

Acknowledgments. The research of G. Kresin was supported by the KAMEA program of the Ministry of Absorption, State of Israel, and by the Ariel University Center of Samaria. The work of V. Maz'ya was supported by the Linköping University, University of Liverpool, and the Ohio State University. The authors express their thanks to these institutions.

We cordially thank professor Tatiana O. Shaposhnikova who not only took the burden of translation of our Russian manuscript, but also corrected numerous misprints and suggested a number of improvements of presentation.
