEORGE B. SELIGMAN, Department of Mathematics, Yale University, New Haven, Connecticut 06520

Set-theoretic and general topology.

ERNEST MICHAEL, Mathematics Department, University of Washington, Seattle, Washington 98105

Algebraic topology and all other types of geometry.

EMERY THOMAS, Mathematics Department, University of California, Berkeley, California 94720

Applied mathematics, differential equations, and related areas of analysis.

FRED BRAUER, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706

Probability, statistics, and related fields.

JOSHUA CHOVER, Mathematics Department, University of Wisconsin, Madison, Wisconsin 53706

Logic, set theory, and related areas.

W. W. BOONE, Mathematics Department, University of Illinois, Urbana, Illinois 61801

All other communications should be addressed to the Managing Editor, W. H. J. FUCHS, at the above address.

Reprints and Address Changes

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P. O. Box 6248, Providence, Rhode Island 02904.

CONTENTS—Continued from back cover

Almost periodicity of the inverse of a fundamental matrix. By A. M. FINK.....	527
A note on the Kleinecke-Shirokov theorem and the Wintner-Wielandt-Halmos theorem. By C.-S. LIN.....	529
Convergence of sequences of distributions. By R. M. DUDLEY.....	531
The Arens product and duality in B^* -algebras. II. By PAK-KEN WONG.....	535
Zero sets of functions from non-quasi-analytic classes. By ROBERT B. HUGHES.....	539
A comparison lemma for higher order trajectory derivatives. By R. W. GUNDERSON.....	543
A product integral representation for an evolution system. By J. V. HEROD.....	549
$M_0(G)$ is not a prime L -ideal of measures. By COLIN C. GRAHAM....	557

D. GEOMETRY

Characterizations of the generalized convex kernel. By ARTHUR G. SPARKS.....	563
--	-----

E. LOGIC AND FOUNDATIONS

A characterization of bimeasurable functions in terms of universally measurable sets. By R. B. DARST.....	566
---	-----

G. TOPOLOGY

Topological invariant means on locally compact groups and fixed points. By JAMES C. S. WONG.....	572
Real line bundles on spheres. By ALLAN L. EDELSON.....	579
Suspending homotopy 3-spheres and embedding mapping cylinders in S^4 . By R. C. LACHER.....	584
Concordant mappings and the concordant-dissonant factorization of an arbitrary continuous function. By P. J. COLLINS.....	587
Counterexamples on the rank of a manifold. By GLEN E. BREDON...	592
The nonexistence of free S^1 actions on some homotopy spheres. By REINHARD SCHULTZ.....	595
Approximation by homeomorphisms and solution of P. Blass problem on pseudo-isotopy. By W. HOLSZTYŃSKI.....	598
The canonical Schoenflies theorem. By DAVID B. GAULD.....	603
Character semigroups of locally compact inverse semigroups. By RONALD O. FULP.....	613
A commutativity criterion for closed subgroups of compact Lie groups. By JOSEPH A. WOLF.....	619
Projective modules as fiber bundles. By E. GRAHAM EVANS, JR.....	623

SHORTER NOTES

Submanifolds in a euclidean hypersphere. By BANG-YEN CHEN.....	627
AMS (MOS) Major Subject Headings (1970).....	629
Index to Volume 27.....	631

CONTENTS*

Vol. 27, No. 3

MARCH, 1971

Whole No. 141

Page

A. ALGEBRA AND THEORY OF NUMBERS

Zero divisors and nilpotent elements in power series rings. By DAVID E. FIELDS.....	427
Hypergraphs and Ramseyian theorems. By V. CHVÁTAL.....	434
Minimal generating sets for free modules. By L. M. BRUNING and W. G. LEAVITT.....	441
The orthomodular identity and metric completeness of the coordinatizing division ring. By RONALD P. MORASH.....	446
On a partition theorem of MacMahon-Andrews. By M. V. SUBBARAO.....	449
An asymptotic property of the roots of polynomials. By HERMANN FLASCHKA.....	451
On the vanishing of Ext. By MARK RAMRAS.....	457
On the Lie algebra of a Burnside group of exponent 5. By EUGENE F. KRAUSE and KENNETH W. WESTON.....	463
Conversion of the permanent into the determinant. By P. M. GIBSON..	471
Semidual functors and quintuples. By ROBERT DAVIS.....	477
Kronecker function rings and flat $D[X]$ -modules. By J. T. ARNOLD and J. W. BREWER.....	483

B. ANALYSIS

Stone-Weierstrass theorems for $C(X)$ with the sequential topology. By ZDENĚK FROLÍK.....	486
A special basis for $C([0, 1])$. By H. E. WARREN.....	495
The univalence of an integral. By W. M. CAUSEY.....	500
Some remarks on injective envelopes. By D. J. H. GARLING.....	503
Perturbation of complete orthonormal sets and eigenfunction expansions. By JERRY L. KAZDAN.....	506
Metrizability of locally compact vector spaces. By SETH WARNER...	511
An operator valued function space integral: A sequel to Cameron and Storvick's paper. By G. W. JOHNSON and D. L. SKOUG.....	514
A comparison theorem for operators with compact resolvent. By REESE T. PROSSER.....	519
A general differential equation for classical polynomials. By B. NATH.....	522
An additive decomposition theorem for analytic functions. By DONALD E. MYERS.....	525

* The volume index will contain a mapping showing the correspondence between sections A-G and the AMS (MOS) subject classification numbers.
