PROCEEDINGS

OF THE

AMERICAN MATHEMATICAL SOCIETY

EDITED BY

FRED G. BRAUER
GLEN E. BREDON
W. WISTAR COMFORT
JACOB FELDMAN
RICHARD R. GOLDBERG
JOSEPH J. ROTMAN
GEORGE B. SELIGMAN

WITH THE COOPERATION OF

THOMAS A. CHAPMAN
RONALD G. DOUGLAS
JAY R. GOLDMAN
JAMES D. KUELBS
BARBARA L. OSOFSKY
ROBERT I. SOARE

Coden: PAMYAR
VOLUME 39
NUMBER 3
PAGES 443–664
AUGUST 1973
WHOLE No. 170

Published by the
AMERICAN MATHEMATICAL SOCIETY
PROVIDENCE, RHODE ISLAND

Proceedings of the American Mathematical Society

THIS JOURNAL is devoted entirely to research in pure and applied mathematics, and the publication of original papers of moderate length. The maximum length of an acceptable paper is about 8 printed pages. Since a page of the PROCEEDINGS contains about 400 words, a rule of thumb is that under 10 typed pages is probably within the limit, but that over 12 typed pages is probably too long.

SHORTER NOTES. Very short notes not to exceed 1 printed page of an unusual nature are also accepted, and appear under the heading SHORTER NOTES. Items deemed suitable include an elegant new proof of an important and well-known theorem, an illuminating example or counterexample, or a new viewpoint on familiar results. New results, if of a brief and striking character, might also be acceptable, though in general a paper which is merely very short will not be suitable for the SHORTER NOTES department.

PREPARATION OF THE MANUSCRIPT. Articles for insertion should be typewritten and double spaced. Ditto is not generally satisfactory, although other modes of multiple reproduction may be. The *Manual for Authors*, available from the Society, should be consulted for symbols and style conventions. Authors should take the greatest possible care in preparing the original manuscript. Hand drawn symbols are satisfactory, if clearly done; directions to the printer should be included where necessary on a separate sheet, not in the accompanying letter. Authors must keep a complete copy of their manuscript, and editors will acknowledge receipt; manuscripts can therefore be sent by ordinary mail and any other kind (registered, certified) is entirely unnecessary. Submission of two copies of the manuscript is desirable.

FORM OF MANUSCRIPT. The first page should consist of a *descriptive title*, followed by an *abstract* which summarizes the article in language suitable for workers in the general field (algebra, analysis, etc.). The *descriptive title* should be short, but informative; useless or vague phrases such as "some remarks about" or "concerning" should be avoided. Also avoid proper names unless mathematical usage associates them with the work. The *abstract* should be at least one complete sentence, and at most 150 words. Included with the footnotes to the paper, but placed before the first footnote, there should be first the AMS (MOS) *subject classification numbers* representing the primary and secondary subjects of the article. This may be followed by a list of *key words and phrases* describing the subject matter of the article and taken from it. The AMS (MOS) Subject Classification Scheme (1970) with instructions for its use can be found as an appendix to Mathematical Reviews, Index to Volume 39 (June 1970). See the June 1970 Notices for more details, as well as illustrative examples.

SUBMISSION OF MANUSCRIPTS, REPRINTS AND ADDRESS CHANGES. See the last page of this issue.

GALLEY PROOF. When a paper with more than one author has been accepted for publication, only one set of galley proof will be sent. Joint authors should, therefore, indicate which of them should receive galley proof in the event that the manuscript is accepted for publication.

BACKLOG. NONE. Two-thirds of the papers currently being received by the editors will be published in 8–11 months.

SUBSCRIPTION INFORMATION. Five volumes are planned for 1973; the subscription price is $100. Back number prices are as follows: Volumes 1–16, $14 per volume, Volumes 17–19, $18 per volume; Volumes 20–26, $30 per volume; Volumes 27–30, $27 per volume; Volumes 31–39, $30 per volume.

THE PROCEEDINGS OF THE AMERICAN MATHEMATICAL SOCIETY is published monthly. Subscriptions, orders for back numbers and inquiries in regard to nondelivery of current numbers should be addressed to the American Mathematical Society, P.O. Box 6248, Providence, R.I. 02904.
Second-class postage paid at Providence, Rhode Island, and additional mailing offices.

INDEX TO VOLUME 39

SUBJECT INDEX

*Starred items are "Shorter Notes"

A. Algebra and Number Theory

05. Combinatorics

Greene, Curtis. *A multiple exchange property for bases*, 45.

Manaster, Alfred B. and Rosenstein, Joseph G. *Effective matchmaking and k-chromatic graphs*, 371.

06. Order, Lattices, Ordered Algebraic Structures

Bleir, Roger D. *Archimedean vector lattices generated by two elements*, 1.

DeMarr, Ralph. *A class of partially ordered linear algebras*, 255.

10. Number Theory

Burr, Stefan A. *On uniform elementary estimates of arithmetic sums*, 497.

Cahn, Robert S. *Lattice sums of homogeneous functions*, 252

Chang, Chan-nan. *The Brauer group of an Amitsur field*, 493.

Choi, S. L. G. *The largest sum-free subsequence from a sequence of n numbers*, 42.

Diamond, Harold G. *Chebyshev estimates for Beurling generalized prime numbers*, 503.

Diananda, P. H. *The Schnirelmann density of the* $(k, 2)$*-integers*, 462.

Galambos, Janos. *Approximation of arithmetical functions by additive ones*, 19.

Hsia, J. S. *On the Hasse principle for quadratic forms*, 468.

Miklavc, Adolf. *Elementary proof of two theorems on the distribution of numbers* $n\theta \pmod 1$, 279.

*Mohanty, S. P. *A note on Mordell's equation* $y^2=x^3+k$, 645.

Segal, Sanford L. *Erratum to "On convolutions with the Möbius function"*, 652.

Woods, A. C. *On a problem of Mahler in the geometry of numbers*, 86.

12. Algebraic Number Theory, Field Theory and Polynomials

Cain, Bryan E. *A two-color theorem for analytic maps in* $\boldsymbol{R}^n$, 261

Podewski, Klaus-Peter. *The number of field topologies on countable fields*, 33.

———. *Transcendental extensions of field topologies on countable fields*, 39.

13. Commutative Rings and Algebras

Dobbs, David E. *On going down for simple overrings*, 515.

McCarthy, P. J. *The ring of polynomials over a von Neumann regular ring*, 253.

Magid, Andy R. *A van Kampen theorem for separable algebras*, 483.

———. *K-theory of commutative regular rings*, 489.

Moen, Selmer. *Free derivation modules and a criterion for regularity*, 221.

Ratliff, L. J., Jr. *Conditions for* $\operatorname{Ker}(R[X]\to R[c/b])$, 509.

Walters, Charles M. *An extension of Dedekind's linear independence theorem*, 73.

14. Algebraic Geometry

Draper, Richard. *A case in which irreducibility of an analytic germ implies irreducibility of the tangent cone*, 443.

15. Linear and Multilinear Algebra; Matrix Theory (finite and infinite)

Greene, Curtis. *A multiple exchange property for bases*, 45.

Hartfiel, D. J. *A lower bound on the permanent of a* $(0, 1)$*-matrix*, 83.

Hsia, J. S. *On the Hasse principle for quadratic forms*, 468.
Kahan, W. *Every $n \times n$ matrix Z with real spectrum satisfies $\|Z-Z^*\| \leqq \|Z+Z^*\| (\log_2 n+0.038)$*, 235.
Plemmons, R. J. and Cline, R. E. *Erratum to "The generalized inverse of a nonnegative matrix"*, 651.

16. Associative Rings and Algebras

Armendariz, E. P. and Fisher, Joe W. *Regular P.I.-rings*, 247.
Beauregard, Raymond A. *Chain type decomposition in integral domains*, 77.
Fisher, Joe W. *Structure of semiprime P.I. rings*, 465.
Janeski, John and Weissglass, Julian. *Regularity of semilattice sums of rings*, 479
McCarthy, P. J. *The ring of polynomials over a von Neumann regular ring*, 253.
Putcha, Mohan S. and Yaqub, Adil. *Rings satisfying monomial constraints*, 10.
Stewart, Patrick N. *Strict radical classes of associative rings*, 273.
Weissglass, Julian. *Semigroup rings and semilattice sums of rings*, 471.

17. Nonassociative Rings and Algebras

Coughlin, Raymond, Kleinfeld, Erwin and Rich, Michael. *Scalar dependent algebras*, 69.
Smith, Harry F. *Prime generalized alternative rings I with nontrivial idempotent*, 242.

18. Category Theory, Homological Algebra

Ramaurthi, V. S. *On splitting cotorsion radicals*, 457.

20. Group Theory and Generalizations

Bachmuth, S., Mochizuki, H. Y. and Weston, K. *A group of exponent* 4 *with derived length at least* 4, 228.
Janeski, John and Weissglass, Julian. *Regularity of semilattice sums of rings*, 479.
Jones, Michael R. *Some inequalities for the multiplicator of a finite group*, 450.
Lyndon, Roger C. and Newman, Morris. *Commutators as products of squares*, 267.
Narayana Rao, M. L. *A class of flag transitive planes*, 51.
Parshall, Brian. *Regular elements in algebraic groups of prime characteristic*, 57.
Plemmons, Robert J. *Regular nonnegative matrices*, 26.
Snapper, Ernst. *Counting p-subgroups*, 81.
Weissglass, Julian. *Semigroup rings and semilattice sums of rings*, 471.
Wickless, W. and Vinsonhaler, C. *A note on torsion-free abelian groups of finite rank*, 63.

B. Analysis

26. Real functions

Andersen, Kenneth F. *On Hardy's inequality and Laplace transforms in weighted rearrangement invariant spaces*, 295.
Eidswick, J. A. *On some fundamental problems in cluster set theory*, 163.
Helton, Jon C. *An existence theorem for sum and product integrals*, 149.
———. *Product integrals and exponentials in commutative Banach algebras*, 155.
Hughes, R. B. *Erratum to "Zero sets of functions from non-quasi-analytic classes"*, 651.
Lind, D. A. *Convolutions and absolute continuity*, 347.
Loeb, Peter A. *A combinatorial analog of Lyapunov's theorem for infinitesimally generated atomic vector measures*, 585.
Mauldin, R. Daniel. *On Borel measures and Baire's class* 3, 308.
Scanlon, C. H. *Additivity and indefinite integration for McShane's P-integral*, 129.
Smith, Bruce D. *An alternate characterization of continuity*, 318.

28. Measure and Integration

Helton, Jon C. *Product integrals and exponentials in commutative Banach algebras*, 155.

Lind, D. A. *Convolutions and absolute continuity*, 347.

Loeb, Peter A. *A combinatorial analog of Lyapunov's theorem for infinitesimally generated atomic vector measures*, 585.

Mauldin, R. Daniel. *On Borel measures and Baire's class* 3, 308.

30. Functions of a Complex Variable

Al-Amiri, Hassoon S. *On the radius of β-convexity of starlike functions of order α*, 101.

Beller, E. and Newman, D. J. *An extremal problem for the geometric mean of polynomials*, 313.

Caplinger, T. R. and Causey, W. M. *A class of univalent functions*, 357.

*Henderson, George W. and Ummel, Brian R. *The nonexistence of complex Haar systems on nonplanar locally connected spaces*, 640.

Metzger, Thomas A. *On the growth of the Taylor coefficients of automorphic forms*, 321.

Mocanu, Petru T., Reade, Maxwell O. and Złotkiewicz, Eligiusz J. *On Bazilevič functions*, 173.

Quine, J. R. *On the self-intersections of the image of the unit circle under a polynomial mapping*, 135.

Shaffer, Dorothy Browne. *Distortion theorems for a special class of analytic functions*, 281

Shaw, J. K. *On coefficients and zeros of sections of power series*, 567.

Warren, H. E. *L-analytic mappings in the disk algebra*, 110.

31. Potential Theory.

Ching, Chin-hung and Chui, Charles K. *A representation formula for harmonic functions*, 349.

Davis, Burgess and Lewis, John L. *An extremal property of some capacitary measures in E_n*, 520.

32. Several Complex Variables and Analytic Spaces

Becker, Joseph. *C^k, weakly holomorphic functions on analytic sets*, 89.

Chen, Su-shing. *Carathédory distance and convexity with respect to bounded holomorphic functions*, 305.

Draper, Richard. *A case in which irreducibility of an analytic germ implies irreducibility of the tangent cone*, 443.

34. Ordinary Differential Equations

Bownds, John M. *Stability implications on the asymptotic behavior of second order differential equations*, 169.

Clark, David C. *On periodic solutions of autonomous Hamiltonian systems of ordinary differential equations*, 579.

*Kroopnick, Allan. *L^2-solutions to $y''+c(t)y'+a(t)b(y)=0$*, 217.

35. Partial Differential Equations

Conway, E. D. and Smoller, J. A. *Shocks violating Lax's condition are unstable*, 353.

Kukral, Dean K. *On a Bergman-Whittaker type operator in five or more variables*, 122.

Lo, Chi Yeung. *Dirichlet problems for singular elliptic equations*, 337.

Newberger, E. and Zielezny, Z. *The growth of hypoelliptic polynomials and Gevrey classes*, 547.

Sarason, Leonard. *Weak equals strong for first order linear pseudodifferential boundary value problems*, 141.

39. Finite Differences and Functional Equations

Ng, C. T. *Local boundedness and continuity for a functional equation on topological spaces*, 525.

40. Sequences, Series, Summability.

*Rudin, Walter. *A very slowly convergent sequence of continuous functions*, 647.

41. Approximations and Expansions

*Henderson, George W. and Ummel, Brian R. *The nonexistence of complex Haar systems on nonplanar locally connected spaces*, 640.

Lew, John S. *Asymptotic inversion of Laplace transforms: A class of counter-examples*, 329.

Rozema, Edward. *Almost Chebyshev subspaces, lower semicontinuity, and Hahn-Banach extensions*, 117.

*Rudin, Walter. *A very slowly convergent sequence of continuous functions*, 647.

42. Fourier Analysis

Beller, E. and Newman, D. J. *An extremal problem for the geometric mean of polynomials*, 313.

Schwartz, Alan L. *Corrections and additions to "On the ideal structure of the algebra of radial functions"*, 288.

44. Integral Transforms, Operational Calculus

Andersen, Kenneth F. *On Hardy's inequality and Laplace transforms in weighted rearrangement invariant spaces*, 295.

Lew, John S. *Asymptotic inversion of Laplace transforms: A class of counter-examples*, 329.

Schwartz, Alan L. *Corrections and additions to "On the ideal structure of the algebra of radial functions"*, 288.

46. Functional Analysis

Andalafte, E. Z. and Valentine, J. E. *Criteria for unique metric lines in Banach spaces*, 367.

Andersen, Kenneth F. *On Hardy's inequality and Laplace transforms in weighted rearrangement invariant spaces*, 295.

Chalice, Donald R. *S-algebras on sets in C^n*, 300.

Cho, T. and Tong, A. *A note on the Radon-Nikodym theorem*, 530.

Chou, Ching and Duran, J. Peter. *Multipliers for the space of almost-convergent functions on a semigroup*, 125.

*Edgar, G. A. *Two function-space topologies*, 219.

Halpern, Herbert. *Primitive ideals in von Neumann algebras*, 563.

Helton, Jon C. *An existence theorem for sum and product integrals*, 149.

———. *Product integrals and exponentials in commutative Banach algebras*, 155.

Holub, J. R. *Reflexivity of $L(E, F)$*, 175.

Loeb, Peter A. *A combinatorial analog of Lyapunov's theorem for infinitesimally generated atomic vector measures*, 585.

O'Farrell, Anthony G. *An isolated bounded point derivation*, 559.

Radin, Charles, *Automorphisms of von Neumann algebras as point transformations*, 343.

47. Operator Theory

Goodman, Roe. *On the boundedness and unboundedness of certain convolution operators on nilpotent Lie groups*, 409.

Hess, Peter. *On a unilateral problem associated with elliptic operators*, 94.

Kahan, W. *Every $n \times n$ matrix Z with real spectrum satisfies $\|Z-Z^*\| \leqq \|Z+Z^*\|$ $(\log_2 n+0.038)$*, 235.

Kauffman, Robert M. *Two types of hyperinvariant subspaces*, 553.

Olsen, Catherine L. *A characterization of thin operators in a von Neumann algebra*, 571.

Sato, Ryotaro. *Ergodic properties of bounded L_1-operators*, 540.

49. Calculus of Variations and Optimal Control

Nehari, Zeev. *Sufficient conditions in the calculus of variations and in the theory of optimal control*, 535.

C. Applied Mathematics

93. Systems, Control

Nehari, Zeev. *Sufficient conditions in the calculus of variations and in the theory of optimal control*, 535.

D. Geometry

50. Geometry

Narayana Rao, M. L. *A class of flag transitive planes*, 51.

52. Convex Sets and Geometric Inequalities

Andalafte, E. Z. and Valentine, J. E. *Criteria for unique metric lines in Banach spaces*, 367.

Breen, Marilyn. *Intersecting unions of maximal convex sets*, 587.

53. Differential Geometry

Cowen, Michael J. *Families of negatively curved hermitian manifolds*, 362.

*Weinstein, Alan. *Distance spheres in complex projective spaces*, 649.

E. Logic and Foundations

02. Logic and Foundations

Manaster, Alfred B. and Rosenstein, Joseph G. *Effective matchmaking and k-chromatic graphs*, 371.

Myhill, J. *A note on indicator-functions*, 181.

Parikh, Rohit. *A note on paths through O*, 178.

Saracino, D. *Model companions for $\aleph_0$-categorical theories*, 591.

04. Set Theory

Hansell, R. W. *On the representation of nonseparable analytic sets*, 402.

F. Statistics and Probability

60. Probability Theory and Stochastic Processes

*Allen, G. D. *An extension of Kolmorgorov's theorem for continuous covariances*, 214.

Mukherjea, A., Sun, T. C. and Tserpes, N. A. *Random walks on compact semigroups*, 599.

Samal, G. and Mishra, M. N. *On the lower bound of the number of real roots of a random algebraic equation with infinite variance*. III, 184.

G. Topology

22. Topological Groups, Lie Groups

Goodman, Roe. *On the boundedness and unboundedness of certain convolution operators on nilpotent Lie groups*, 409.

54. General Topology

Baildon, John D. *Open simple maps and periodic homeomorphisms*, 433.

Bellamy, David P. and Rubin, Leonard R. *Indecomposable continua in Stone-Čech compactifications*, 427.

Bennett, Ralph. *Peripherally compact tree-like spaces are continuum-wise connected*, 441.

Broughan, K. A. *A metric characterizing Čech dimension zero*, 437.

Choe, Tae Ho. *Projective compact distributive topological lattices*, 606.

Dickman, R. F., Jr. *Regular closed maps*, 414.

Eaton, W. T. *A generalization of the dog bone space to E^n*, 379.

Fox, Geoffrey and Morales, Pedro. *A non-Hausdorff Ascoli theorem for k_3-spaces*, 633.

Hagopian, Charles L. *Planar λ connected continua*, 190.

Hansell, R. W. *On the representation of nonseparable analytic sets*, 402.

Richardson, G. D. *Completions for a class of convergence groups*, 211.

Smith, Bruce D. *An alternate characterization of continuity*, 318.

Yang, J. S. *Transformation groups of automorphisms of $C(X, G)$*, 619.

55. Algebraic Topology

Johnson, David Copeland. *On the reduction of complex bordism to unoriented bordism*, 417.

Kozma, Ilan. *Some relations between semigroups of polyhedra*, 388.

Krueger, Warren M. *Generalized Steenrod-Hopf invariants for stable homotopy theory*, 609.

RESEARCH AND REVIEW JOURNALS PUBLISHED BY THE AMERICAN MATHEMATICAL SOCIETY

Bulletin of the American Mathematical Society

This journal is the official organ of the Society. It reports official acts of the Society and the details of its meetings. It contains some of the officially invited addresses presented before the Society, reviews of advanced mathematical books, and a department of research announcements.

The current issue of the journal lists editors to whom prospective publications should be addressed. Publication is bimonthly.

Transactions of the American Mathematical Society

This monthly journal is devoted entirely to research in pure and applied mathematics, and includes in general longer papers than those in the PROCEEDINGS.

The current issue of the journal lists editors to whom prospective publications should be addressed.

Mathematics of Computation

A journal devoted to original papers in numerical analysis, the application of numerical methods and high-speed calculator devices, the computation of mathematical tables, the theory of high-speed calculating devices and other aids to computation. In addition it publishes reviews and notes in these and related fields.

Prospective publications should be addressed to the Editor, Professor Eugene Isaacson, Courant Institute of Mathematical Sciences, New York University, 251 Mercer Street, New York, New York 10012. The author may suggest the name of an editor for review of his paper.

Mathematical Reviews

This journal is devoted to abstracts and reviews of the current mathematical literature of the world. Currently publication is monthly; two volumes are published each year, each volume consisting of 6 regular issues plus an index issue. In each regular issue the abstracts and reviews are grouped under subject headings. Publication began in 1940.

Soviet Mathematics—Doklady

This bimonthly is a translation journal containing the entire pure mathematics section of the DOKLADY AKADEMII NAUK SSSR, the Reports of the Academy of Sciences of the USSR. The DOKLADY for a year contains about 500 articles, each about 4 pages long.

Mathematics of the USSR—Izvestija

This journal is a cover-to-cover translation of IZVESTIJA AKADEMII NAUK SSSR SERIJA MATEMATIČESKAJA, published bimonthly by the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published bimonthly starting with Volume 1, Number 1, January–February 1967.

Mathematics of the USSR—Sbornik

This journal is a cover-to-cover translation of MATEMATIČESKIĬ SBORNIK (New Series), published monthly by the Moscow Mathematical Society and the Academy of Sciences of the USSR. It is a journal of current research in all fields of pure mathematics. The translation is published monthly starting with Volume 1, Number 1, January 1967.

Submission of Manuscript

Send papers directly to one of the editors listed under the subject field of the paper.

Algebra and algebraic number theory.

BARBARA L. OSOFSKY, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903

JOSEPH J. ROTMAN, Department of Mathematics, University of Illinois, Urbana, Illinois 61801

GEORGE B. SELIGMAN, Department of Mathematics, Yale University, New Haven, Connecticut 06520

Modern or classical analysis and analytic number theory.

RONALD G. DOUGLAS, Department of Mathematics, State University of New York, Stony Brook, New York 11790

JACOB FELDMAN, Department of Mathematics, University of California, Berkeley, California 94720

RICHARD R. GOLDBERG, Department of Mathematics, University of Iowa, Iowa City, Iowa 52240

Algebraic geometry.

GEORGE B. SELIGMAN, Department of Mathematics, Yale University, New Haven, Connecticut 06520

Set-theoretic and general topology.

THOMAS A. CHAPMAN, Department of Mathematics, University of Kentucky, Lexington, Kentucky, 40506

W. WISTAR COMFORT, Department of Mathematics, Wesleyan University, Middletown, Connecticut 06457

Algebraic topology and all other types of geometry.

GLEN E. BREDON, Department of Mathematics, Rutgers University, New Brunswick, New Jersey 08903

Applied mathematics, differential equations, and related areas of analysis.

FRED G. BRAUER, Department of Mathematics, University of Wisconsin, Madison, Wisconsin 53706

Probability, statistics, and related fields.

JAMES D. KUELBS, Department of Mathematics, 213 Van Vleck Hall, University of Wisconsin, Madison, Wisconsin 53706

Logic, set theory, and related areas.

ROBERT I. SOARE, Department of Mathematics, University of Illinois at Chicago Circle, Chicago, Illinois 60680

Combinatorics and related areas of discrete mathematics.

JAY R. GOLDMAN, School of Mathematics, University of Minnesota, Minneapolis, Minnesota 55455

All other communications should be addressed to the Managing Editor, JOSEPH J. ROTMAN, at the above address.

Reprints and Address Changes

Any inquiries concerning a paper which has been accepted for publication, including information regarding reprints or changes of address for mailing proof, should be sent directly to the Editorial Department, American Mathematical Society, P.O. Box 6248, Providence, Rhode Island 02904.

CONTENTS—*Continued from back cover*

E. LOGIC AND FOUNDATIONS

Model companions for $\aleph_0$-categorical theories. By D. SARACINO 591

F. STATISTICS AND PROBABILITY

Random walks on compact semigroups. By A. MUKHERJEA, T. C. SUN and N. A. TSERPES 599

G. TOPOLOGY

Projective compact distributive topological lattices. By TAE HO CHOE 606
Generalized Steenrod-Hopf invariants for stable homotopy theory. By WARREN M. KRUEGER 609
Spheres which are loop spaces mod p. By CLARENCE WILKERSON 616
Transformation groups of automorphisms of $C(X, G)$. By J. S. YANG 619
Halving the Milnor manifolds and some conjectures of Ray. By DAVID M. SEGAL 625
Cohomology of fibre spaces with group bundle coefficients. By M. V. MIELKE .. 629
A non-Hausdorff Ascoli theorem for k_3-spaces. By GEOFFREY FOX and PEDRO MORALES 633
Cohomology of a bounding manifold. By LARRY SMITH and R. E. STONG 637

SHORTER NOTES

The nonexistence of complex Haar systems on nonplanar locally connected spaces. By GEORGE W. HENDERSON and BRIAN R. UMMEL 640
An elementary proof of the Morse-Palais lemma for Banach spaces. By DANG DINH ANG and VU TRONG TUAN 642
A note on Mordell's equation $y^2=x^3+k$. By S. P. MOHANTY 645
A very slowly convergent sequence of continuous functions. By WALTER RUDIN. 647
Distance spheres in complex projective spaces. By ALAN WEINSTEIN 649
Erratum to Volume 27 651
Erratum to Volume 31 651
Erratum to Volume 34 652
AMS (MOS) Major Subject Headings (1970) 653
Index to Volume 39 655

CONTENTS*

Vol. 39, No. 3 AUGUST 1973 Whole No. 170

Page

A. Algebra and Number Theory

A case in which irreducibility of an analytic germ implies irreducibility of the tangent cone. By Richard Draper 443
Some inequalities for the multiplicator of a finite group. By Michael R. Jones . 450
On splitting cotorsion radicals. By V. S. Ramamurthi 457
The Schnirelmann density of the $(k, 2)$-integers. By P. H. Diananda 462
Structure of semiprime P. I. rings. By Joe W. Fisher 465
On the Hasse principle for quadratic forms. By J. S. Hsia 468
Semigroup rings and semilattice sums of rings. By Julian Weissglass 471
Regularity of semilattice sums of rings. By John Janeski and Julian Weissglass 479
A van Kampen theorem for separable algebras. By Andy R. Magid..... 483
K-theory of commutative regular rings. By Andy R. Magid 489
The Brauer group of an Amitsur field. By Chan-nan Chang 493
On uniform elementary estimates of arithmetic sums. By Stefan A. Burr 497
Chebyshev estimates for Beurling generalized prime numbers. By Harold G. Diamond 503
Conditions for $\mathrm{Ker}(R[X]\to R[c/b])$ to have a linear base. By L. J. Ratliff, Jr. . 509
On going down for simple overrings. By David E. Dobbs 515

B. Analysis

An extremal property of some capacitary measures in E_n. By Burgess Davis and John L. Lewis 520
Local boundedness and continuity for a functional equation on topological spaces. By C. T. Ng 525
A note on the Radon-Nikodym theorem. By T. Cho and A. Tong 530
Sufficient conditions in the calculus of variations and in the theory of optimal control. By Zeev Nehari 535
Ergodic properties of bounded L_1-operators. By Ryotaro Sato 540
The growth of hypoelliptic polynomials and Gevrey classes. By E. Newberger and Z. Zielezny 547
Two types of hyperinvariant subspaces. By Robert M. Kauffman 553
An isolated bounded point derivation. By Anthony G. O'Farrell 559
Primitive ideals in von Neumann algebras. By Herbert Halpern 563
On coefficients and zeros of sections of power series. By J. K. Shaw 567
A characterization of thin operators in a von Neumann algebra. By Catherine L. Olsen 571
On periodic solutions of autonomous Hamiltonian systems of ordinary differential equations. By David C. Clark 579
A combinatorial analog of Lyapunov's theorem for infinitesimally generated atomic vector measures. By Peter A. Loeb 585

D. Geometry

Intersecting unions of maximal convex sets. By Marilyn Breen 587

* The volume index will contain a mapping showing the correspondence between sections A–G and the AMS (MOS) subject classification numbers.
